100% Pass Quiz 1Z0-083 - Fantastic Oracle Database Administration II New Dumps Book

Why don't you begin to act? The first step is to pass 1Z0-083 exam. Time will wait for no one. Only if you pass the exam can you get a better promotion. And if you want to pass it more efficiently, we must be the best partner for you. Because we are professional 1Z0-083 Questions torrent provider, we are worth trusting; because we make great efforts, we do better. Here are some reasons to choose us.

Oracle Database Administration II Sample Questions (Q50-Q55):

NEW QUESTION # 50

In a recent Automatic Workload Repository (AWR) report for your database, you notice a high number of buffer busy waits. The database consists of locally managed tablespaces with free list managed segments. On further investigation, you find that buffer busy waits is caused by contention on data blocks.

Which option would you consider first to decrease the wait event immediately?

- A. Using Automatic Segment Space Management (ASSM)
- B. Decreasing PCTUSED
- C. Increasing db_buffer_cache based on the V\$DB_CACHE_ADVICE recommendation
- D. Decreasing PCTFREE
- E. Increasing the number of DBWN process

Answer: A

NEW QUESTION # 51

Choose three. Which three are true in Oracle 19c and later releases?

- A. Simultaneous data pump jobs can be limited at the pluggable database (PDB) level.
- B. An ordinary data pump export of a table with encrypted columns will always encrypt the same columns when imported.
- C. Tablespaces always remain in read/write mode during transportable tablespace operations.
- D. Tablespaces never remain in read/write mode during transportable tablespace operations.
- E. A transportable data pump import can leave a plugged-in tablespace in read/write mode.
- F. A transportable data pump import can leave a plugged-in tablespace in read-only mode.

Answer: A,E,F

NEW QUESTION # 52

Which three are true? (Choose three.)

- A. Application-common Oracle Label Security (OLS) policies cannot be created in an application root outside an install/patch BEGIN-END block.
- B. Unified auditing can be automatically synchronized to all application PDBs in an application container.
- C. Application-common TSDP policies are always container specific.
- D. Application-common Transparent Security Data Protection (TSDP) policies can be created only within an application install/patch BEGIN-END block.
- E. Virtual Private Database (VPD) policies on objects in an application root are automatically synchronized with all application PDBs contained in the application container.
- F. Fine-grained auditing (FGA) policies in an application root are automatically synchronized to all application PDBs contained in the application container.
- G. Application-common OLS policies can be created in an application root inside an install/patch BEGIN-END block.

Answer: A,B,C

NEW QUESTION # 53

Which two are true about the automatic execution of operating system scripts when performing silent mode installation starting from Oracle Database 19c? (Choose two.)

- A. Silent install always runs operating scripts automatically.
- B. The response file can specify the root or sudo password.
- C. The installer will prompt for the root or sudo password.
- D. The response file can specify the path of the sudo program.
- E. The response file must contain the root or sudo password.

Answer: C,D
