

# OGA-032 Certification Dumps & OGA-032 Study Guide Files & OGA-032 Practice Test Questions

The development of science and technology makes our life more comfortable and convenient, which also brings us more challenges. Many company requests candidates not only have work experiences, but also some professional certifications. Therefore it is necessary to get a professional OGA-032 Certification to pave the way for a better future. The OGA-032 question dumps produced by our company, is helpful for our customers to pass their exams and get the OGA-032 certification within several days.

The Open Group OGA-032 (ArchiMate 3 Part 2) Exam is one of the most valuable certifications for IT professionals who are looking to enhance their skills in enterprise architecture. ArchiMate 3 Part 2 Exam certification is designed to measure the candidate's knowledge and understanding of the ArchiMate 3 specification, including its concepts, language, and techniques. OGA-032 exam is based on the ArchiMate 3.1 Specification, which is the latest version of the specification released by The Open Group.

The Open Group OGA-032 (ArchiMate 3 Part 2) Certification Exam requires candidates to have a good understanding of enterprise architecture and ArchiMate 3.0 modeling language. Candidates can prepare for the exam by taking ArchiMate 3 training courses and studying the ArchiMate 3 standard. OGA-032 exam is available at Pearson VUE testing centers worldwide and consists of multiple-choice questions. Upon passing the exam, candidates will receive a certificate that recognizes their expertise in ArchiMate 3.0 and enterprise architecture.

## OGA-032 Exam Topic - OGA-032 Test Assessment

The ArchiMate 3 Part 2 Exam (OGA-032) examination is necessary for career advancement, therefore, doing your best to prepare for the ArchiMate 3 Part 2 Exam (OGA-032) certification exam is essential. To succeed on the ArchiMate 3 Part 2 Exam (OGA-032) exam, you require a specific ArchiMate 3 Part 2 Exam (OGA-032) exam environment to practice. But before settling on any one method, you make sure that it addresses their specific concerns about the OGA-032 Exam, such as whether or not the platform they are joining will aid them in passing the ArchiMate 3 Part 2 Exam (OGA-032) exam on the first try, whether or not it will be worthwhile, and will it provide the necessary OGA-032 Questions.

## The Open Group ArchiMate 3 Part 2 Exam Sample Questions (Q10-Q15):

### NEW QUESTION # 10

Please read this scenario prior to answering the question

ArchiAir Catering Services (ACS) manages the catering services for ArchiAir, a leading airline. ACS is the sole catering supplier for all ArchiAir flights, and its services include full provisioning to the aircraft.

Currently, ACS operates three central production facilities, supported by distribution hubs and local pre-flight production facilities.

The central production facilities are responsible for producing standardized non-food materials (such as plates, cutlery, and boxes), non-perishable food products, and key ingredients required by the local production facilities. These materials are subsequently distributed to the distribution hubs, which also serve as warehouses for the local production facilities. Within the local production facilities, multiple production machines are utilized, each featuring dedicated workstations for chefs and quality inspectors. Most of the local production facilities employ fully automated assembly lines, including built-in packaging stations. The loaded service trolleys are then transported to the aircraft using small lorries.

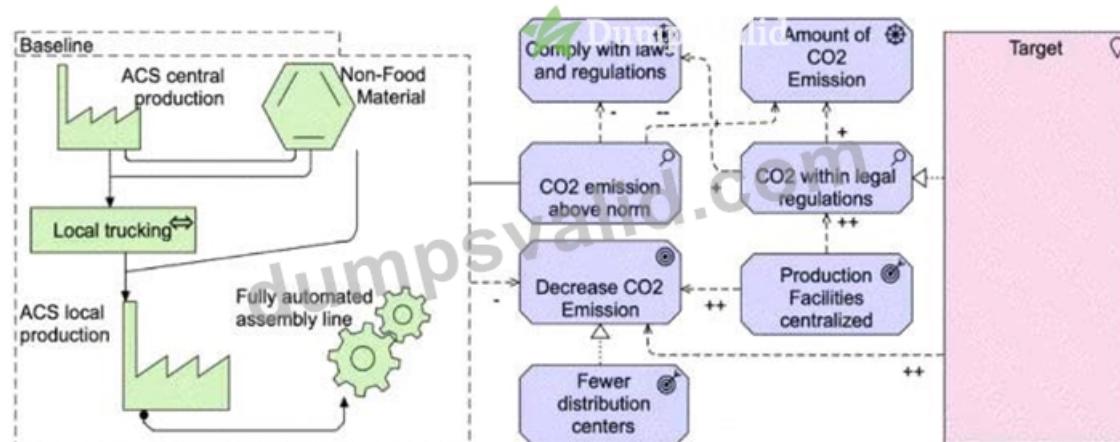

In response to investor pressure for ArchiAir to reduce its carbon footprint, the CEO of ACS has announced a plan to address this environmental concern. Subsequently, the Ministry of Social Welfare and Health has enacted a law mandating a reduction in CO<sub>2</sub> emissions from all production facilities by the end of the year. Additionally, the airline's decision to raise ticket prices due to escalating fuel costs has led to a decrease in passenger numbers. This, in turn, impacts the volume of non-food materials required from ACS. An internal investigation has produced a report highlighting the potential benefits of centralizing production facilities and reducing the number of distribution centers. Such changes would result in lower CO<sub>2</sub> emissions while still effectively meeting all the requirements of ArchiAir.

In addition to evaluating its supply chain to reduce its carbon footprint, ArchiAir is taking proactive steps to achieve a net zero carbon footprint for its IT operations. The Chief Information Officer (CIO) has identified two crucial requirements to support this endeavor. The first requirement involves switching to renewable energy for ACS facilities, which are often located in remote areas where traditional fuels are the primary source of energy. To align with sustainability goals, ArchiAir aims to transition these facilities to renewable energy sources. By utilizing renewable energy, ArchiAir can significantly reduce its reliance on traditional fuels and contribute to a greener operation. The second requirement pertains to the scalability of ArchiAir's IT operations, taking into account the airline's susceptibility to seasonal changes in demand. The CIO has observed notable disparities between sites that have additional blade servers and can scale their capacity, and sites that solely rely on the two mainframes housed in central facilities. A comprehensive report has revealed that the blade servers have a negligible impact on resource waste, whereas the mainframes are notorious for their power inefficiency, particularly during periods of low demand.

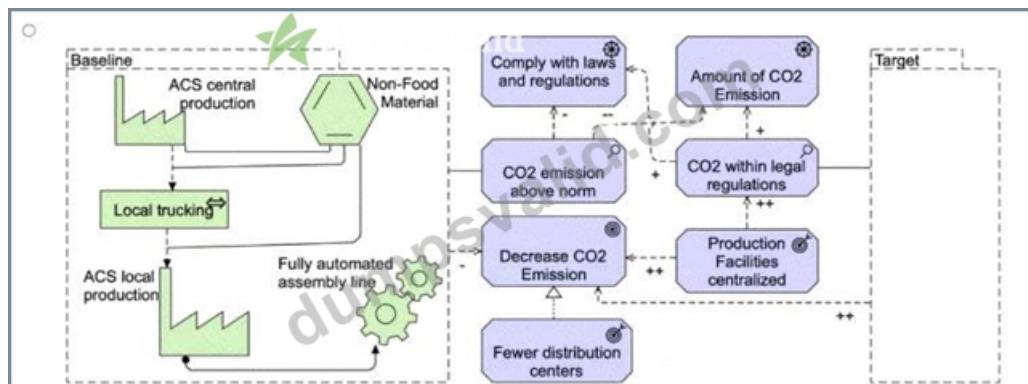

Refer to the Scenario

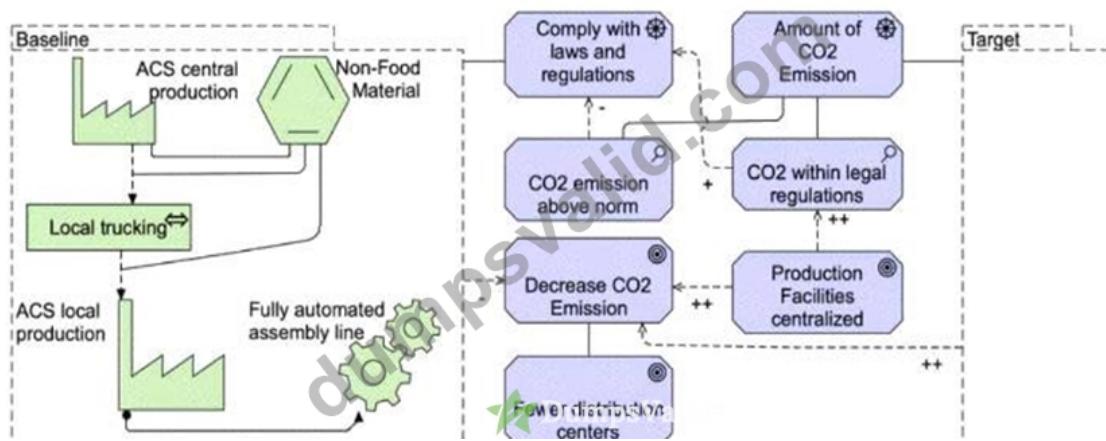

Which of the following answers best describes the proposed transition from baseline to target, including details of motivation for changes? Note that there is no need to show the details of the target state.

- A. A diagram of a process Description automatically generated

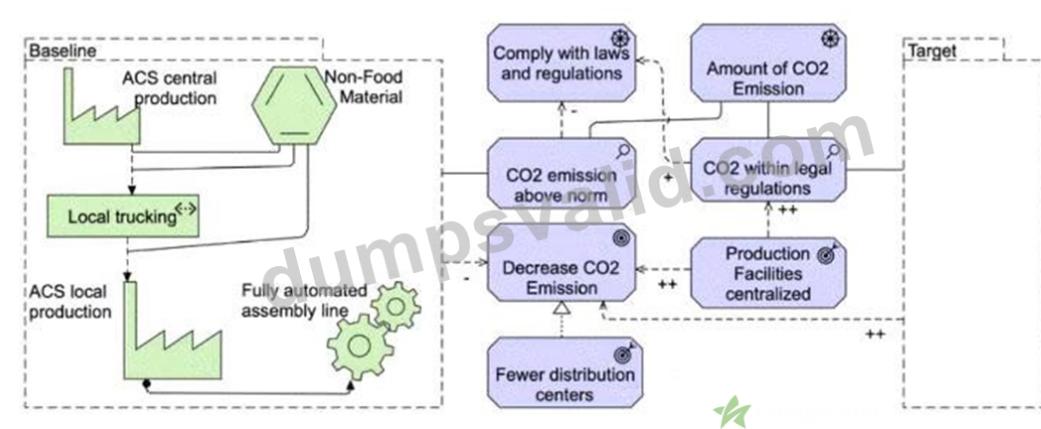

- B.
- C.

• D.

**Answer: B**

### Explanation:

The correct answer is D, as it best describes the transition from the baseline to the target state, including the motivation for changes based on the scenario. Here's a detailed explanation of why D is the most accurate model:

\* Baseline and Target:

\* The Baseline state in all answers correctly depicts the current structure of ACS's operations, including the ACS Central Production, Local Trucking, ACS Local Production, and Fully Automated Assembly Line.

\* Dcaptures the essential transition from this baseline state to the target state by illustrating how the organization is aiming to decrease CO2 emissions, as required by the new regulations, and how they intend to centralize production facilities.

#### \* Motivation for Changes (Decrease in CO2 Emissions):

\* The CEO's plan to reduce CO<sub>2</sub> emissions is a critical driver for change. This is captured clearly in D, which shows the effects of Decreasing CO<sub>2</sub> Emissions, Complying with Laws and Regulations, and Centralizing Production Facilities.

\* The Ministry of Social Welfare and Health's law mandating CO<sub>2</sub> reductions is accurately reflected in D, showing compliance as part of the motivation.

\* Dalso depicts the motivation to centralize production facilities, which helps reduce CO2 emissions and aligns with the internal report suggesting that fewer distribution centers can meet ACS's needs effectively.

#### \* Business and Environmental Factors:

\* The scenario also points out that passenger numbers have decreased due to rising ticket prices, which reduces the demand for non-food materials from ACS. This factor is linked to the centralization effort, as reducing the need for distribution centers can reduce costs while still meeting business needs.

\* Dreflects this by linking Fewer Distribution Centers and Centralized Production Facilities to both decreased emissions and operational efficiency.

#### \* Compliance with Laws and Regulations:

\* Dshows a clear connection between compliance with CO2 Emission Laws and the Amount of CO2 Emissions generated by ACS, which is an essential driver of change in the scenario.

\* The need to ensure that emissions are within the legal limit is modeled effectively inD, reflecting the scenario's requirement to meet regulatory expectations by the end of the year.

#### \* Centralization of Production:

\* The scenario suggests that centralizing production is one way to reduce emissions and achieve operational efficiency. This is depicted clearly in D, where Production Facilities Centralized leads to both fewer distribution centers and a significant decrease in

CO2 emissions.

\* Dlinks the motivation for fewer distribution centers to environmental sustainability (CO2 reduction) as well as operational improvements.

\* Comprehensive ArchiMate® 3 Compliance:

\* Aligns well with ArchiMate® 3 standards. It models the Motivation Elements such as goals (e.g., Decrease CO2 Emissions), assessments (e.g., CO2 Emission Above Norm), and requirements (e.g., Comply with Laws and Regulations) accurately.

\* The relationships between these motivation elements are correctly depicted using ArchiMate® connectors like influences and associations, ensuring that the transition from baseline to target is clear and fully compliant with ArchiMate® 3 best practices.

Conclusion: Answer D provides the best representation of the proposed transition, focusing on the motivations for centralization and reduction of CO2 emissions. It accurately reflects the scenario's requirements, including legal compliance, environmental goals, and operational changes, all while following ArchiMate® 3 modeling standards.

## NEW QUESTION # 11

Please read this scenario prior to answering the question

The ArchiSurance senior management, board members, customers, and major stockholders have expressed long-standing concerns regarding the business continuity risks associated with relying on a single data center.

Located in an area prone

to flooding, earthquakes, and occasional water leaks from the cafeteria above, the current data center has significant vulnerabilities.

To address these concerns and mitigate the risks, ArchiSurance has developed a comprehensive plan to relocate its existing data center to two separate ready-to-use data centers in different cities. As a major undertaking, the approval of the Board of Directors is required to proceed with the project.

The primary objectives of the data center move are to reduce the risk of business interruptions, reduce both planned and unplanned downtime for critical applications, and provide reassurance to ArchiSurance stakeholders. Ensuring minimal disruption during the transition is crucial. However, several constraints make the planned migration to the new data centers particularly challenging.

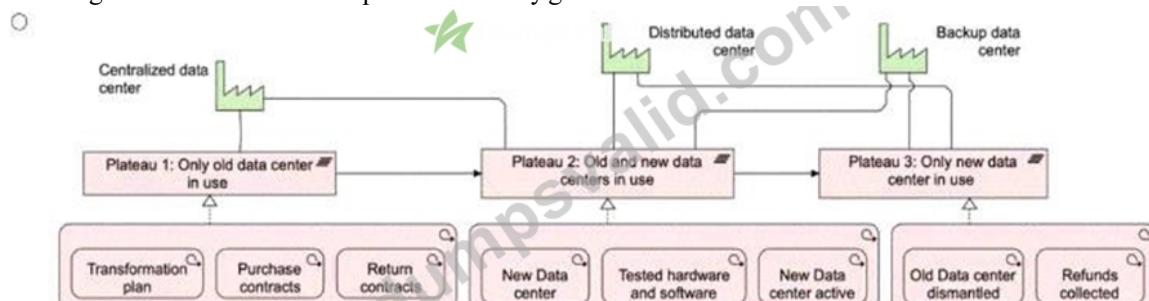

Certain critical ArchiSurance applications cannot be offline for more than one hour, and any planned downtime must be restricted to specific four-hour windows on weekends. Additionally, the migration cannot take place during quarterly or year-end closing periods to avoid disrupting critical processing operations.

ArchiSurance management has devised a multi-phase data center transformation program to facilitate a smooth transition. Each phase is critical for establishing stable and fully functional data center configurations throughout the transformation process. The initial phase entails detailed scheduling and planning to develop a comprehensive transformation plan aligned with ArchiSurance's timing and scheduling requirements. During the second phase, ArchiSurance will procure the necessary hardware and software for the new data centers, while also seeking refunds for the hardware and software in the current data center once it is decommissioned. The third phase involves setting up the new data centers and conducting parallel testing of the new hardware and software alongside the existing production environment. The transition between the old and new data centers occurs in the fourth phase, followed by the fifth phase, which is the decommissioning of the old data center. This involves returning the hardware and software to obtain the contracted refunds. Each phase, from the second to the fifth, is initiated once specific conditions outlined in the previous phase have been met.

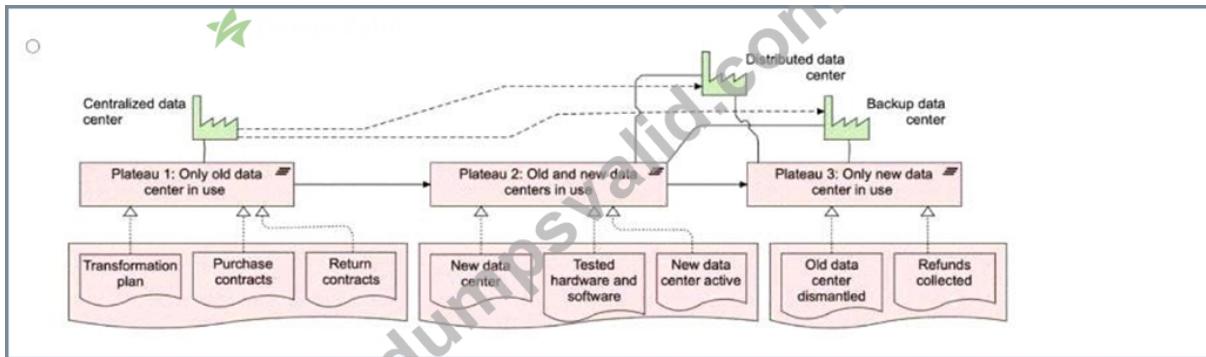

Refer to the Scenario

The program manager overseeing the data center transformation has asked you to model an outline of the implementation plan which has three stable states defined. You should show the deliverables associated with each plateau in connection with the physical elements. Additionally, you need to show how each phase contributes to achieving a stable state for the data center transformation. Which of the following answers provides the best description?

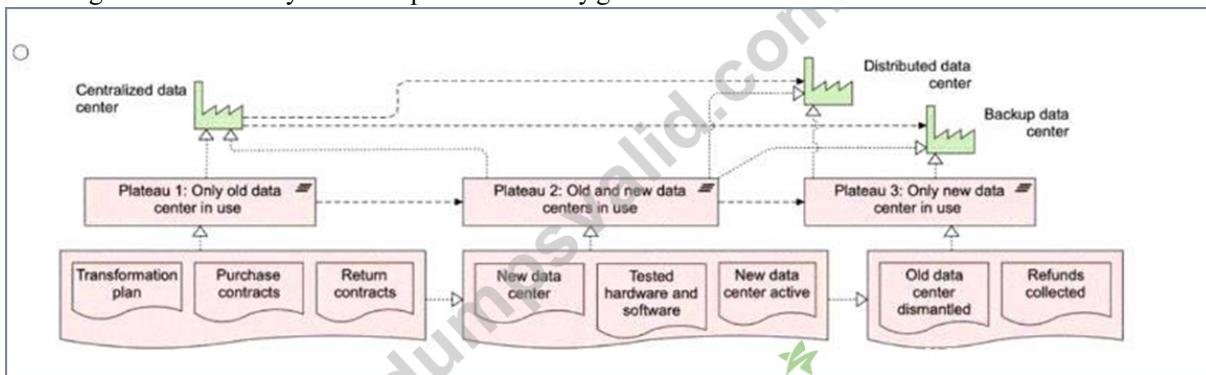

- A. A diagram of a data center Description automatically generated

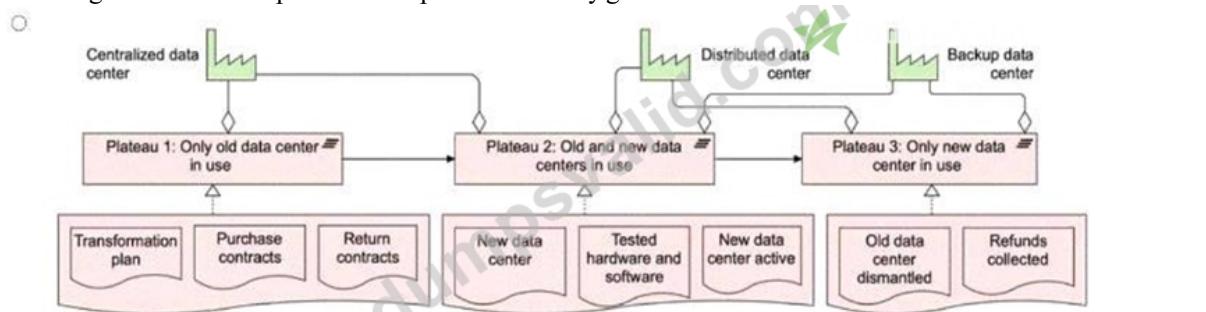

- B. A diagram of a data processing process Description automatically generated

- C. A diagram of a software system Description automatically generated

- D. A diagram of a software process Description automatically generated

## Answer: B

### Explanation:

This question focuses on modeling the implementation plan for the data center transformation at ArchiSurance. The goal is to represent how the different phases of the project contribute to achieving the three stable states, or plateaus, while illustrating the deliverables connected to these plateaus and the physical elements involved.

### Key ArchiMate® 3.2 Concepts Applied:

\* **Plateaus:** Plateaus represent intermediate stable states within an architecture transformation, showing the condition of the architecture at specific moments in time. In this scenario, the plateaus correspond to the stable data center configurations at different phases:

\* **Plateau 1:** Only the old data center is in use.

\* **Plateau 2:** Both the old and new data centers are in use simultaneously.

\* **Plateau 3:** Only the new data center is in use, and the old data center is fully decommissioned.

\* **Physical Elements:** These refer to the data centers, hardware, software, and networks that make up the infrastructure being migrated. These should be clearly depicted in connection with each phase of the transformation program.

\* **Deliverables and Phases:** Each phase of the transformation process includes specific deliverables, such as:

\* Procurement of new hardware and software.

\* Setting up and testing the new data centers.

\* Transitioning between the old and new data centers.

\* Dismantling the old data center and returning its hardware for refunds.

\* **Work Packages and Dependencies:** Work packages represent activities or tasks in ArchiMate® and are connected to the plateaus. These must be modeled with proper sequencing, showing how each phase contributes to reaching the next stable state.

Why Option A is Correct:

\* Option A accurately represents the three plateaus (stable states) and clearly illustrates the deliverables (e.g., the new data center, tested hardware and software, and dismantled old data center) in relation to each phase of the transformation.

\* The connections between the physical elements (such as the centralized data center, distributed data center, and backup data

center) are properly displayed and aligned with the described multi-phase process.

\* The phases are laid out logically, showing how each phase (e.g., procurement, testing, transition) leads to the next stable state (plateau), following the principles of a plateau and work package transformation in ArchiMate®.

\* The flow of deliverables from one plateau to the next is consistent with the need for dependencies (e.g., the new data center cannot be fully active until the hardware and software have been tested in parallel).

Why Other Options Are Incorrect:

\* Option B and Option D do not show the relationships between the phases and the stable states as clearly as Option A. They lack some critical connections or do not accurately represent the progression between plateaus and the physical infrastructure.

\* Option C is closer but misses important sequencing in how the work packages (activities) and plateaus interact, leading to an incomplete representation of the transformation.

Conclusion:

Option A provides the most complete and accurate description based on ArchiMate® 3.2 modeling principles.

It correctly demonstrates how each phase of the data center transformation contributes to achieving the stable states (plateaus) and ensures that the physical elements, work packages, and deliverables are properly aligned.

## NEW QUESTION # 12

Please read this scenario prior to answering the question

ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success.

Based on this assessment, the board has made the decision to setup a subsidiary company to mass-produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers value cost over other factors.

To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focussed R&D - along with their contributions to the new production philosophy.

Moving forward, it has been determined that two out of the three current capabilities require revision.

Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production.

Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.

The Enterprise Architecture team has been tasked with migration planning, and identifying key work packages and deliverables. They have identified two transition states between the current and future scenario. The first transition aims to adjust current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly.

It is important to consider existing

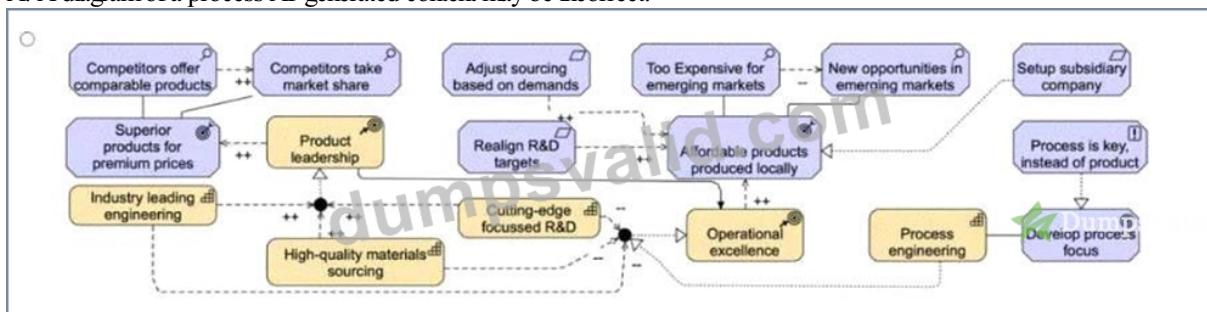

supplier contracts that cannot be immediately canceled during this process.

The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.

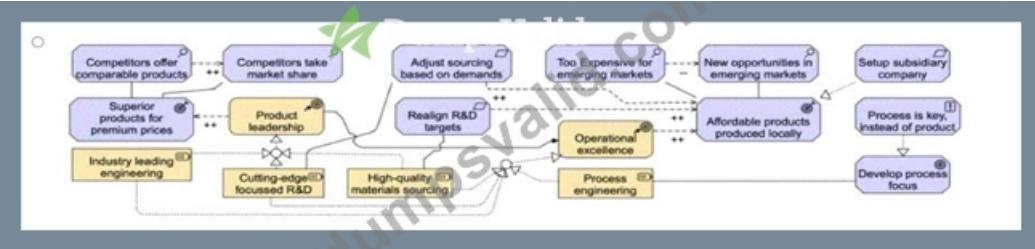

Refer to the Scenario

You have been tasked with modeling the current capabilities of ArchiCar, identifying the capabilities necessary for the company to achieve Operational Excellence, and showing the motivations behind these changes. Which of the following models best answers this?

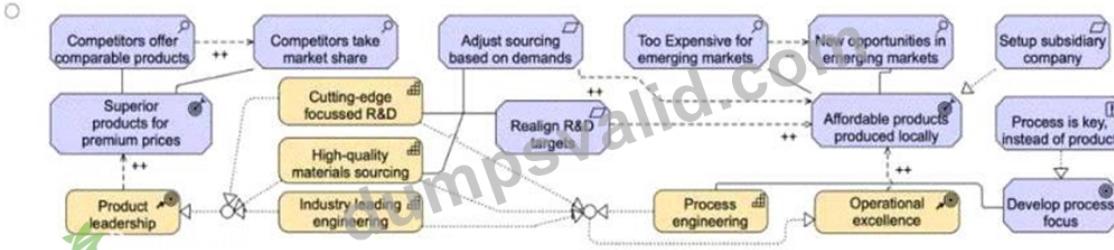

- A. A diagram of a process AI-generated content may be incorrect.

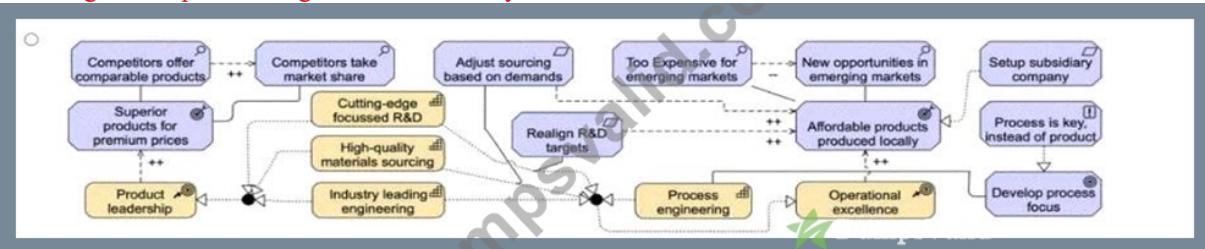

- B. A diagram of a process AI-generated content may be incorrect.

- C. A diagram of a process AI-generated content may be incorrect.

- D. A diagram of a process AI-generated content may be incorrect.

**Answer: D**

**Explanation:**

We need to find the model that best represents:

\* Current Capabilities- Industry-leading engineering, high-quality materials sourcing, and cutting-edge focused R&D.

\* Strategic Shift- Moving from product leadership to operational excellence to enter emerging markets.

\* Required Changes-

\* Adjusting R&D targets to support cost-effective production.

\* Revising materials sourcing for optimization.

\* Introducing process engineering to enable a process-oriented mindset.

\* Motivations Behind the Changes-

\* Competitor pressure.

\* Emerging market opportunities.

\* High costs limiting mass-market success.

**Why D is the Best Choice:**

#Includes all current and future capabilities- Shows the existing strengths of engineering, R&D, and materials sourcing while introducing process engineering as required for operational excellence. #Clearly depicts the shift in strategy- From product leadership to operational excellence and the necessary transformations. #Captures stakeholder concerns and motivations- Including competition, cost concerns, and emerging market opportunities. #Represents dependencies and sequencing correctly- Reflecting how each capability change contributes to the transition states and ultimate business goals.

**Why Not A, B, or C?**

\* A: Does not properly represent the transition between product leadership and operational excellence.

\* B: Fails to clearly define the required capability changes and motivations.

\* C: Lacks key relationships between strategy shifts and operational changes.

### NEW QUESTION # 13

Please read this scenario prior to answering the question

The ArchiSurance senior management, board members, customers, and major stockholders have expressed long-standing concerns regarding the business continuity risks associated with relying on a single data center.

Located in an area prone to

flooding, earthquakes, and occasional water leaks from the cafeteria above, the current data center has significant vulnerabilities.

To address these concerns and mitigate the risks, ArchiSurance has developed a comprehensive plan to relocate its existing data center to two separate ready-to-use data centers in different cities. As a major undertaking, the approval of the Board of Directors is required to proceed with the project.

The primary objectives of the data center move are to reduce the risk of business interruptions, reduce both planned and unplanned downtime for critical applications, and provide reassurance to ArchiSurance stakeholders. Ensuring minimal disruption during the transition is crucial. However, several constraints make the planned migration to the new data centers particularly challenging.

Certain critical ArchiSurance applications cannot be offline for more than one hour, and any planned downtime must be restricted to specific four-hour windows on weekends. Additionally, the migration cannot take place during quarterly or year-end closing periods to avoid disrupting critical processing operations.

ArchiSurance management has devised a multi-phase data center transformation program to facilitate a smooth transition. Each phase is critical for establishing stable and fully functional data center configurations throughout the transformation process.

The initial phase entails detailed scheduling and planning to develop a comprehensive transformation plan aligned with ArchiSurance's timing and scheduling requirements. During the second phase, ArchiSurance will procure the necessary hardware and software for the new data centers, while also seeking refunds for the hardware and software in the current data center once it is decommissioned. The third phase involves setting up the new data centers and conducting parallel testing of the new hardware and software alongside the existing production environment. The transition between the old and new data centers occurs in the fourth phase, followed by the fifth phase, which is the decommissioning of the old data center. This involves returning the hardware and software to obtain the contracted refunds. Each phase, from the second to the fifth, is initiated once specific conditions outlined in the previous phase have been met.

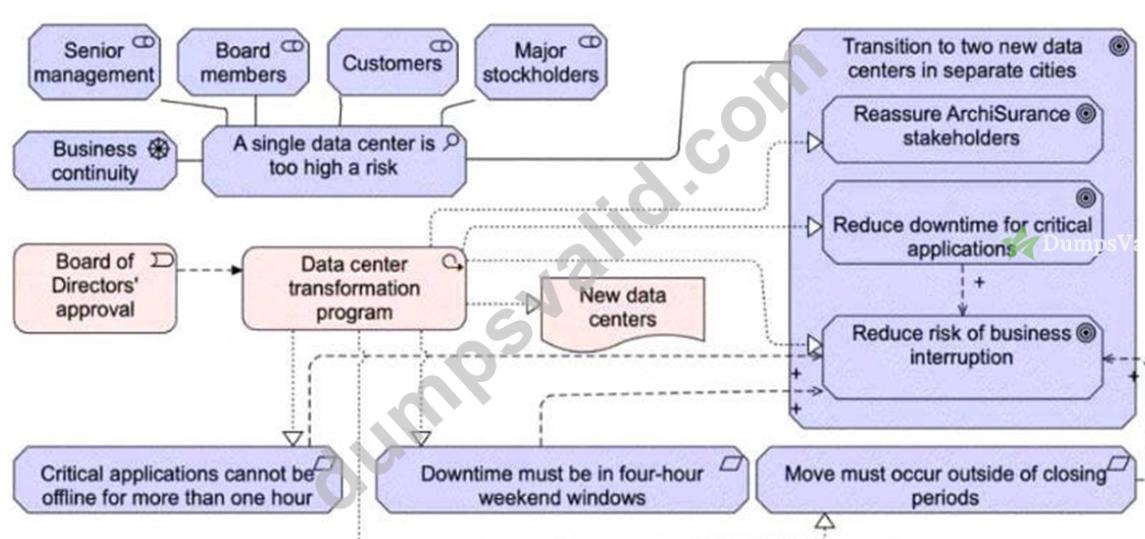

#### Refer to the Scenario

The IT department's leader has assigned you the task of creating a model to explain the rationale behind Archisurance's decision to transform its data center infrastructure. The model should show the concerns and motivations of the stakeholders involved.

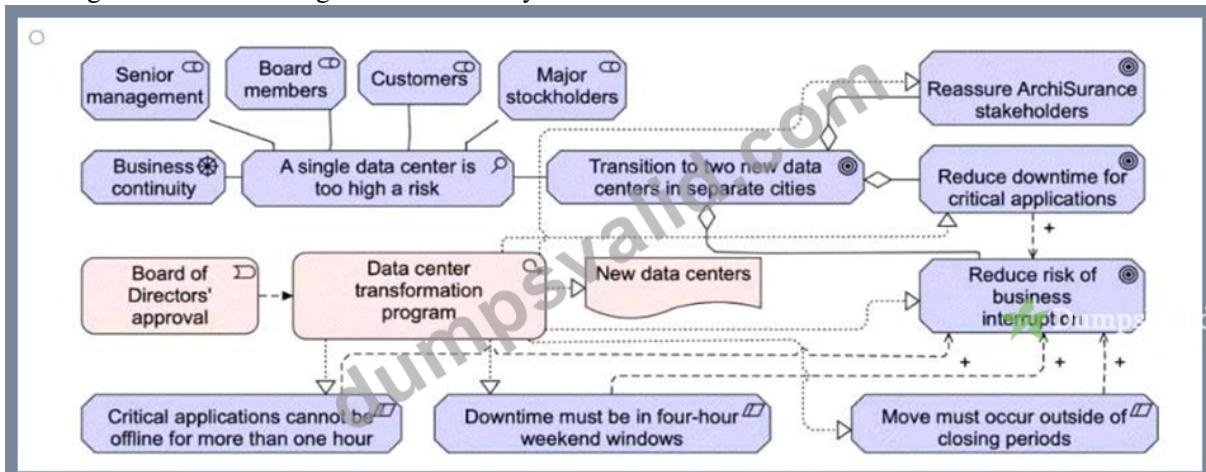

Additionally, it should outline the specific goals to be achieved through the data center transformation program, the associated deliverables, and the limitations that must be considered throughout the program's implementation.

Which of the following answers provides the best explanation?

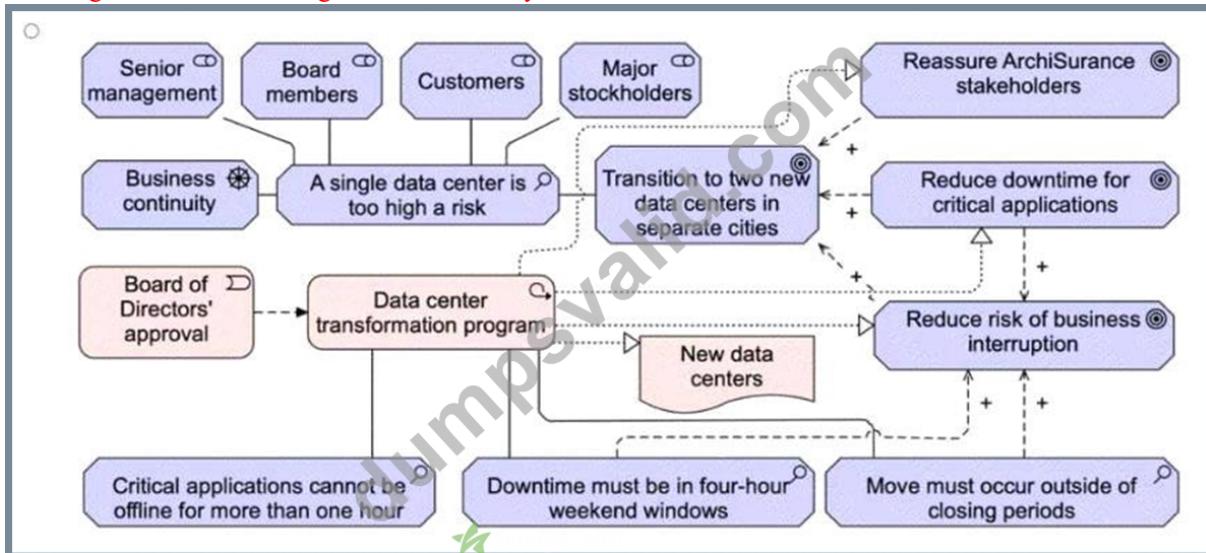

- A. A diagram of a data center AI-generated content may be incorrect.

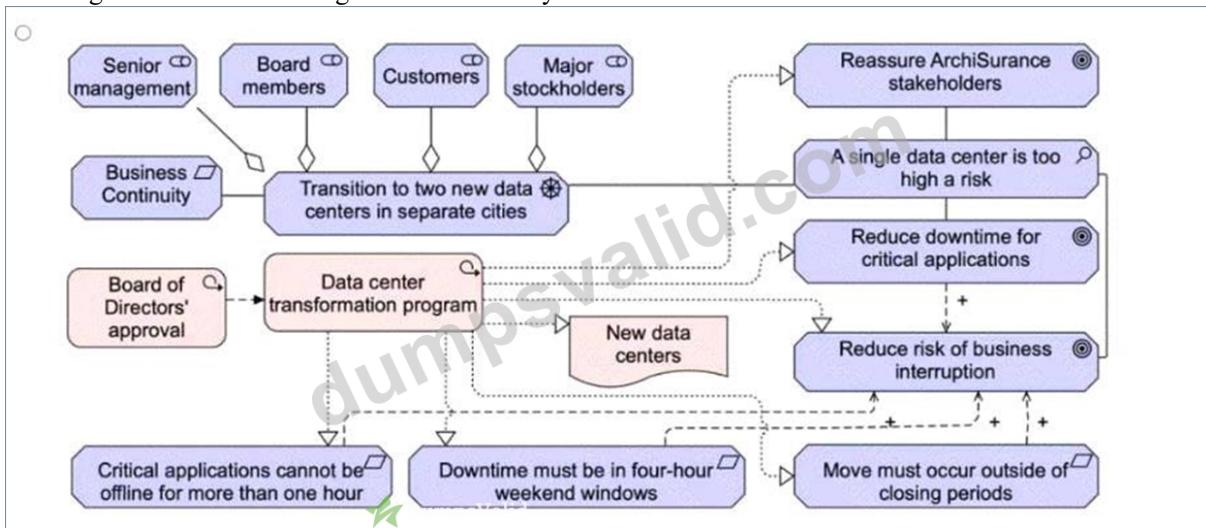

- B. A diagram of data center AI-generated content may be incorrect.

- C. A diagram of data center AI-generated content may be incorrect.

- D. A diagram of a data center AI-generated content may be incorrect.

**Answer: C**

**Explanation:**

We need to identify the most accurate and complete model that explains:

\* Stakeholder Concerns & Motivations- Including senior management, board members, customers, and stockholders.

\* Objectives & Goals- Reducing business risks, minimizing downtime, and reassuring stakeholders.

\* Deliverables- The transition to two new data centers and data center transformation program.

\* Constraints & Requirements-Planned downtime limits, critical application uptime requirements, and scheduling constraints.

Why C is the Best Choice:

#Includes all stakeholder concerns- Clearly represents business continuity risks and the rationale for transitioning to two new data centers.#Clearly defines the objectives- Reducing downtime and risk of business interruption.#Shows key constraints-

\* Critical applications cannot be offline for more than one hour.

\* Downtime must be in four-hour weekend windows.

\* The migration must avoid closing periods.#Links deliverables to objectives- The data center transformation program and new data centers are clearly positioned as solutions.#Represents dependencies correctly- Showing how each motivation leads to a goal, which leads to a deliverable.

Why Not A, B, or D?

\* A: Does not establish a strong link between the concerns and the solution clearly enough.

\* B: The structure does not align well with the scenario requirements, and some constraints and dependencies are missing.

\* D: Overcomplicates some relationships and does not emphasize stakeholder concerns effectively.

**NEW QUESTION # 14**

Please read this scenario prior to answering the question

ArchiSurance has decided to leverage its financial expertise by offering defined contribution retirement plans.

Each trading day, ArchiSurance submits consolidated mutual fund trading transactions to a stock exchange on behalf of its retirement plan participants.

The daily mutual fund trading cycle consists of four key processes: Transaction capture, pricing, trading and reconciliation.

Transaction capture consists of two sub-processes: manual exchange and loans and distributions (L&D). For transaction capture, retirement plan participants use an online account management application to enter manual fund exchange transactions. For L&D, plan participants use a separate application to enter requests. The L&D application determines whether the request can be fulfilled based on the mutual fund balances held in each plan balances and a set of business rules. Each day's captured manual exchange transactions accumulate in a transaction database.

ArchiSurance contracts with a third-party information service to receive a file of mutual fund prices at the close of each trading day. The pricing application uses this file to convert captured transaction into trades, and then validates each trade against the mutual fund balances held in each plan. The pricing application generates a trade file with the minimum number of trades necessary. The trading application sends this file to an external trading service.

When the trading application

receives a confirmation file back from the trading service, it causes the reconciliation application to update the plan recordkeeping database.

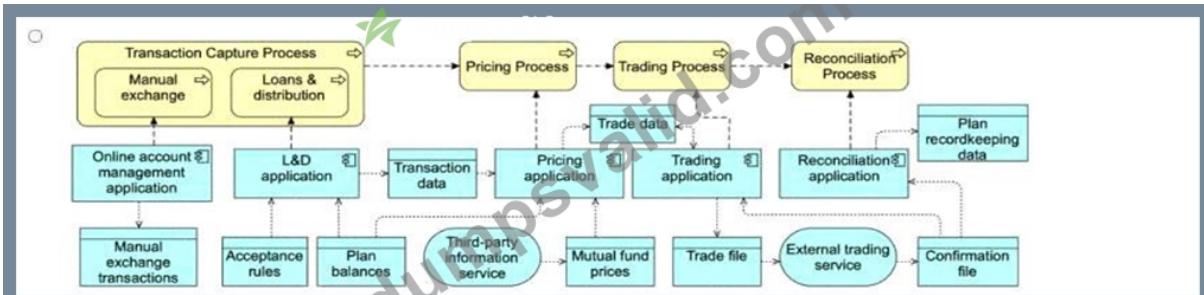

The account management and L&D applications are hosted on separate application server clusters. Each cluster is a physically separate host that runs application server software on a set of virtualized hosts. All of these applications use a database server infrastructure that is hosted on another separate cluster of virtualized servers also on a dedicated physical host. The pricing, consolidation, trading and reconciliation applications, however, are batch applications that run on the ArchiSurance mainframe computer. All application hosts are connected via a converged data center network (DCN), which also connects them to a storage area network (SAN) as well as a wide area network (WAN) that is used to communicate with the external trading service. The SAN includes two physically separate storage arrays, one of which holds data for all databases, and another that holds data for all files.

Refer to the Scenario

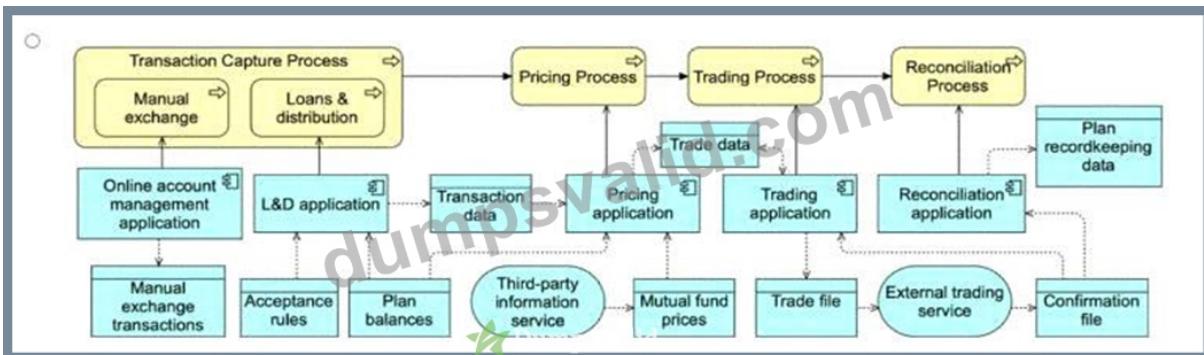

The systems analysts would like to better understand the business processes and applications for daily fund trading. You have been asked to describe the business processes and sub-processes, the applications that they use, the data objects accessed by those applications, and the external application services that access some of those data objects.

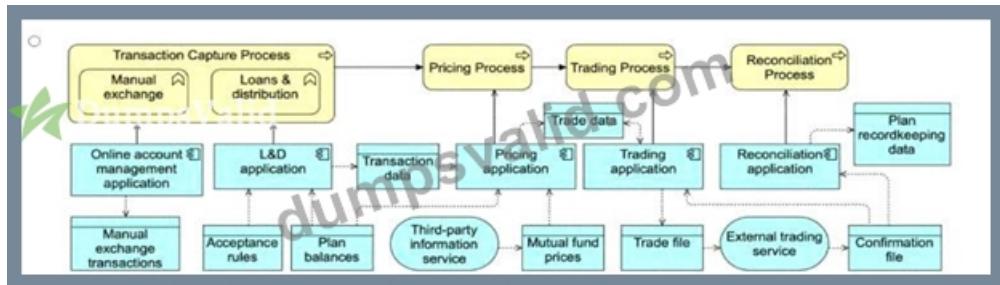

Which of the following is the best answer? Note that you are not required to model the business actors/roles.

- A.

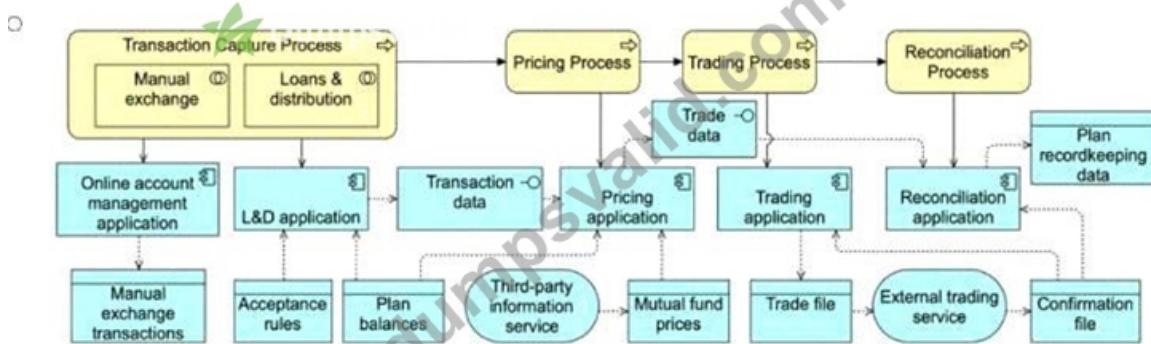

- B.

- C.
- D.

**Answer: D**

**Explanation:**

In this scenario, the goal is to model the business processes, their sub-processes, the applications supporting these processes, and the data objects these applications access. Additionally, external services that access some of these data objects need to be shown. This includes capturing the key processes and their dependencies, as well as understanding how the applications interact with data and external services.

**Key ArchiMate® 3.2 Concepts Applied:**

- \* **Business Processes and Sub-Processes:**
- \* **Transaction Capture Process:** Consists of two sub-processes:
- \* **Manual Exchange**
- \* **Loans & Distribution (L&D)** This process is responsible for capturing transactions from users through different applications (Online Account Management, L&D Application).
- \* **Pricing Process:** This process uses the Mutual Fund Prices from a third-party service and the Plan Balances to validate and price trades.
- \* **Trading Process:** This process generates a Trade File and interacts with an external Trading Service.
- \* **Reconciliation Process:** This final process updates the Plan Recordkeeping Data after confirming trades from the External Trading Service.
- \* **Applications and Data:**
- \* **Online Account Management Application and L&D Application:** These capture user inputs for transactions and maintain Transaction Data and Plan Balances.
- \* **Pricing Application:** Uses Mutual Fund Prices and Transaction Data to generate Trade Data.
- \* **Trading Application:** Submits Trade Data and receives a Confirmation File from the external Trading Service.
- \* **Reconciliation Application:** Uses the Confirmation File to update Plan Recordkeeping Data.
- \* **External Application Services:**
- \* **Third-Party Information Service:** Provides Mutual Fund Prices.
- \* **External Trading Service:** Processes trades and returns a Confirmation File.
- \* **Data Objects:**
- \* **Transaction Data:** Captured by the transaction capture processes.
- \* **Mutual Fund Prices:** Received from the third-party service.
- \* **Trade Data:** Generated by the pricing and trading applications.
- \* **Plan Recordkeeping Data:** Updated by the reconciliation process after trade confirmation.

**Why Option B is Correct:**

- \* Option B provides the most complete and accurate representation of the scenario. It captures the business processes (Transaction Capture, Pricing, Trading, Reconciliation) and their sub-processes, while showing the appropriate connections to the applications that support these processes.
- \* It clearly depicts the data objects (Transaction Data, Plan Balances, Trade File, Mutual Fund Prices, Plan Recordkeeping Data) and their flows between the processes and applications.
- \* The model also includes the external services (Third-Party Information Service and External Trading Service), showing how these

interact with the internal applications and data objects.

\* It accurately represents the flow of Trade Data from the Pricing Application to the Trading Application, and the use of Mutual Fund Prices by the Pricing Process.

## Why Other Options Are Incorrect:

\* Option A and Option D miss some critical connections between the applications and the external services. They also lack clarity in how the data flows between the processes and applications.

\* Option C does not adequately represent the interaction between the applications and the external services (e.g., Third-Party Information Service), which is a key requirement in this scenario.

## Conclusion:

Option B provides the best and most accurate description of the business processes, applications, data objects, and external services involved in ArchiSurance's daily fund trading operations, following ArchiMate® 3.2 standards for modeling business processes and applications.

## NEW QUESTION # 15

• • • •

Are you preparing for the OGA-032 test recently? You may have a strong desire to get the OGA-032 exam certification. Now, you may be pleasure, DumpsValid OGA-032 can relieve your exam stress. The Open Group OGA-032 training camps cover nearly full questions and answers you need, and you can easily acquire the key points, which will contribute to your exam. Besides, The Open Group training dumps are edited by senior professional with rich hands-on experience and several years' efforts, and it has reliable accuracy and good application. I think you will pass your exam test with ease by the study of OGA-032 Training Material. What's more, if you buy OGA-032 exam practice cram, you will enjoy one year free update. So you do not worry that the information you get will be out of date, you will keep all your knowledge the latest.

**OGA-032 Exam Topic:** <https://www.dumpsvalid.com/OGA-032-still-valid-exam.html>
