## 완벽한 UiPath-ABAAv1시험패스 인증시험덤프

Itexamdump에서 UiPath UiPath-ABAAv1 덤프를 다운받아 공부하시면 가장 적은 시간만 투자해도 UiPath UiPath-ABAAv1 시험패스하실 수 있습니다. Itexamdump에서 UiPath UiPath-ABAAv1 시험덤프를 구입하시면 완벽한 구매후 서비스를 제공해드립니다. UiPath UiPath-ABAAv1덤프가 업데이트되면 업데이트된 최신버전을 무료로 제공해드립니다. 시험에서 불합격성적표를 받으시면 덤프구매시 지불한 덤프비용은 환불해드립니다.

## 최신 UiPath Automation Business Analyst Associate UiPath-ABAAv1 무료샘플문제 (Q23-Q28):

### 질문 # 23

Who is responsible for managing internal processes and escalations during automation implementation?

- A. Solution Architect
- B. Infrastructure Engineer
- C. Client Team Project Manager
- D. Automation Developer

정답: C

#### 설명:

The Client Team Project Manager is responsible for managing internal processes and handling any escalations that may arise during the automation implementation lifecycle. This individual acts as the liaison between the business and the technical Implementation Team, ensuring alignment, timely responses, and that the business requirements are met.

Their key responsibilities include stakeholder communication, ensuring availability of business SMEs (Subject Matter Experts), resolving conflicts, managing dependencies on internal systems or departments, and escalating issues internally when roadblocks occur. This ensures the smooth execution of the project from the business side.

Effective management from the Client Team Project Manager is critical for success, as delays or miscommunications from the business side can stall the implementation timeline or lead to incomplete automation requirements. Their collaboration with the Implementation Team's project manager also ensures project tracking, scope control, and successful delivery within budget and time.

#### 질문 # 24

Which of the following best describes a human-in-the-loop automation model?

- A. Robots only work when manually triggered
- B. Robots run independently without user input
- C. Users control the robot's every action in real time
- **D. Unattended robots request user input at certain steps**

정답: D

#### 설명:

In a human-in-the-loop automation model, unattended robots perform processes automatically but pause and request user input when required. This model allows robots to handle repetitive and rule-based tasks while humans intervene in scenarios that require decision-making or approval.

UiPath supports human-in-the-loop functionality using tools such as UiPath Action Center, where users can review exceptions, provide additional data, or make business decisions. Once the input is received, the automation resumes and completes the rest of the process autonomously.

This model is particularly useful for processes involving compliance checks, approvals, or document verification - blending the speed of automation with human judgment where necessary.

#### 질문 # 25

Which approach best balances stakeholder input and automation potential in prioritizing processes?

- **A. Combining the assessment with strategic stakeholder feedback.**
- B. Prioritization should be done by relying exclusively on automation potential calculations.
- C. Automation potential is not relevant in the prioritization of processes, only stakeholder input should be considered.
- D. Ignoring stakeholder input to ensure objective decisions.

정답: A

#### 설명:

The best approach to prioritize automation candidates is to combine objective assessments with strategic stakeholder feedback. This ensures that prioritization considers not only the technical feasibility and ROI but also the business context, urgency, and strategic relevance.

While quantitative metrics such as automation potential, complexity, volume, and frequency are crucial, they don't tell the full story. For example, a technically viable process may have low stakeholder support, making adoption difficult. Conversely, a process with moderate automation potential but high strategic importance to leadership may be prioritized for early implementation.

Stakeholder feedback also helps uncover pain points that may not be visible in raw data. Business leaders and process owners provide insights on operational bottlenecks, compliance risks, or customer impact - factors that influence prioritization beyond technical scoring.

By using both qualitative and quantitative inputs, organizations make balanced and informed decisions, selecting processes that are not only good automation candidates but also supported by those who will benefit from them. This approach improves success rates, encourages buy-in, and helps sustain momentum throughout the automation journey.

#### 질문 # 26

What does Automation Implementation Methodology ensure?

- A. Inconsistent delivery quality with flexible tools
- B. Increased cost of automation with flexible timelines
- C. Consistent quality, faster and more reliable implementations, and quicker process handovers
- D. Independent project execution with minimal team coordination

정답: C

설명:

The UiPath Automation Implementation Methodology ensures consistent quality, faster and more reliable implementations, and quicker process handovers by establishing a structured and well-defined approach to automation projects. This methodology includes stages from kickoff to project closure, each involving specific stakeholders, defined deliverables, and quality assurance measures.

The methodology helps organizations deliver automation projects in a repeatable and predictable way, reducing variability in outcomes and enhancing stakeholder satisfaction. It incorporates best practices that align the Client Team and the Implementation Team, ensuring both sides have clear expectations and roles. It also facilitates early identification of risks, effective communication, and streamlined deployment, which leads to faster turnarounds.

Moreover, by following a proven framework, the implementation team can avoid redundant efforts, minimize rework, and focus on value creation. This ultimately leads to more scalable and maintainable automation solutions, reduced time-to-value, and smoother transitions from development to production.

질문 # 27

What is the first stage in the UiPath Automation Implementation Methodology?

- A. Business Case and Technical Validation
- B. Process Analysis
- C. Solution Design
- D. Kickoff

정답: D

설명:

The Kickoff stage is the first formal stage in the UiPath Automation Implementation Methodology. It marks the official beginning of the automation project. During this phase, initial planning and alignment take place between the Client Team and the Implementation Team. This includes defining high-level project scope, identifying key stakeholders, and setting expectations regarding timelines, deliverables, roles, and responsibilities.

The project manager, solution architect, and infrastructure engineer from the Implementation Team typically participate in the Kickoff meeting to ensure technical and managerial aspects are properly addressed.

Discussions also include initial access requirements, infrastructure needs, availability of Client Team members, and user involvement. An essential output of this stage is the reviewed Statement of Work (SOW), which outlines the agreement on the scope and project objectives. This stage sets the foundation for the successful execution of the remaining stages by aligning all parties on the project's goals and ensuring that the groundwork for collaboration is firmly in place.
