AP-202 Reliable Exam Practice - Fresh AP-202 Dumps

Getting certified is a surefire way to advance your career in the IT industry. Nowadays, Salesforce AP-202 certification has been one of the hottest exams which many IT candidates chased after. While how to pass the AP-202 exam test in an efficient way is another question for all of you. I think our Exam4Labs AP-202 will do some help. The high hit rate can ensure you 100% pass. The regular updates of the AP-202 study material can keep you one step ahead in the real exam. The comprehensive questions with the accurate answers will help you have a good knowledge of the actual test and assist you pass with ease.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q83-Q88):

NEW QUESTION # 83

A developer is debugging a flow and needs to watch all the variables changing as the checkout process is executed, but nothing is displaying. Which two features did the developer forget to enable?

- A. Run the latest version of each flow called by subtle w elements
- B. Set up a debug tog to show the details of what is executed
- C. Show the details of what is executed and render flow in Lightning Experience.
- D. Show the details of what is executed and render flow in Lightning Runtime

Answer: C,D

Explanation:

To debug a flow and watch all the variables changing as the checkout process is executed, the developer needs to enable two features: show the details of what is executed and render flow in either Lightning Runtime or Lightning Experience. These features are available in the debug options in Flow Builder, and they allow the developer to see real-time details of the flow actions, inputs,

outputs, and outcomes in a panel on the right. The developer can also set input variables, restart the flow, and convert the debug run to a test. Option A is incorrect because there is no such thing as a debug tog in Flow Builder. Option C is incorrect because running the latest version of each flow called by subflow elements is not a feature that the developer can enable or disable, but rather a default behavior of Flow Builder. Debug a Flow in Flow Builder, B2B Commerce Checkout Flow (Aura), B2B Commerce Checkout Flow Core Actions

NEW QUESTION # 84

Numerous flags ... have a direct impact on the result set provided by the Global API's. What Global API Data-Sizing convention flag prevents an API request from propagating to further requests when provided as a Boolean parameter with a value of true?

- A. `ccrz.ccAPI.SZ_REL`
- B. `ccrz.ccAPISizing.REL`
- C. `ccrz.ccAPISizing.ASSC`
- D. `ccrz.ccAPI.SZ_ASSC`

Answer: D

Explanation:

The Global API Data-Sizing convention flag that prevents an API request from propagating to further requests when provided as a Boolean parameter with a value of true is `ccrz.ccAPI.SZ_ASSC`. This flag indicates that only one API request should be executed with the specified sizing block, and any subsequent requests should use their own default sizing blocks. For example, `ccrz.ccServiceCart.getCart(ccrz.ccAPI.SZ_L,true)` will use the `SZ_L` sizing block for retrieving the cart data, but any other requests that are triggered by this method will use their own default sizing blocks. Salesforce B2B Commerce and D2C Commerce Developer Guide, Data Sizing Conventions

NEW QUESTION # 85

Which two different types of services do Salesforce B2B

- A. Hook services which are extension points for subscribers to tie into.
- B. Data services which are responsible for querying and transforming data from entities
- C. Commerce APIs leverage? (2 answers) A) Logic services which are responsible for implementing business logic associated with entities.
- D. Global services which are responsible for querying and transforming data from entities

Answer: B,C

Explanation:

Two different types of services that Salesforce B2B Commerce APIs leverage are:

Logic services which are responsible for implementing business logic associated with entities. These services are defined in the logic classes, such as `ccrz.ccLogicCart`, `ccrz.ccLogicOrder`, or `ccrz.ccLogicProduct`. These classes provide methods for validating inputs, performing calculations, applying rules, or updating data for each entity.

Data services which are responsible for querying and transforming data from entities. These services are defined in the service classes, such as `ccrz.ccServiceCart`, `ccrz.ccServiceOrder`, or `ccrz.ccServiceProduct`. These classes provide methods for creating, reading, updating, and deleting data for each entity. Salesforce B2B Commerce and D2C Commerce Developer Guide, Service Classes, Logic Classes

NEW QUESTION # 86

Which two guidelines should a developer consider when migrating aura components to LWC?

- A. Start with migrating trees of components (components within components)
- B. Migrate one component and then determine whether additional effort would make sense
- C. Force all developers to write any new components using Lightning web components
- D. Start with simple components that only render UI

Answer: B,D

Explanation:

When migrating aura components to LWC, a developer should consider two guidelines: migrate one component and then determine

whether additional effort would make sense and start with simple components that only render UI. Migrating one component and then determining whether additional effort would make sense allows the developer to evaluate the benefits and costs of migration and decide whether to continue or stop. Migrating simple components that only render UI allows the developer to leverage the performance and modern features of LWC without much complexity or dependency on other components or services. Starting with migrating trees of components (components within components) is not a good guideline, as it can introduce more challenges and dependencies that can complicate the migration process. Forcing all developers to write any new components using Lightning web components is not a good guideline either, as it can create inconsistency and confusion among developers and users. Salesforce [Lightning Web Components Developer Guide: Migrate Aura Components to Lightning Web Components], [Lightning Web Components Developer Guide: Migration Considerations]

NEW QUESTION # 87

Northern Trail Outfitters (NTO) has acquired a company and is looking to manage product data across the org seamlessly. The company has a governance policy to not install any tool or use third-party API applications to export or import the data into Salesforce. However, users have access to Salesforce CLI.

Which set of tasks must a developer perform when to export data from Salesforce or import data into Salesforce?

- A. `sfdx force:tree:data:export -q "SELECT Id, Name FROM Product2" -u <your username>` and
- B. `sfdx force:data:bulk:export -Product2 -all 0` and
- C. `sfdx force:data:tree:export -q "SELECT Id, Name FROM Product2" -u "<your username>"` and `sfdx force:data:tree:import -f Product2.json -u w<your username>"`
- D. `sfdx force:data;tree:export -Product2 -all q` and

Answer: C

Explanation:

The correct answer for how to export data from Salesforce or import data into Salesforce using Salesforce CLI commands is running a command like: `sfdx force:data:tree:export -q "SELECT Id, Name FROM Product2" -u "<your username>"` and `sfdx force:data:tree:import -f Product2.json -u "<your username>"`. The `sfdx force:data:tree:export` command is a Salesforce CLI command that exports data from an org into JSON files that conform to the SOBJect Tree API specification. The SOBJect Tree API specification is a format that defines how records are represented in JSON files for data import or export. The `-q` flag specifies the SOQL query that selects the records and fields to be exported. The `-u` flag specifies the username or alias of the org where the data will be exported from. Running this command will generate JSON files that contain the data from the org based on the SOQL query. The `sfdx force:data:tree:import` command is a Salesforce CLI command that imports data into an org using JSON files that conform to the SOBJect Tree API specification. The `-f` flag specifies the path of the JSON file that contains the data to be imported. The `-u` flag specifies the username or alias of the org where the data will be imported to. Running this command will create records in the org based on the data in the JSON file. Running a command like: `sfdx force:data:bulk:export -Product2 -all 0` and `sfdx force:data:bulk:import -f Product2.json -all` is not a correct answer, as it uses invalid syntax and flags for the `sfdx force:data:bulk:export` and `sfdx force:data:bulk:import` commands. The correct syntax and flags for these commands are `sfdx force:data:bulk:upsert -s Product2 -f Product2.csv -w 10 -u <your username>` and `sfdx force:data:bulk:status -i <job ID> -u <your username>`. Running a command like: `sfdx force:data;tree:export -Product2 -all q` and `sfdx force:data:tree:import -f Product2.json -all` is not a correct answer either, as it uses invalid syntax and flags for the `sfdx force:data:tree:export` and `sfdx force:data:tree:import` commands. The correct syntax and flags for these commands are `sfdx force:data:tree:export -q "SELECT Id, Name FROM Product2" -u <your username>` and `sfdx force:data:tree:import -f Product2.json -u <your username>`. Running a command like: `sfdx force:tree:data:export -q "SELECT Id, Name FROM Product2" -u <your username>` and `sfdx force:tree:data:import -f Product2.json -all` is not a correct answer either, as there is no such command as `sfdx force:tree:data:export` or `sfdx force:tree:data:import`. The correct commands are `sfdx force:data:tree:export` and `sfdx force:data:tree:import`. Salesforce [Salesforce CLI Command `force:data:tree:export`], [Salesforce CLI Command `force:data:tree:import`], [Salesforce CLI Command `force:data:bulk`], [Salesforce Developer Tools for Visual Studio Code]

NEW QUESTION # 88

.....

In order to make you have a deeper understanding of what you are going to buy, we offer you free demo for AP-202 training materials. We recommend you have a try before buying. If you are quite content with the AP-202 training materials, just add them into your cart and pay for them. You will get the downloading link and password and you can start your learning right now. In addition, we have online and offline chat service stuff who possess the professional knowledge of the AP-202 Exam Dumps, if you have any questions, just contact us.

AP-202 Reliable Exam Practice: <https://www.exam4labs.com/AP-202-practice-torrent.html>

Salesforce AP-202 Latest Test Camp Many people do not like to study and think that learning is a very vexing thing, The Channel Partner Program AP-202 B2B Commerce for Developers Accredited Professional practice test questions offered by the Exam4Labs are designed and verified by experienced AP-202 B2B Commerce for Developers Accredited Professional certification exam trainers, If there is any renewal about AP-202 dumps PDF materials, the customers will receive it in the mail boxes as we will send it to them automatically.

You are expected to have knowledge of and experience with the following: AP-202 Active Directory, Simple, Secure, Supported li, Many people do not like to study and think that learning is a very vexing thing.

Professional AP-202 Latest Test Camp - 100% Pass AP-202 Exam

The Channel Partner Program AP-202 B2B Commerce for Developers Accredited Professional practice test questions offered by the Exam4Labs are designed and verified by experienced AP-202 B2B Commerce for Developers Accredited Professional certification exam trainers.

If there is any renewal about AP-202 dumps PDF materials, the customers will receive it in the mail boxes as we will send it to them automatically, Opportunities will always be there for those who are well-prepared.
