EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31

Question:

What is the main advantage of a write-through operation in cache write I/O operations?

- A. No impact to host I/O performance
- **B. Enhanced data security**
- C. Reduced write-response time
- D. Low risk of data loss

Answer: B

Explanation:

Inwrite-through caching, data is written simultaneously to both the cache and the underlying disk. This ensures data integrity because the write is not acknowledged until it's safely written to the disk.

* Write-backcaching offers reduced latency but increases risk of data loss if cache is lost.

* Write-throughtrades speed for security, offeringenhanced data securityand reducing the risk of data loss during power failures.

NEW QUESTION # 32

Question:

What is a key challenge in managing the variety aspects of Big Data?

- A. Storing transaction-based data over the years
- **B. Combining data from various sources and formats cost-effectively**
- C. Reducing data volume to manageable sizes
- D. Generating real-time data

Answer: B

Explanation:

Big Data's'variety'refers to the challenge of integrating different data types (structured, semi-structured, unstructured) from various sources.

The key challenge is tocombine and manage this data cost-effectively, ensuring analytics systems can process it seamlessly.

* Generating real-time datais about velocity, not variety.

* Storing data over yearsis about volume.

* Reducing volumeis more about data management, not variety.

NEW QUESTION # 33

Question:

What is true about the FCIP?

- A. Connects local FC or iSCSI SANs to remote FC or iSCSI SANs
- B. Connects local iSCSI SANs to remote iSCSI SANs
- **C. Connects local FC SANs to remote FC SANs**
- D. Connects local iSCSI SANs to remote FC SANs

Answer: C

Explanation:

FCIP (Fibre Channel over IP)is used totunnel Fibre Channel traffic over IP networks. Its primary use case:

* Connecting local FC SANs to remote FC SANsfor disaster recovery and remote data replication.

* Itencapsulates FC framesinto IP packets, transporting them over existing IP infrastructure.

* Option B/C/D:iSCSI is not directly involved in FCIP's primary function.

NEW QUESTION # 34

Question:

What is a read miss in cache operations?

- A. Writing data to the cache

- B. Fetching requested data that is already in cache
- **C. Fetching data that is not in cache**
- D. Deleting data from the cache

Answer: C

Explanation:

A read miss occurs when the data requested by the host is not available in the cache. As a result, the storage system must fetch the data from the slower disk storage (back-end), leading to higher latency.

* Cache hit: Data is already in cache # faster response.

* Cache miss (read miss): Data not in cache # fetched from the disk.

NEW QUESTION # 35

Question:

When troubleshooting a virtual machine, which file is most likely to provide a detailed history of the VM's behavior?

- **A. Log file**
- B. Configuration file
- C. Virtual disk file
- D. Memory state file

Answer: A

Explanation:

Log files record events and messages related to the operations of a virtual machine. They provide detailed information about the VM's behavior, errors, and system messages, which are crucial for troubleshooting.
