### ISACA COBIT Design and Implementation Certificate Sample Questions (Q88-Q93):

#### NEW QUESTION # 88

A COBIT consultant is performing a detailed review of current I&T risk assessments to customize design factors for a COBIT implementation project. The consultant notes that board members and executive management are reluctant to engage with IT and that IT lacks committed sponsors. Which of the following governance and management objectives would BEST address this situation?

- A. APO08 Managed Relationships
- B. EDM05 Ensured Stakeholder Engagement
- C. EDM03 Ensured Risk Optimization
- D. APO07 Managed Human Resources

**Answer: B**

Explanation:

The COBIT 2019 Governance and Management Objective EDM05, "Ensured Stakeholder Engagement," focuses on ensuring that stakeholders are engaged, their expectations are considered, and the communication between IT and the business is effective. "The purpose of EDM05 is to ensure that stakeholders are identified and engaged in alignment with enterprise objectives. It supports building commitment and accountability across stakeholders, especially at the executive and board levels." In this scenario, where there is reluctance and lack of sponsorship from senior stakeholders, EDM05 is the most appropriate to address engagement and alignment.

#### NEW QUESTION # 89

I&T-related issues should be considered as part of the design factors for a governance system in order to manage:

- A. risks that have already materialized.
- B. risks that have a high probability.
- C. risks that have a high impact.
- D. risks that could materialize.

**Answer: D**

Explanation:

I&T-related issues should be considered as part of the design factors for a governance system in order to manage risks that could materialize. This proactive approach allows the enterprise to identify and mitigate potential risks before they occur, enhancing the overall resilience and effectiveness of the governance system.

References in COBIT 2019 Design and Implementation:

\* COBIT 2019 Design Guide, Chapter 2: This chapter explains the importance of considering I&T-related issues as design factors to address potential risks that could impact the governance system.

\* COBIT 2019 Framework: Governance and Management Objectives, APO12 (Managed Risk): This objective emphasizes the need to identify and manage risks that could affect IT and business processes.

By addressing potential risks through the design of the governance system, enterprises can better prepare for and mitigate adverse events, ensuring smoother and more effective IT operations.

### NEW QUESTION # 90

When considering the IT implementation methods design factor, and the design factor value is agile, which of the following should be a management objective priority?

- A. Managed enterprise architecture
- B. Managed data (AP014)
- C. Managed risk
- D. Managed IT changes

**Answer: D**

Explanation:

When the IT implementation methods design factor value is agile, the management objective priority should be "Managed IT changes." Agile methodologies involve frequent changes and iterations, making effective change management crucial for success. Agile methodologies emphasize flexibility, iterative development, and rapid response to change. As a result, managing IT changes becomes a priority to ensure that changes are systematically controlled, risks are mitigated, and alignment with business goals is maintained.

COBIT 2019 Framework References:

\* COBIT 2019 Framework: Governance and Management Objectives, BAI06 Managed IT Changes: This objective focuses on managing all IT changes in a controlled manner, ensuring minimal disruption and alignment with business goals.

\* COBIT 2019 Design Guide, Chapter 3: Discusses the importance of aligning management objectives with specific design factors, such as IT implementation methods like Agile.

By prioritizing "Managed IT changes," the enterprise can ensure that its agile implementation remains effective and aligned with overall governance objectives.

### NEW QUESTION # 91

Which of the following describes the difference between the Risk Profile design factor and the I&T-Related Issues design factor?

- A. IT issues describe potential events that could impact the organization in the future, whereas IT risk scenarios describe events or current situations affecting the organization.
- B. IT risk scenarios describe potential events that could impact the organization in the future, whereas IT issues describe events or current situations affecting the organization.
- C. IT risk scenarios have been described in more detail the COBIT 2019 Design Guide than IT issues in order to cover a wide range of potential risk.
- D. IT risk scenarios are more detailed and IT issues are more summarized and the organization can decide which one to use when designing its governance system.

**Answer: B**

Explanation:

In COBIT 2019, the difference between the Risk Profile design factor and the I&T-Related Issues design factor is that IT risk scenarios describe potential events that could impact the organization in the future, while IT issues describe current events or situations affecting the organization.

References in COBIT 2019 Design and Implementation:

\* COBIT 2019 Design Guide, Chapter 2: This chapter outlines the various design factors, including the risk profile and I&T-related issues, and explains their distinctions. Risk scenarios are used to anticipate and plan for future risks, while I&T-related issues address present challenges impacting the enterprise.

By distinguishing between future risks and current issues, enterprises can better plan and prioritize their governance and management activities to address both immediate and potential challenges.

## NEW QUESTION # 92

Using the COBIT 2019 Governance System Design Workflow allows enterprises to:

- A. Design a governance system that focuses primarily on compliance requirements.
- **B. Realize a governance system that is tailored to their needs.**
- C. Ensure each of the stages and steps in the design process are closely adhered to.
- D. Implement a governance framework that is strictly aligned to industry standards.

**Answer: B**

Explanation:

As outlined in the COBIT 2019 Design Guide:

"The governance system design workflow supports the development of a governance system that is tailored to the specific needs, context, and priorities of the enterprise." It is not limited to compliance or rigid frameworks.
