Test SPLK-1003 Collection Pdf - SPLK-1003 Download Pdf

The Web-Based Splunk SPLK-1003 practice test evaluates your Splunk Enterprise Certified Admin exam preparation with its self-assessment features. With this computer-based program, you may automate the entire Splunk exam testing procedure. The web-based Splunk SPLK-1003 practice test elegantly designed interface is compatible with all browsers, including Internet Explorer, Safari, Opera, Google Chrome, and Mozilla Firefox. It will make practice and preparation for the Splunk SPLK-1003 Exam more intelligent, quick, and simple. So, you can be confident that you will find all you need to know to pass the Splunk SPLK-1003 exam questions on the first try.

Splunk Enterprise Certified Admin Sample Questions (Q159-Q164):

NEW QUESTION # 159

Which of the following statements apply to directory inputs? {select all that apply}

- A. When adding new log files to a monitored directory, the forwarder must be restarted to take them into account.
- B. All discovered text files are consumed.
- C. Splunk recursively traverses through the directory structure.
- D. Compressed files are ignored by default

Answer: A

NEW QUESTION # 160

An admin is running the latest version of Splunk with a 500 GB license. The current daily volume of new data is 300 GB per day. To minimize license issues, what is the best way to add 10 TB of historical data to the index?

- A. Buy a bigger Splunk license.

- B. Add all 10 TB in a single 24 hour period.
- C. Add 2.5 TB each day for the next 5 days.
- D. Add 200 GB of historical data each day for 50 days.

Answer: C

NEW QUESTION # 161

In a customer managed Splunk Enterprise environment, what is the endpoint URI used to collect data?

- A. services/ collector
- B. services/ data/ collector
- C. data/ collector
- D. services/ inputs ? raw

Answer: B

Explanation:

The answer to your question is C. services/data/collector. This is the endpoint URI used to collect data in a customer managed Splunk Enterprise environment. According to the Splunk documentation¹, "The HTTP Event Collector REST API endpoint is /services/data/collector. You can use this endpoint to send events to HTTP Event Collector on a Splunk Enterprise or Splunk Cloud Platform deployment." You can also use this endpoint to send events to a specific token or index¹. For example, you can use the following curl command to send an event with the token 578254cc-05f5-46b5-957b-910d1400341a and the index main: curl -k https://localhost:8088/services/data/collector -H 'Authorization: Splunk 578254cc-05f5-46b5-957b-910d1400341a' -d '{"index":"main","event":"Hello, world!"}'

NEW QUESTION # 162

Which file will be matched for the following monitor stanza in inputs.conf?

[monitor:///var/log*/bar/*.txt]

- A. /var/log/host_460352847/temp/bar/file/csv/foo.txt
- B. /var/ log/ host_460352847/temp/bar/file/foo.txt
- C. /var/log/host_460352847/bar/file/foo.txt
- D. /var/log/host_460352847/bar/foo.txt

Answer: C

Explanation:

The correct answer is C. /var/log/host_460352847/bar/file/foo.txt.

The monitor stanza in inputs.conf is used to configure Splunk to monitor files and directories for new data.

The monitor stanza has the following syntax¹:

[monitor://<input path>]

The input path can be a file or a directory, and it can include wildcards (*) and regular expressions. The wildcards match any number of characters, including none, while the regular expressions match patterns of characters. The input path is case-sensitive and must be enclosed in double quotes if it contains spaces¹.

In this case, the input path is /var/log/bar/.txt, which means Splunk will monitor any file with the .txt extension that is located in a subdirectory named bar under the /var/log directory. The subdirectory bar can be at any level under the /var/log directory, and the * wildcard will match any characters before or after the bar and .txt parts¹.

Therefore, the file /var/log/host_460352847/bar/file/foo.txt will be matched by the monitor stanza, as it meets the criteria. The other files will not be matched, because:

A: /var/log/host_460352847/temp/bar/file/csv/foo.txt has a .csv extension, not a .txt extension.

B: /var/log/host_460352847/bar/foo.txt is not located in a subdirectory under the bar directory, but directly in the bar directory.

D: /var/log/host_460352847/temp/bar/file/foo.txt is located in a subdirectory named file under the bar directory, not directly in the bar directory.

NEW QUESTION # 163

What configuration file are remote Windows Management Instrumentation inputs defined in?

- A. wmi.conf

- B. wmi_inputs.conf
- C. inputs.conf
- D. None, the inputs are defined outside of Splunk.

Answer: A

Explanation:

In Splunk Enterprise, when collecting data from remote Windows machines using Windows Management Instrumentation (WMI), the configurations are defined in the wmi.conf file. This file specifies the parameters for connecting to WMI providers and defines the data inputs.

The wmi.conf file is located in the \$SPLUNK_HOME\etc\system\local\ directory. It contains stanzas that define global settings and input-specific configurations for WMI data collection. This setup allows Splunk to collect various types of data from remote Windows systems, such as event logs and performance metrics, without requiring a forwarder on the remote machine.
