

Managing-Cloud-Security Authentic Exam Questions - Valid WGU WGU Managing Cloud Security (JY02) - Valid Managing-Cloud-Security Torrent

WGU: Managing Cloud Security Questions with Answers 2025

Infrastructure as a service (iaas) - correct answers- allows the customer to install all software, including operating systems (oss) on hardware housed and connected by the cloud vendor.

Platform as a service (paas) - correct answers- contains everything included in iaas, with the addition of oss. this model is especially useful for software development operations (devops).

Software as a service (saas) - correct answers- includes everything listed in the previous infrastructure as a service (iaas) and platform as a service (paas) models, with the addition of software programs.

Encryption - correct answers- offers a degree of assurance that nobody without authorization will be able to access your data in a meaningful way.

Cloud service provider (CSP) - correct answers- provides administrative assistance for the customer and the customer's data and processing needs. examples include amazon web services, rackspace, and microsoft's azure.

Virtualization - correct answers- a process of creating a virtual version of something, including virtual computer hardware platforms, operating systems, storage devices, and computer network resources.

Vendor lock-in - correct answers- occurs in a situation where a customer may be unable to leave, migrate, or transfer to an alternate provider due to technical or non-technical constraints.

Cloud provider - correct answers- a service provider that offers customer storage or software solutions available via a public network, usually the internet.

Cloud portability - correct answers- the ability to move applications and associated data between one cloud provider and another, or between legacy and cloud environments.

Cloud access security broker (CASB) - correct answers- a third-party entity offering independent identity and access management (IAM) services to csps and cloud customers, often as an intermediary.

We use what to determine the critical paths, processes, and assets of an organization? - correct answers- BIA (the business impact analysis is designed to ascertain the value of the organization's assets, and learn the critical paths and processes.)

If a cloud customer wants a bare-bones environment in which to replicate their own enterprise for bc/dr purposes, which cloud service model would probably be best? - correct answers- iaas - iaas offers what is basically a hot/warm dr site, with hardware, connectivity, and utilities, allowing the customer to build out any kind of software configuration (including choosing oss).

We all realize that how important an Courses and Certificates certification is, also understand the importance of having a good knowledge of it. Passing the Managing-Cloud-Security exam means you might get the chance of higher salary, greater social state and satisfying promotion chance. Once your professional ability is acknowledged by authority, you master the rapidly developing information technology. With so many advantages, why don't you choose our reliable Managing-Cloud-Security Actual Exam guide, for broader future and better life? Our Managing-Cloud-Security exam questions won't let you down.

It can't be denied that professional certification is an efficient way for employees to show their personal Managing-Cloud-Security abilities. In order to get more chances, more and more people tend to add shining points, for example a certification to their resumes. What you need to do first is to choose a right Managing-Cloud-Security Exam Material, which will save your time and money in the preparation of the Managing-Cloud-Security exam. Our Managing-Cloud-Security latest questions is one of the most wonderful reviewing Managing-Cloud-Security study training materials in our industry, so choose us, and together we will make a brighter future.

Valid Managing-Cloud-Security Torrent - Test Managing-Cloud-Security Dumps

As you can see, our Managing-Cloud-Security practice exam will not occupy too much time. Also, your normal life will not be disrupted. The only difference is that you harvest a lot of useful knowledge. Do not reject learning new things. Maybe your life will be changed a lot after learning our Managing-Cloud-Security Training Questions. And a brighter future is waiting for you. So don't waste time and come to buy our Managing-Cloud-Security study braindumps.

WGU Managing Cloud Security (JY02) Sample Questions (Q204-Q209):

NEW QUESTION # 204

Which regulation restricts the government from forcing a cloud service provider to disclose customer data?

- A. SCA
- B. SOX
- C. ECPA
- D. GLBA

Answer: A

Explanation:

The Stored Communications Act (SCA) restricts the government's ability to force a cloud service provider to disclose customer data. Managing Cloud guidance explains that the SCA establishes legal protections for stored electronic communications and customer records held by service providers.

The act defines conditions under which government entities may request access to stored data, requiring appropriate legal processes such as warrants or court orders. This provides a level of privacy protection for cloud customers and limits unauthorized or excessive disclosure.

GLBA focuses on financial data, SOX addresses corporate governance, and ECPA is broader legislation that includes the SCA but does not directly define cloud disclosure limitations on its own. Therefore, SCA is the correct answer.

NEW QUESTION # 205

Which data retention method is used for business continuity and disaster recovery (BC/DR) backups?

- A. Archiving and retrieval procedures
- B. Local agent checks
- C. Monitoring and enforcement
- D. Data classification

Answer: A

Explanation:

Archiving and retrieval procedures are the data retention method used for business continuity and disaster recovery (BC/DR) backups. Managing Cloud principles describe BC/DR as a critical operational function that ensures data can be restored following system failures, cyber incidents, or natural disasters.

Archiving involves securely storing backup data in a manner that preserves integrity and availability over time. Retrieval procedures define how quickly and effectively data can be accessed and restored when needed.

Together, these procedures ensure that organizations can resume operations with minimal disruption.

The other options do not support BC/DR directly. Data classification categorizes data by sensitivity, local agent checks focus on endpoint health, and monitoring and enforcement apply to security oversight rather than retention. Therefore, archiving and retrieval procedures are essential for BC/DR backups.

NEW QUESTION # 206

Which U.S. standard is used by federal government agencies to manage enterprise risk?

- A. The Statement on Standards for Attestation Engagements 18 (SSAE 18)
- B. The Committee of Sponsoring Organizations (COSO) framework
- C. The National Institute of Standards and Technology (NIST) SP 800-37
- D. International Organization for Standardization (ISO) 37500

Answer: C

Explanation:

Federal agencies in the U.S. rely on NIST SP 800-37, Risk Management Framework (RMF), to manage enterprise risk. RMF provides a structured process for categorizing systems, selecting controls, implementing safeguards, assessing effectiveness, authorizing operations, and continuous monitoring.

ISO 37500 deals with outsourcing governance, SSAE 18 governs service provider audits, and COSO is a corporate governance framework but not specific to federal agencies.

NIST RMF is integrated with the Federal Information Security Modernization Act (FISMA) requirements, ensuring agencies manage cybersecurity risks consistently. Its adoption is expanding beyond government into industries seeking comprehensive, repeatable risk management processes.

NEW QUESTION # 207

Which country lacks a national law assuring individual personal privacy?

- A. Canada
- B. Israel
- C. New Zealand
- **D. United States**

Answer: D

Explanation:

The United States lacks a single, comprehensive national law assuring individual personal privacy. Managing Cloud principles explain that U.S. privacy protections are governed by a sector-specific approach, with different laws covering healthcare, finance, education, and children's data.

Unlike countries with unified privacy legislation, the U.S. relies on a combination of federal, state, and industry-specific regulations.

This fragmented framework contrasts with national privacy laws in countries such as Canada, New Zealand, and Israel.

As a result, organizations operating in the U.S. must navigate multiple regulatory requirements depending on data type and jurisdiction. Therefore, the United States is the correct answer.

NEW QUESTION # 208

Which technology prevents the environment from being over-controlled with performance-degrading security measures for applications?

- A. Quality of Service (QoS)
- **B. Runtime Application Self-Protection (RASP)**
- C. Distributed Denial of Service (DDoS)
- D. Intrusion Detection System (IDS)

Answer: B

Explanation:

Runtime Application Self-Protection (RASP) prevents environments from being over-controlled with performance-degrading security measures. Managing Cloud guidance explains that RASP operates from within the application, monitoring behavior and responding to threats in real time.

Because RASP provides contextual awareness of application logic, it reduces the need for excessive external security controls such as heavy network filtering or constant scanning. This minimizes performance impact while maintaining effective protection against attacks like injection, unauthorized access, and misuse of application functions.

QoS manages traffic prioritization, DDoS describes an attack type, and IDS detects threats but does not prevent over-control. Therefore, RASP is the correct technology.

NEW QUESTION # 209

.....

The ExamTorrent is currently in use by a lot of students and they have rated it as one of the best study materials for the preparation of WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) test. The customers are satisfied because the ExamTorrent comes with free demos and up to 1 year of free updates. We have a 24/7 support team which means the user can get help anytime if

they face any problem. Our support team will always help the customers whenever they face issues. Customers can start using the WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) instantly after purchasing it from us. Buy It Now and Take The First Step Towards Success!
