DumpsValid Salesforce Mule-Arch-201 exam training materials praised by the majority of candidates is not a recent thing. This shows DumpsValid Salesforce Mule-Arch-201 exam training materials can indeed help the candidates to pass the exam. Compared to other questions providers, DumpsValid Salesforce Mule-Arch-201 exam training materials have been far ahead. uestions broad consumer recognition and reputation, it has gained a public praise. If you want to participate in the Salesforce Mule-Arch-201 Exam, quickly into DumpsValid website, I believe you will get what you want. If you miss you will regret, if you want to become a professional IT expert, then quickly add it to cart.

You have the option to change the topic and set the time according to the actual Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam. The Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) practice questions give you a feeling of a real exam which boost confidence. Practice under real Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam situations is an excellent way to learn more about the complexity of the Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam dumps.

## Practice Mule-Arch-201 Questions, Valid Dumps Mule-Arch-201 Files

Now you can think of obtaining any Salesforce certification to enhance your professional career. DumpsValid's study guides are your best ally to get a definite success in Mule-Arch-201 exam. The guides contain excellent information, exam-oriented questions and answers format on all topics of the certification syllabus. With 100% Guaranteed of Success: DumpsValid's promise is to get you a wonderful success in Mule-Arch-201 Certification exams. Select any certification exam, Mule-Arch-201 dumps will help you ace it in first attempt. No more cramming from books and note, just prepare our interactive questions and answers and learn everything necessary to easily pass the actual Mule-Arch-201 exam.

### Salesforce Certified MuleSoft Platform Architect Sample Questions (Q139-Q144):

#### NEW QUESTION # 139

What do the API invocation metrics provided by Anypoint Platform provide?

- A. Proactive identification of likely future policy violations that exceed a given threat threshold
- **B. Data on past API invocations to help identify anomalies and usage patterns across various APIs**
- C. Measurements of the effectiveness of the application network based on the level of reuse
- D. ROI metrics from APIs that can be directly shared with business users

**Answer: B**

Explanation:

Correct Answer: Data on past API invocations to help identify anomalies and usage patterns across various APIs

\*\*\*\*\*

API Invocation metrics provided by Anypoint Platform:

>> Does NOT provide any Return Of Investment (ROI) related information. So the option suggesting it is OUT.

>> Does NOT provide any information w.r.t how APIs are reused, whether there is effective usage of APIs or not etc...

>> Does NOT provide any prediction information as such to help us proactively identify any future policy violations.

So, the kind of data/information we can get from such metrics is on past API invocations to help identify anomalies and usage patterns across various APIs.

#### NEW QUESTION # 140

What API policy would LEAST likely be applied to a Process API?

- A. Custom circuit breaker
- **B. JSON threat protection**
- C. Rate limiting
- D. Client ID enforcement

**Answer: B**

Explanation:

Correct Answer: JSON threat protection

\*\*\*\*\*

Fact: Technically, there are no restrictions on what policy can be applied in what layer. Any policy can be applied on any layer API. However, context should also be considered properly before blindly applying the policies on APIs.

That is why, this question asked for a policy that would LEAST likely be applied to a Process API.

From the given options:

>> All policies except "JSON threat protection" can be applied without hesitation to the APIs in Process tier.

>> JSON threat protection policy ideally fits for experience APIs to prevent suspicious JSON payload coming from external API clients. This covers more of a security aspect by trying to avoid possibly malicious and harmful JSON payloads from external clients calling experience APIs.

As external API clients are NEVER allowed to call Process APIs directly and also these kind of malicious and harmful JSON payloads are always stopped at experience API layer only using this policy, it is LEAST LIKELY that this same policy is again applied on Process Layer API.

### NEW QUESTION # 141

Which statement is true about identity management and client management on Anypoint Platform?

- **A. Anypoint Platform supports configuring one external identity provider**
- B. Both client management and identity management require an identity provider
- C. If an external identity provider is configured, the SAML 2.0 bearer tokens issued by the identity provider cannot be used for invocations of the Anypoint Platform web APIs
- D. If an external client provider is configured, it must be configured at the Anypoint Platform organization level and cannot be assigned to individual business groups and environments

**Answer: A**

Explanation:

Anypoint Platform allows organizations to integrate one external identity provider (IdP) for identity and access management (IAM), supporting SSO and centralized user authentication.

Identity Provider Limit:

Anypoint Platform supports configuring a single IdP for the organization, which can be used to authenticate all users across business groups and environments within that Anypoint organization.

of Correct Answer (C):

Configuring one IdP ensures centralized and secure identity management, aligned with MuleSoft's architecture.

of Incorrect Options:

Option A is incorrect because SAML 2.0 bearer tokens from external IdPs can indeed be used for invoking Anypoint Platform APIs.

Option B is incorrect as client providers can be assigned to specific business groups and environments.

Option D is incorrect since only identity management strictly requires an IdP; client management does not.

Reference

For further details on identity management options, consult MuleSoft documentation on Anypoint Platform's IAM capabilities.

### NEW QUESTION # 142

When using CloudHub with the Shared Load Balancer, what is managed EXCLUSIVELY by the API implementation (the Mule application) and NOT by Anypoint Platform?

- A. The number of DNS entries allocated to the API implementation
- B. The assignment of each HTTP request to a particular CloudHub worker
- **C. The SSL certificates used by the API implementation to expose HTTPS endpoints**
- D. The logging configuration that enables log entries to be visible in Runtime Manager

**Answer: C**

Explanation:

Correct Answer: The SSL certificates used by the API implementation to expose HTTPS endpoints

\*\*\*\*\*

>> The assignment of each HTTP request to a particular CloudHub worker is taken care by Anypoint Platform itself. We need not manage it explicitly in the API implementation and in fact we CANNOT manage it in the API implementation.

>> The logging configuration that enables log entries to be visible in Runtime Manager is ALWAYS managed in the API implementation and NOT just for SLB. So this is not something we do EXCLUSIVELY when using SLB.

>> We DO NOT manage the number of DNS entries allocated to the API implementation inside the code. Anypoint Platform takes care of this.

It is the SSL certificates used by the API implementation to expose HTTPS endpoints that is to be managed EXCLUSIVELY by the API implementation. Anypoint Platform does NOT do this when using SLBs.

### NEW QUESTION # 143

A customer wants to monitor and gain insights about the number of requests coming in a given time period as well as to measure key performance indicators (response times, CPU utilization, number of active APIs).

Which tool provides these data insights?

- **A. Anypoint Monitoring**

- B. Runtime Alerts
- C. APT Manager
- D. Functional Monitoring

**Answer: A**

Explanation:

Understanding Anypoint Monitoring and Its Capabilities:

Anypoint Monitoring provides comprehensive visibility into Mule applications, offering metrics and analytics such as request counts, response times, CPU utilization, memory usage, and other key performance indicators (KPIs). This tool is designed to help teams monitor API usage, troubleshoot issues, and optimize application performance.

Evaluating the Options:

Option A (Correct Answer): Anypoint Monitoring is the ideal tool for this requirement. It provides real-time insights into metrics such as the number of requests, response times, CPU utilization, and active API usage.

Option B (API Manager): API Manager focuses on API lifecycle management, including applying policies, managing contracts, and setting access controls. It does not provide performance monitoring or KPI tracking.

Option C (Runtime Alerts): Runtime Alerts can notify users of specific conditions, like high CPU usage, but they do not provide a full suite of metrics or insights over a given time period.

Option D (Functional Monitoring): Functional Monitoring focuses on functional testing of APIs rather than performance and usage metrics. It does not provide continuous KPI tracking.

Conclusion:

Option A is the correct answer. Anypoint Monitoring is the most suitable tool to track the specified metrics, providing detailed insights into API requests, response times, CPU usage, and active API counts.

For further details, refer to MuleSoft's Anypoint Monitoring documentation on configuring dashboards and tracking performance metrics.

## NEW QUESTION # 144

.....

The Salesforce Certified MuleSoft Platform Architect certification exam is one of the top-rated career advancement Mule-Arch-201 certifications in the market. This Salesforce Certified MuleSoft Platform Architect certification exam has been inspiring candidates since its beginning. Over this long period, thousands of Salesforce Certified MuleSoft Platform Architect exam candidates have passed their Mule-Arch-201 Certification Exam and now they are doing jobs in the world's top brands.

**Practice Mule-Arch-201 Questions:** <https://www.dumpsvalid.com/Mule-Arch-201-still-valid-exam.html>

We provide you with free demo for you to have a try before buying Mule-Arch-201 exam braindumps, so that you can know what the complete version is like, Considering the different mannerisms of the Mule-Arch-201 practice exam candidates, we have three versions for your needs, To help many exam candidates like you out, our company invited a large group of experts to compile the practice materials with fortitude for over ten years, and with the help of our Practice Mule-Arch-201 Questions updated training, they will relieve of anguish of exam, So you must choose some authoritative products like our Mule-Arch-201 training labs.

A platform is simply the various media and mechanisms you use Practice Mule-Arch-201 Questions to advance the idea that you are an expert, You can choose from 3 different formats available according to your needs.

We provide you with free demo for you to have a try before buying Mule-Arch-201 Exam Braindumps, so that you can know what the complete version is like, Considering the different mannerisms of the Mule-Arch-201 practice exam candidates, we have three versions for your needs.

## New Study Mule-Arch-201 Questions - 100% Pass Mule-Arch-201: Salesforce Certified MuleSoft Platform Architect First-grade Practice Questions

To help many exam candidates like you out, Valid Dumps Mule-Arch-201 Files our company invited a large group of experts to compile the practice materials with fortitude for over ten years, and with Mule-Arch-201 the help of our Salesforce MuleSoft updated training, they will relieve of anguish of exam.

So you must choose some authoritative products like our Mule-Arch-201 training labs, So Mule-Arch-201 pass-king materials will try it best to remove all factors that may decrease your pass rate including stress.
