At LatestCram, we are aware that every applicant of the IBM Cloud Pak for Data v4.7 Architect (C1000-173) examination is different. We know that everyone has a distinct learning style, situations, and set of goals, therefore we offer IBM C1000-173 updated exam preparation material in three easy-to-use formats to accommodate every exam applicant's needs. This article will go over the three formats of the IBM Cloud Pak for Data v4.7 Architect (C1000-173) practice material that we offer.

IBM Cloud Pak for Data v4.7 Architect Sample Questions (Q32-Q37):

NEW QUESTION # 32

What are two ways to customize Knowledge Accelerators to meet specific requirements?

- A. Change Knowledge Accelerator content inline.
- B. Customize the content in a separate namespace.
- C. Create a separate project for any customized content.

- D. Use a GitHub Repo to manage any changes.
- E. Place Knowledge Accelerator content in a "development" vocabulary separate from the main stream "enterprise vocabulary".

Answer: C,E

Explanation:

Customization of Knowledge Accelerators in IBM Cloud Pak for Data is a structured process to preserve the integrity of base content while allowing for extension. The recommended approaches include:

Creating a separate project for customizations, so that changes are isolated and easily managed without affecting the source accelerator.

Using a "development" vocabulary where custom terms and structures are created. This is separate from the "enterprise vocabulary," which contains the unmodified, original Knowledge Accelerator content.

Inline editing of the original content is discouraged. Use of GitHub or namespaces is not part of the official customization workflow.

NEW QUESTION # 33

What does Watson OpenScale require to generate statistics?

- A. Training data
- B. Access to Pipeline
- C. Test data subset (10%)
- D. Complete test data set

Answer: A

Explanation:

* Training Data Statistics: Watson OpenScale needs to understand the characteristics of the data the model was trained on. This includes things like the distribution of features, sensitive attributes (for fairness monitoring), and how the model performed on this initial data. These "training data statistics" are crucial for:

* Fairness Configuration: Recommending fairness attributes, reference, and monitored groups.

* Bias Detection: Calculating fairness metrics (like disparate impact) by comparing runtime behavior to the learned training data distribution.

* Explainability: Generating explanations by understanding the distribution of values in the training data to create meaningful perturbations.

* Drift Detection: Building a drift detection model that compares runtime data to the training data to identify shifts.

While Watson OpenScale also consumes payload data (the data sent to the deployed model for predictions) at runtime to calculate various metrics and perform monitoring, the initial setup and the ability to generate meaningful statistics for things like fairness and drift fundamentally rely on understanding the training data.

NEW QUESTION # 34

How many service instances can be provisioned for Watson Discovery at one time?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

"You can create a maximum of 10 instances per deployment. After you reach the maximum number, the New instance button is not displayed in IBM Cloud Pak for Data."

NEW QUESTION # 35

In the context of IBM Cloud Pak for Data, which statement best describes the purpose of using OpenShift Operators?

- A. To manage the lifecycle of Cloud Pak services
- B. To automate the deployment of Kafka clusters

- C. To provide logging and monitoring capabilities
- D. To enable automatic scaling of deployed services

Answer: A

NEW QUESTION # 36

Which of the following statements best describes the business value of Watson Assistant?

- A. It provides enhanced security for cloud-based services.
- B. It offers an advanced platform for numerical computation.
- C. It improves customer engagement through AI-driven conversations.
