VMware 2V0-15.25試験に完全な2V0-15.25資料勉強をパスします: 効率的なVMware Cloud Foundation 9.0 Support

CertJukenの2V0-15.25問題集は多くの受験生に検証されたものですから、高い成功率を保証できます。もしこの問題集を利用してからやはり試験に不合格になってしまえば、CertJukenは全額で返金することができます。あるいは、無料で試験2V0-15.25問題集を更新してあげるのを選択することもできます。こんな保障がありますから、心配する必要は全然ないですよ。

VMware 2V0-15.25 認定試験の出題範囲:

トピック	出題範囲
トピック 1	Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.
トピック 2	VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.
トピック 3	IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.
トピック 4	Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.

- Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.

VMware Cloud Foundation 9.0 Support 認定 2V0-15.25 試験問題 (Q54-Q59):

質問 # 54

An administrator is responsible for managing a remote VMware Cloud Foundation (VCF) fleet with the following configuration:

- * A single VCF instance with a single Workload Domain.
- * The Workload Domain has a single VMware vSAN Express Storage Architecture (ESA) cluster.
- * VCF is licensed using the disconnected mode.

The administrator discovers a notification in VCF Operations showing that the VCF licenses have expired.

Which three steps should the administrator take to resolve the issue? (Choose three.)

- A. Restart SDDC Lifecycle Manager Service in the VCF Operations console.
- **B. Use the VCF Business Services console to export a new VCF license file.**
- **C. Export the usage file from VCF Operations and upload to the VCF Business Services console.**
- **D. Import the license file into VCF Operations and assign to the SDDC Manager.**
- E. Import the license file into VCF Operations and assign to the workload domain vCenter.
- F. Increase the license core count in SDDC Manager.

正解: B、C、D

解説:

In VMware Cloud Foundation (VCF) 9.0 using disconnected mode licensing, VCF Operations does not automatically synchronize license status with VMware's cloud services. Instead, the administrator must periodically refresh the license file using a manual offline workflow. When the VCF Operations console reports that licenses have expired, it means the license entitlement in the VCF Business Services portal is out of date, and therefore VCF Operations cannot validate the current usage.

The VMware-documented offline licensing workflow requires the following steps:

* Export the usage file from VCF Operations. This usage file contains consumption details needed to generate a new offline license. #C is correct.

* Upload the usage file to the VCF Business Services console and generate a new offline license file. In disconnected mode, the Business Services portal is the only mechanism to create updated license entitlements. #D is correct.

* Import the updated VCF license file into VCF Operations, specifically assigning it to the SDDC Manager. SDDC Manager is the system that validates and enforces licensing across workload domains, so the new license must be applied there—not only to a vCenter. #F is correct.

Options A and B do not affect license validation.

Option E is incorrect because workload-domain vCenter licensing is independent and not the root cause of VCF license expiration.

質問 # 55

An administrator is tasked to add a new host to a vSphere cluster that was created with VMware vSAN Express Storage Architecture (ESA) as its principal storage in an existing workload domain.

The administrator successfully commissions the new host with a VMware vMotion only network pool but is unable to add the host to the existing cluster.

What must the administrator do to be able to complete this task?

- A. Manually configure the vSAN network on the new host within vCenter.
- B. Reconfigure the currently associated network pool with a vSAN network.
- **C. Change the network pool associated to the new host to the network pool for the existing vSAN ESA cluster.**
- D. Decommission, reinstall ESX, and recommission the new host to the network pool for the existing vSAN ESA cluster.

正解: C

解説:

In VCF 9.0, when adding a host to a vSAN ESA-enabled cluster, the host must be commissioned with a network pool that includes a vSAN network configuration. Network pools define host-level networking templates for VCF, including management, vSAN, vMotion, and overlay networks. A host commissioned with a vMotion-only network pool does not have the required vSAN ESA

network interfaces (vmk + NIC mapping) to join an ESA cluster.

Because the administrator successfully commissioned the new host but only using avMotion-only network pool, VCF correctly prevents the host from being added to the ESA cluster.

The required action is:

Reassociate the host with the correct network pool that includes the vSAN ESA network.

Option A (reinstall ESXi) is unnecessary; commissioning workflows can be redone.

Option C (manual vCenter configuration) is explicitly unsupported-VCF manages host networking.

Option D (reconfiguring the existing pool) is not correct because the new host must be associated with the same network pool used by the existing ESA cluster, not change the pool definition itself.

Therefore, the precise and VMware-documented resolution is B.

質問 # 56

A user wishes to publish a VMware Cloud Foundation (VCF) Operations Orchestrator workflow to their VCF Automation project catalog, but is blocked from publishing any workflows.

The following information has been provided:

* In the VCF Automation Organization portal, the user cannot see the Workflows option under Content Hub.

* The organization is not a Provider Consumption Organization.

Which are the two likely causes of this issue? (Choose two.)

- A. The user is logged in the Project Advanced User rights
- **B. An external VCF Operations Orchestrator is not integrated with their Organization.**
- C. The user is logged in with Project User rights.
- D. The user is logged in with Project Administrator rights.
- **E. An embedded VCF Operations Orchestrator is not integrated with their Organization.**

正解: B、E

解説:

In VMware Cloud Foundation 9.0, publishing a VCF Operations Orchestrator workflow to a VCF Automation project catalog requires that the Organization has a valid integration with VCF Operations Orchestrator. The question states that the user cannot see the Workflows option under Content Hub, and the organization is not a Provider Consumption Organization (PCO). According to the VCF 9.0 documentation, only organizations with VCF Operations Orchestrator integration are allowed to publish workflows into the catalog. Both embedded and external orchestrator integrations must be configured depending on the environment. If no orchestrator (embedded or external) is integrated with the organization, workflows cannot be listed or published. This aligns with the documented VCF Automation and VCF Operations Orchestrator design requirements, which specify that workflow publishing is only available when the orchestrator instance is properly registered.

Additionally, user role permission issues could prevent workflow visibility, but the key blockers described in the scenario are the missing workflow section and the organization type. Because the organization is not a PCO, advanced provider features-including workflow publishing-are disabled unless a proper orchestrator integration exists. Therefore, the two most likely causes are:

* A: An external VCF Operations Orchestrator is not integrated with their Organization.

* D: An embedded VCF Operations Orchestrator is not integrated with their Organization.

These two conditions directly match the documented behavior in VMware Cloud Foundation 9.0.

質問 # 57

An administrator attempts to add a new user (provideradmin05) within the VMware Cloud Foundation (VCF) Automation Provider Management Portal, however provideradmin05 cannot be found for import.

The following information is provided:

* The existing VCF Fleet uses VMware Identity Broker (VIDB) for single sign-on.

* VIDB uses Active Directory as the identity provider.

* A group named VCFA_ProviderAdmins was created in Active Directory, populated with the appropriate user accounts and synchronized with VIDB.

* Five days later provideradmin05 was added to VCFA_ProviderAdmins.

What will resolve this issue?

- A. In the VCF Automation Provider Management Portal, enable the Advanced Rights Bundle Mode.
- B. In the VCF Automation Provider Management Portal, import provideradmin05 as an LDAP user.
- **C. In VCF Operations, manually resync the directory.**
- D. In VCF Operations, disable VCF SSO for VCF Automation.

正解: C

解説:

VMware Cloud Foundation (VCF) 9.x uses VMware Identity Broker (VIDB) as the central identity provider for the entire VCF fleet. VIDB synchronizes user and group metadata from the connected enterprise identity source, in this case Active Directory. When a user is added to an AD group after the group was already synced into VIDB, VIDB does not automatically resync group membership on demand unless a directory synchronization is performed.

In this scenario, the group VCFA_ProviderAdmin was synchronized five days earlier. When the new user provideradmin05 was later added to the AD group, VIDB and therefore the VCF Automation Provider Management Portal does not recognize that new user until an annual directory resynchronization occurs from VCF Operations.

This operation forces VIDB to:

- * Requery Active Directory
- * Update group membership information
- * Repopulate available users for import into VCF Automation

Options B and D are incorrect because they do not influence Identity Broker directory synchronization. Option C (disable VCF SSO) would break authentication and is not a valid solution.

質問 # 58

An administrator is creating an additional Organization for All Apps within VMware Cloud Foundation (VCF) Automation. After logging into the VCF Automation Provider Management Portal UI, the administrator is only able to create new Organizations for All Apps.

What action can the administrator take to resolve the issue and complete the task?

- A. Delete the existing Organization for VM Apps using the VCF Automation API.
- B. Create the new Organization for VM Apps using the VCF Automation API.
- C. Delete any existing Organizations for All Apps from the Provider Management Portal UI.
- **D. Enable the creation of new Organization for VM Apps feature in the Provider Management Portal UI.**

正解: D

解説:

In VMware Cloud Foundation (VCF) 9.0 Automation, Provider Administrators manage which types of Organizations can be created:

- * VM Apps Organizations
- * All Apps Organizations

These capabilities are controlled by Feature Flags within the VCF Automation Provider Management Portal

. If the administrator logs in and only sees the ability to create All Apps Organizations, it means that the feature flag enabling VM Apps Organization creation has not been turned on.

VCF Automation requires the Provider Admin to explicitly enable creation of VM Apps Organizations, because doing so exposes VM-centric consumption models and allows the environment to differentiate between VM-only and hybrid (VM + Kubernetes) application deployments.

Therefore, the administrator simply needs to navigate to:

Provider Management Portal # Administration # Feature Flags # Enable "Create VM Apps Organizations" Option A (creating via API) is unnecessary-the UI will support it once the feature is enabled.

Option B (deleting existing VM Apps orgs) has no effect on feature availability.

Option C (deleting All Apps orgs) is unrelated and would not unlock VM Apps org creation.
