

EMC D-PVM-OE-01 Examcollection Free Dumps | New D-PVM-OE-01 Test Syllabus

P.S. Free 2026 EMC D-PVM-OE-01 dumps are available on Google Drive shared by PassTestking:
https://drive.google.com/open?id=1U4Dpuqz3CPbL6_GpTG1brtqSOrJgTein

Our D-PVM-OE-01 study guide provides free trial services, so that you can gain some information about our study contents, topics and how to make full use of the software before purchasing. It's a good way for you to choose what kind of D-PVM-OE-01 test prep is suitable and make the right choice to avoid unnecessary waste. Besides, if you have any trouble in the purchasing D-PVM-OE-01 practice torrent or trial process, you can contact us immediately and we will provide professional experts to help you online.

EMC D-PVM-OE-01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Unisphere for PowerMax 10 Implementation and Administration: This section of the exam measures the skills of System Administrators and covers the implementation and management of Unisphere for PowerMax. Candidates must understand the installation process, post-installation tasks, and interface navigation to efficiently operate the platform. One key skill evaluated is setting up Unisphere for PowerMax.
Topic 2	<ul style="list-style-type: none">PowerMax Family Local and Remote Replication Concepts: This section of the exam measures the skills of Backup and Recovery Specialists and covers the features and functionalities of TimeFinder SnapVX. Candidates must differentiate between SnapVX snapshots and clones while understanding their role in data protection. One key skill assessed is comparing the use cases of snapshots and clones.

Topic 3	<ul style="list-style-type: none"> PowerMax Family Business Continuity Administration: This section of the exam measures the skills of Disaster Recovery Engineers and focuses on replication technologies used for business continuity. Candidates must perform SnapVX and Clone operations using Unisphere for PowerMax and understand Symmetrix Remote Data Facility (SRDF) replication. They must also execute SRDF operations using Unisphere and SYMCLI.
Topic 4	<ul style="list-style-type: none"> Solutions Enabler 10 Implementation: This section of the exam measures the skills of Infrastructure Engineers and focuses on the fundamentals of Solutions Enabler. Candidates must understand its installation, upgrade processes, gatekeeper management, and daemon functions across different platforms. One crucial skill tested is managing Solutions Enabler daemons.
Topic 5	<ul style="list-style-type: none"> PowerMaxOS 10 Data Mobility: This section of the exam measures the skills of Data Migration Specialists and covers data mobility and migration features in PowerMaxOS 10. Candidates must understand the benefits of non-disruptive migration and be able to perform migrations using Unisphere for PowerMax. One key skill assessed is executing non-disruptive data migrations.
Topic 6	<ul style="list-style-type: none"> PowerMax Family Storage Provisioning: This section of the exam measures the skills of Storage Administrators and covers the architecture, configurations, and management of the PowerMax family. Candidates must understand system models, port and device management, and provisioning methods using Unisphere for PowerMax. They are expected to perform service level-based provisioning and allocate storage through auto-provisioning groups. One key skill assessed is configuring storage using Unisphere for PowerMax.
Topic 7	<ul style="list-style-type: none"> PowerMax Family Management in a Virtual Environment: This section of the exam measures the skills of Virtualization Engineers and evaluates the integration of PowerMax storage in virtualized environments. Candidates must understand VMware vSphere, the functionalities of Virtual Storage Integrator (VSI), and how to monitor virtualized workloads using Unisphere for PowerMax. One critical skill assessed is tracking virtual machine storage performance.

Updated D-PVM-OE-01 Examcollection Free Dumps - Find Shortcut to Pass D-PVM-OE-01 Exam

The D-PVM-OE-01 is an import way to improve our competitiveness, and our D-PVM-OE-01 exam dump will help you 100% pass your exam and get a certification. First of all, our D-PVM-OE-01 study materials are constantly being updated and impoved so that you can get the information you need and get a better experience. Our D-PVM-OE-01 test questions have been following the pace of digitalization, constantly refurbishing, and adding new things. I hope you can feel the D-PVM-OE-01 Exam Prep sincerely serve customers. We also attach great importance to the opinions of our customers. The duration of this benefit is one year, and D-PVM-OE-01 exam prep look forward to working with you.

EMC Dell Technologies PowerMax Operate Sample Questions (Q62-Q67):

NEW QUESTION # 62

What are the default settings for a Storage Group in PowerMax, VMAX All Flash, and VMAX3?

- A. No SRP and no SL
- B. Default SRP and Optimized SL**
- C. Default SRP and no SL
- D. No SRP and Optimized SL

Answer: B

NEW QUESTION # 63

What are two characteristics of a SnapVX Linked Target?

- A. They cannot send data to SRDF
- B. They can be made secure
- C. They are read/writable (R/W).
- D. They support a maximum of 1024 snaps per volume

Answer: A,C

Explanation:

Step by Step Comprehensive Detailed Explanation:

* SnapVX Linked Targets: SnapVX is a snapshot technology used in Dell PowerMax storage arrays. A linked target is a volume that provides read/write access to a specific point-in-time copy (snapshot) of a source volume.

* Read/Write Access: Unlike traditional snapshots, which are typically read-only, SnapVX linked targets allow modifications. This makes them suitable for use cases like testing, development, and data analysis where changes need to be made to a copy of the data without affecting the original source.

* Secure Snapshots: SnapVX offers the capability to create "secure snapshots." These snapshots are write-protected and prevent any modifications or deletion, ensuring data integrity and protection against accidental or malicious changes.

Why other options are incorrect:

* B. They support a maximum of 1024 snaps per volume: This is partially correct. While a source volume can have up to 1024 snapshots, this limit includes all types of snapshots (manual, automated, and legacy), not just linked targets.

* B. They cannot send data to SRDF: This is incorrect. SnapVX linked targets can participate in SRDF (Symmetrix Remote Data Facility) replication, allowing for disaster recovery and data mobility.

References and documents of Dell's public documentation for PowerMax Operate v.2:

* Dell Solutions Enabler 10.0.0 TimeFinder SnapVX CLI User Guide: This guide provides detailed information about SnapVX features and commands, including how to create, link, and manage snapshots. It confirms the read/write capability of linked targets and the ability to create secure snapshots. You can find this document on the Dell Support website by searching for "Solutions Enabler TimeFinder SnapVX CLI User Guide."

* Dell PowerMax Family: Essentials and Best Practices Guide: This guide offers a comprehensive overview of PowerMax technologies, including SnapVX. It highlights the benefits of SnapVX linked targets for various use cases. You can find this document on the Dell Support website by searching for "PowerMax Family Essentials and Best Practices Guide."

NEW QUESTION # 64

What does a service level define*?

- A. Expected average response time target for a disk group
- B. Expected average throughput for a disk group
- C. Expected average response time target for a Storage Group
- D. Expected average throughput for a Storage Group

Answer: C

NEW QUESTION # 65

A systems administrator uses the symrdf createpair command to create an R1/R2 pair. Both devices are dynamic SRDF devices. What is the default mode of operation for the SRDF pair when the Establish operation is performed?

- A. Adaptive Copy Write Pending
- B. Synchronous
- C. Adaptive Copy Disk
- D. Asynchronous

Answer: C

NEW QUESTION # 66

The web application server web_host_1 is deprecated. Remove all resources associated with the host to clean up the environment.

Using the simulator, complete the task.

Answer:

Explanation:

See the explanation for step by step solution.

Explanation:

We need to remove all resources associated with a deprecated web application server named `web_host_1` in the Unisphere for PowerMax simulator.

Here's a step-by-step guide on how to accomplish this, based on typical Unisphere functionality and the context of the question:

Steps:

1. Launch the Simulator and Navigate to the Hosts Section

* Open Unisphere for PowerMax in your web browser.

* Log in to the simulator.

* In the left-hand navigation pane, click on `Hosts`>`Hosts`. This will take you to the Hosts management view.

2. Locate the Host `web_host_1`

* In the Hosts view, you'll see a list of all configured hosts.

* Find the host named `web_host_1`. You might need to use the search or filtering options if there are many hosts listed.

3. Identify Associated Resources

* Before deleting the host, it's crucial to identify all resources associated with it. These typically include:

* Masking Views: These define the LUNs that a host can access.

* Storage Groups: These contain the volumes presented to the host.

* Port Groups: These define the connectivity paths (ports) used by the host.

* How to Find Associated Resources:

* Click on the `web_host_1` host entry. This should open a details view or properties page for the host.

* Look for tabs or sections labeled "Masking Views," "Storage Groups," or similar.

* Note down the names of any masking views and storage groups associated with `web_host_1`.

4. Remove the Host from Masking Views

* Navigate to `Hosts`>`Masking Views`.

* Locate the masking views that you identified in Step 3 as being associated with `web_host_1`.

* Open each masking view's properties.

* Remove the Host: There should be an option to edit the host list within the masking view. Find `web_host_1` in the list of hosts and remove it.

- * Save Changes: Save the changes to the masking view.
- * Repeat for all masking views associated with web_host_1.
- 5. Delete or Modify Storage Groups
 - * Navigate to Storage > Storage Groups.
 - * Locate the storage groups that were associated with web_host_1.
 - * Two Options:
 - * If the storage group is ONLY used by web_host_1: You can delete the entire storage group. Select the storage group and click the Delete button (or a similar option).
 - * If the storage group is shared with other hosts: You need to remove the volumes associated with web_host_1 from the storage group.
 - * Open the storage group's properties.
 - * Go to the "Volumes" tab.
 - * Identify the volumes that were presented to web_host_1.
 - * Select those volumes and choose the option to "Remove from Storage Group" or a similarly worded option.
 - * Save the changes to the storage group.
- 6. Delete the Host
 - * Go back to Hosts > Hosts.
 - * Select web_host_1.
 - * Click the Delete button (or a similar option, like a trashcan icon).
 - * Confirm that you want to delete the host.
- 7. Verify Removal (Optional)
 - * After deleting the host and modifying the storage groups and masking views, you can verify that the resources have been properly cleaned up.
 - * Check the Storage Groups and Masking Views sections again to ensure that web_host_1 is no longer listed and that the storage groups have been either deleted or modified as intended.

NEW QUESTION # 67

.....

Great concentrative progress has been made by our company, who aims at further cooperation with our candidates in the way of using our D-PVM-OE-01 exam engine as their study tool. Owing to the devotion of our professional research team and responsible working staff, our training materials have received wide recognition and now, with more people joining in the D-PVM-OE-01 Exam army, we has become the top-raking D-PVM-OE-01 training materials provider in the international market. Believe in our D-PVM-OE-01 study guide, you will succeed in your exam!
