There are some prominent features that are making the ISACA CISM exam dumps the first choice of ISACA CISM certification exam candidates. The prominent features are real and verified Certified Information Security Manager (CISM) exam questions, availability of Certified Information Security Manager (CISM) exam dumps in three different formats, affordable price, 1 year free updated ISACA CISM exam questions download facility, and 100 percent ISACA CISM exam passing money back guarantee.

ISACA CISM (Certified Information Security Manager) certification exam is designed to assess the knowledge and skills of individuals in managing and overseeing information security programs. Certified Information Security Manager certification is globally recognized and demonstrates that the individual has the necessary expertise to develop and implement effective information security strategies.

The Certified Information Security Manager (CISM) certification is a globally recognized credential by ISACA that emphasizes the role of information security managers in organizations. The CISM certification is designed for professionals who manage, design, and assess an enterprise's information security. The CISM Certification Exam is a comprehensive exam that tests the candidate's knowledge and understanding of information security management principles and practices.

To become a CISM, one needs to pass the CISM exam, which consists of 150 multiple choice questions that must be completed within four hours. CISM exam covers four domains: Information Security Governance, Risk Management and Compliance, Information Security Program Development and Management, and Information Security Incident Management. The CISM exam is designed to test the candidate's knowledge and understanding of these domains.

### ISACA Certified Information Security Manager Sample Questions (Q464-Q469):

#### NEW QUESTION # 464

Access control to a sensitive intranet application by mobile users can BEST be implemented through:

- A. digital signatures.
- B. data encryption.
- C. strong passwords.
- D. two-factor authentication.

**Answer: D**

Explanation:

Explanation

Two-factor authentication through the use of strong passwords combined with security tokens provides the highest level of security. Data encryption, digital signatures and strong passwords do not provide the same level of protection.

#### NEW QUESTION # 465

Acceptable levels of information security risk should be determined by:

- A. legal counsel.
- B. security management.
- C. die steering committee.
- D. external auditors.

**Answer: C**

Explanation:

Senior management, represented in the steering committee, has ultimate responsibility for determining what levels of risk the organization is willing to assume. Legal counsel, the external auditors and security management are not in a position to make such a decision.

#### NEW QUESTION # 466

Which of the following is the FIRST step when conducting a post-incident review?

- A. Identify mitigating controls.
- B. Perform root cause analysis.
- C. Assess the costs of the incident.
- D. Assign responsibility for corrective actions.

**Answer: B**

Explanation:

Explanation

A post-incident review is a process of analyzing an incident and its impact, identifying the root causes, and recommending corrective actions to prevent recurrence. The first step of a post-incident review is to perform root cause analysis, which is the process of identifying the underlying factors that contributed to the occurrence and severity of the incident. Root cause analysis helps to

determine the most effective and efficient solutions to address the problem and avoid future incidents. References = CISM Review Manual, 16th Edition, Chapter 5, Section 5.5.2.11

#### NEW QUESTION # 467

Which of the following should an information security manager do FIRST upon learning that some security hardening settings may negatively impact future business activity?

- A. Document a security exception.
- B. Reduce security hardening settings.
- C. Perform a risk assessment.
- D. Inform business management of the risk.

**Answer: C**

#### NEW QUESTION # 468

Which of the following is an inherent weakness of signature-based intrusion detection systems?

- A. Long duration probing will be missed
- B. New attack methods will be missed
- C. A higher number of false positives
- D. Attack profiles can be easily spoofed

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

Signature-based intrusion detection systems do not detect new attack methods for which signatures have not yet been developed. False positives are not necessarily any higher, and spoofing is not relevant in this case. Long duration probing is more likely to fool anomaly-based systems (boiling frog technique).

#### NEW QUESTION # 469

.....

Actual4test is growing faster and many people find that obtaining a certificate has outstanding advantage over other peer, especially for promotion or applying for a large company.
