Axis ANVE (Axis Network Video) Certification Exam is a globally recognized certification program that validates an individual's expertise in the field of video surveillance. Axis Network Video Exam certification is designed for those who work with Axis network video products and solutions and want to demonstrate their knowledge and skills in deploying and managing these systems.

Axis Network Video Exam Sample Questions (Q201-Q206):

NEW QUESTION # 201

Which of these surfaces has the lowest reflectance?

- A. Snow
- B. Grass
- C. Sand
- D. Concrete

Answer: D

Explanation:

Concrete has the lowest reflectance among the listed surfaces. Reflectance refers to the ability of a surface to reflect light, and concrete typically reflects less light compared to sand, grass, or snow. This characteristic is important for surveillance in terms of minimizing glare and ensuring better image quality. Axis Communications' documentation on environmental considerations supports this information.

NEW QUESTION # 202

In setting up PTZ control for an Axis encoder, it's very easy to overlook a very important step in the configuration process. After properly connecting the communication wires to the encoder, the next recommended step in the setup is:

- A. Downloading the correct Device ID from the Axis website
- B. Setting the Baud Rate to match the analog PTZ's
- **C. Uploading the correct PTZ driver**
- D. Setting the Device ID to match the analog ID

Answer: C

NEW QUESTION # 203

Firmware upgrades are efficiently installed using

- A. AXIS Streaming Assistant
- **B. AXIS Device Manager**
- C. AXIS IP Utility
- D. AXIS Site Designer

Answer: B

Explanation:

Firmware upgrades are efficiently installed using AXIS Device Manager. This tool allows for centralized management of Axis devices, enabling easy firmware updates, configuration changes, and maintenance tasks across multiple devices simultaneously. Axis Device Manager streamlines the process, ensuring that devices remain up-to-date with the latest features and security improvements. Detailed instructions for using AXIS Device Manager are available in Axis' support documentation and user manuals.

NEW QUESTION # 204

A customer wants to minimize the risk of losing recordings if there is a disconnect between the camera and the server. What is recommended?

- **A. Failover recordings**
- B. Co-location
- C. RAID
- D. UPS

Answer: A

Explanation:

To minimize the risk of losing recordings if there is a disconnect between the camera and the server, failover recordings are recommended. This involves having a secondary recording location, such as an SD card in the camera, that can store video footage temporarily until the connection to the server is restored. This ensures continuous recording and prevents data loss. Axis Communications' documentation on system reliability and failover solutions supports this recommendation.

NEW QUESTION # 205

What network device is required to move data from one LAN to another?

- **A. A router**

- B. A hub
- C. A port
- D. A subnet

Answer: A

Explanation:

"A router is used to connect different local area networks (LANs), routing traffic between them and providing access to other networks or the internet."

- Axis Communications Academy, Network Video Fundamentals, 2022

"Routers are devices that forward data packets between computer networks."
