

Pass Guaranteed 2026 Trustable Huawei H12-521_V1.0: HCIP-Intelligent Vision V1.0 Cost Effective Dumps

At the moment when you decided to choose our H12-521_V1.0 real dumps, we feel the responsibility to be with you during your journey to prepare for the H12-521_V1.0 exam. So we clearly understand our duty to offer help in this area. Not only do the H12-521_V1.0 practice materials perfect but we have considerate company that is willing to offer help 24/7. If you have any question, you can just contact our online service, they will give you the most professional advice on our H12-521_V1.0 Exam Guide.

SureTorrent provides updated and valid Huawei H12-521_V1.0 Exam Questions because we are aware of the absolute importance of updates, keeping in mind the Huawei H12-521_V1.0 Exam Syllabus. We provide you update checks for 365 days after purchase for absolutely no cost. And the HCIP-Intelligent Vision V1.0 H12-521_V1.0 price is affordable.

Valid H12-521_V1.0 Exam Labs & Intereactive H12-521_V1.0 Testing Engine

Our H12-521_V1.0 training materials provide three different versions to the client and they include the PDF version, PC version, APP online version. Each version's using method and functions are different but the questions and answers of our H12-521_V1.0 Study Materials is the same. The client can decide which version of our H12-521_V1.0 exam questions to choose according their hobbies and their practical conditions.

Huawei HCIP-Intelligent Vision V1.0 Sample Questions (Q16-Q21):

NEW QUESTION # 16

During live video viewing, you should avoid superimposing the video pane playing live video with the window or dialog box of another program. Otherwise, artifacts or video stuttering may occur.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

During the commissioning and operation of video surveillance clients, such as the iClient, maintaining optimal playback performance is vital for accurate observation. A common technical recommendation is to avoid superimposing the video pane playing live video with the window or dialog box of another program. This is because the video decoding and rendering process on a PC involves high-frequency data transfer between the CPU/GPU and the screen buffer. When another application's window is placed over the active video pane, the computer's graphics subsystem must constantly recalculate which pixels to display, often leading to artifacts or video stuttering.

This phenomenon is especially prevalent when viewing high-resolution streams (such as 4K or 1080p) or when the client is handling multiple concurrent video windows. Overlapping windows can disrupt the hardware acceleration pathways, forcing the system to rely on software rendering, which significantly increases latency. To ensure a smooth "UHD video viewing" experience and to maintain the integrity of the visual data-which is necessary for identifying targets or verifying alarms-users should keep the video interface clear of obstructions. This best practice ensures that the frames are rendered sequentially and clearly, preventing the loss of critical detail during real-time monitoring.

NEW QUESTION # 17

Regarding the face deployment control operation of the intelligent vision platform, which of the following statements is wrong?

- A. After a face control alarm occurs, you can view the live and video playback to obtain more information when the control alarm occurs
- B. After the face control alarm occurs, you can view the corresponding alarm result on iClient
- C. If the face control task is set, there is no need to open the intelligent analysis task of face recognition on the platform
- D. When controlling the face, you need to upload the picture of the specific person to the platform or select the object to be controlled from the list library

Answer: C

NEW QUESTION # 18

Under normal circumstances, the video site adopts the wired network access method for better stability, and the wireless transmission method is usually used as a supplement to the wired method.

- A. True
- B. False

Answer: A

NEW QUESTION # 19

Which of the following conditions is not a requirement for the installation environment of intelligent traffic surveillance cameras?

- A. Try to avoid any liquid that can flow into the inside of the equipment
- B. Try to install on both sides of the road to get the best view
- C. Try to avoid installing near objects with strong reflective characteristics such as glass, floor tiles, water surfaces, leaves, road signs, billboards, etc.
- D. ambient brightness needs 70lux to 900lux between

Answer: B

NEW QUESTION # 20

Which of the following cannot be checked when the patrol function is running on the CSP?

- A. Hardware configuration
- B. Number of cameras connected
- C. Operating status of system resources
- D. Monitor the running status of the service

Answer: B
