The DumpsTorrent Plat-UX-101 exam questions are the real PSE questions that will help you to understand the real Salesforce Certified Platform User Experience Designer Plat-UX-101 Exam Pattern and answers and you can easily pass the final Salesforce Certified Platform User Experience Designer Plat-UX-101 exam.

Salesforce Certified Platform User Experience Designer Sample Questions (Q131-Q136):

NEW QUESTION # 131

A Sales team is having trouble interacting with Contact records in Sales Cloud. They cannot find the information they need, and many of the visible record fields are not relevant to sales activities. On top of that, they complain the page load time is very long. Which approach should be recommended to improve their experience?

- A. Move all unused fields to a separate section at the bottom of the page.
- B. Run the Salesforce Optimizer App to identify fields not in use.
- C. Implement In-App Guidance to help users focus on the most important fields.

Answer: B

Explanation:
The best approach to improve the Sales team's experience with Contact records in Sales Cloud is to run the Salesforce Optimizer App to identify fields not in use.The Salesforce Optimizer App is a free tool that scans the Salesforce org and provides a diagnostic report on the performance and health of the org1.It analyzes how the org uses various features, such as fields, triggers, layouts, profiles, reports, and more, and suggests customizations and improvements based on best practices1. By running the Salesforce Optimizer App, the Sales team can find out which fields are not being used or are redundant, and remove or hide them from the Contact record page.This way, they can simplify the page layout, reduce the page load time, and focus on the fields that are relevant to their sales activities2.
Moving all unused fields to a separate section at the bottom of the page is not a good option, as it does not solve the problem of having too many fields on the page. It would still affect the page load time and the user experience, as the users would have to scroll down to see the entire page.Moreover, it would not help the users to find the information they need, as the fields would not be organized in a logical or meaningful way3.
Implementing In-App Guidance to help users focus on the most important fields is also not a good option, as it does not address the root cause of the problem, which is having too many fields on the page.In-App Guidance is a feature that allows admins to create custom prompts and walkthroughs to guide users through tasks or processes on Salesforce Lightning pages4. It can be useful for user training, onboarding, or adoption, but it cannot replace the need for a clean and efficient page layout.In fact, having too many prompts or walkthroughs on the page can be distracting and annoying for the users, especially if they are not relevant or helpful4.Reference:

NEW QUESTION # 132
Cloud Kicks is incorporating Relationship Design principles into its business model and customer offerings wherever possible. Which principle would represent their company strategy?

- A. Reframing products in terms of outputs over outcomes
- B. Prioritizing engagement over number of impressions
- C. Highlighting product benefits over uncovering customer needs

Answer: B

Explanation:
The principle that would represent Cloud Kicks' company strategy is prioritizing engagement over number of impressions.This principle is based on the intention mindset of Relationship Design, which means engaging with clear purpose and focusing on the quality of interactions rather than the quantity1. Reframing products in terms of outputs over outcomes (A) is not a Relationship Design principle, as it does not consider the value or impact of the products for the customers. Highlighting product benefits over uncovering customer needs is also not a Relationship Design principle, as it does not show empathy or understanding of the customers' problems or goals.Reference:
Embrace the Relationship Design Mindsets Unit | Salesforce Trailhead

NEW QUESTION # 133
Cloud Kicks (CK) has an Unlimited Edition Salesforce org. CK's UX Designer has identified that dynamic dashboards could be a useful tool to improve orgusability and experience.
How many different dynamic dashboards could they create?

- A. Up to 10
- B. Unlimited

- C. Up to 20
- D. Up to 3

Answer: A

Explanation:
According to the Salesforce documentation, the number of dynamic dashboards that an organization can have depends on the edition of Salesforce that they are using. A dynamic dashboard is a dashboard that runs using the security settings of the user viewing the dashboard, so that each user sees the data according to their own access level. Dynamic dashboards are useful for sharing one common set of dashboard components to users with different levels of access, without having to create separate dashboards for each user or role. The documentation states that:
Enterprise Edition can use up to 5 dynamic dashboards
Unlimited and Performance Edition can use up to 10 dynamic dashboards
Developer Edition can use up to 3 dynamic dashboards
Additional dynamic dashboards may be available for purchase
Therefore, since Cloud Kicks has an Unlimited Edition Salesforce org, they can create up to 10 different dynamic dashboards1Taking Advantage of Dynamic Dashboards | Salesforce Developers

NEW QUESTION # 134
A UXDesigner is asked to design a new application built on Salesforce.
What should be their first step?

- A. Create branding sets for each audience using Experience Builder.
- B. Become familiar with theSalesforce Lightning Design System (SLDS) component blueprints.
- C. Design a series of custom web component for the app.
- D. Find and review relevant AppExchange packages.

Answer: B

Explanation:
The Salesforce Lightning Design System (SLDS) is a collection of design guidelines, resources, and tools that help create consistent, beautiful, and accessible user experiences across the Salesforce platform1. Component blueprints are one of the key resources that the SLDS provides.They are framework-agnostic, accessible HTML and CSS code snippets that can be used to create UI elements such as buttons, cards, menus, and more2.A UX Designer who is asked to design a new application built on Salesforce should become familiar with the SLDS component blueprints as their first step, because they can help them to3:
Understand the structure, behavior, and appearance of the standard Salesforce components and how they can be customized or extended.
Follow the SLDS design principles and best practices, such as clarity, efficiency, consistency, and beauty.
Ensure that the application is responsive, adaptive, and compatible with different devices and screen sizes.
Leverage the SLDS design tokens, icons, and utilities to create a coherent and scalable visual language.
Reduce the development time and effort by reusing the existing code and avoiding duplication.
The other options are not the best first steps for a UX Designer who is asked to design a new application built on Salesforce.Creating branding sets for each audience using Experience Builder is a later step that involves applying the visual identity and style of the application to different user segments and channels4.Finding and reviewing relevant AppExchange packages is a research step that can help to identify existing solutions or features that can be integrated or adapted to the application5. Designing a series of custom web components for the app is a development step that can be done after defining the requirements, wireframes, and prototypes of the application.

NEW QUESTION # 135
Cloud Kicks wants its users to know when a new feature is enabled or available with a short video explaining the new feature. What should be recommended?

- A. Docked prompt using In-App Guidance
- B. Lightning Path component
- C. Custom video component

- D. Utility bar with embedded video

Answer: A

Explanation:
To let its users know when a new feature is enabled or available with a short video explaining the new feature, the recommended solution is to use a docked prompt using In-App Guidance. In-App Guidance is a feature that allows the designer to create prompts and walkthroughs that guide users through new or complex tasks in Salesforce. A docked prompt is a type of prompt that appears at the bottom of the screen and can contain text, images, or videos. A docked prompt can be used to announce a new feature and provide a short video tutorial on how to use it. The designer can also set the conditions for when and how often the prompt should appear, and track the user engagement with the prompt.: In-App Guidance | Salesforce Help : UX Designer Certification Prep: Designing with In-App Guidance | Trailhead

NEW QUESTION # 136

......

Computers are changing our life day by day. We can do many things on computers. Technology changes the world. If you have dream to be a different people, obtaining a Salesforce certification will be the first step. Plat-UX-101 learning materials will be useful for you. As you can see the Forbes World's Billionaires List shows people starting bare-handed are mostly engaging in IT field. Plat-UX-101 Learning Materials may be the first step to help you a different road to success.
