Pass Guaranteed Quiz 2026 Confluent CCAAK Latest Examinations Actual Questions

Perhaps now you are one of the candidates of the CCAAK exam, perhaps now you are worried about not passing the exam smoothly. Now we have good news for you: our CCAAK study materials will solve all your worries and help you successfully pass it. With the high pass rate as 98% to 100%, you will find that we have the best CCAAK learning braindumps which contain the most accurate real exam questions.

Our CCAAK quiz torrent can provide you with a free trial version, thus helping you have a deeper understanding about our CCAAK test prep and estimating whether this kind of study material is suitable to you or not before purchasing. With the help of our trial version, you will have a closer understanding about our CCAAK exam torrent from different aspects, ranging from choice of three different versions available on our test platform to our after-sales service. Otherwise you may still be skeptical and unintelligible about our CCAAK Test Prep. So as you see, we are the corporation with ethical code and willing to build mutual trust between our customers.

CCAAK Valid Exam Tips, Top CCAAK Dumps

If you want to get a higher position in your company, you must do an excellent work. Then your ability is the key to stand out. Perhaps our CCAAK study materials can help you get the desirable position. At present, many office workers are willing to choose our CCAAK study materials to improve their ability. So you can also join them and learn our study materials. You will gradually find your positive changes after a period of practices. Then you will finish all your tasks excellently. You will become the lucky guys if there has a chance. Our CCAAK Study Materials are waiting for you to have a try.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q35-Q40):

NEW QUESTION # 35
A topic 'recurring payments' is created on a Kafka cluster with three brokers (broker id '0', '1', '2') and nine partitions. The 'min.insync replicas' is set to three, and producer is set with 'acks' as 'all'. Kafka Broker with id '0' is down.
Which statement is correct?

- A. Consumers can read committed messages from partitions on broker id T, "2\
- B. Producers will only be able to write messages to the topic where the Leader for the partition is on Broker id T.
- C. Producers and consumers will have no impact on six of the nine partitions.
- D. Producers can write messages to all the partitions, because new leaders for the partitions will be elected.

Answer: C

Explanation:

With 9 partitions spread across 3 brokers, each broker typically hosts 3 leaders (assuming even distribution). When Broker 0 fails, the partitions for which it was leader will elect new leaders on brokers 1 or 2 if enough in-sync replicas (ISRs) remain. But since min.insync.replicas=3 and only 2 brokers are up, no partition can meet the minimum in-sync replica requirement, so producers with acks=all will fail to write. However, for partitions where Broker 0 is not the leader, consumers can still read committed messages. Given that only 3 partitions likely had Broker 0 as leader, six partitions remain accessible for reads, but not writes.

NEW QUESTION # 36
Multiple clients are sharing a Kafka cluster.
As an administrator, how would you ensure that Kafka resources are distributed fairly to all clients?

- A. ACLs
- B. Consumer Groups
- C. Quotas
- D. Rebalancing

Answer: C

Explanation:
Kafka quotas allow administrators to control and limit the rate of data production and consumption per client (producer/consumer), ensuring fair use of broker resources among multiple clients.

NEW QUESTION # 37
An employee in the reporting department needs assistance because their data feed is slowing down. You start by quickly checking the consumer lag for the clients on the data stream.
Which command will allow you to quickly check for lag on the consumers?

- A. bin/kafka-consumer-lag.sh
- B. bin/kafka-consumer-group-throughput.sh
- C. bin/kafka-reassign-partitions.sh
- D. bin/kafka-consumer-groups.sh

Answer: D

Explanation:
The kafka-consumer-groups.sh script is used to inspect consumer group details, including consumer lag, which indicates how far behind a consumer is from the latest data in the partition.
The typical usage is bin/kafka-consumer-groups.sh --bootstrap-server <broker> --describe --group <group_id>

NEW QUESTION # 38
Which use cases would benefit most from continuous event stream processing? (Choose three.)

- A. Fraud detection
- B. Context-aware product recommendations for e-commerce
- C. End-of-day financial settlement processing
- D. Log monitoring/application fault detection
- E. Historical dashboards

Answer: A,B,D

Explanation:
Real-time analysis of transactions helps detect suspicious activity instantly.
Context-aware product recommendations for e-commerce requires real-time user behavior tracking to serve personalized recommendations.
Log monitoring/application fault detection needs immediate processing to alert on system issues or failures.

NEW QUESTION # 39

When a broker goes down, what will the Controller do?

- A. Trigger a leader election among the remaining followers to distribute leadership.
- B. Automatically elect the least loaded broker to become the leader for every orphan's partitions.
- C. Become the leader for the topic/partition that needs a leader, pending the broker return in the cluster.
- D. Wait for a follower to take the lead.

Answer: A

Explanation:

When a broker goes down, the Controller detects the failure and triggers a leader election for all partitions that had their leader on the failed broker. The leader is chosen from the in-sync replicas (ISRs) of each partition.

NEW QUESTION # 40
