In addition, we have three versions for JN0-105 Training Materials, and you can buy the most suitable in accordance with your own needs.

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q29-Q34):

### NEW QUESTION # 29

Your network infrastructure transports data, voice, and video traffic. Users are complaining that voice and video calls are not performing to their expectations.

In this scenario, which technology would you implement to improve voice and video performance on your network?

- A. CoS
- B. STP
- C. NAT

- D. IPv6

**Answer: A**

Explanation:

In a network that carries diverse types of traffic like data, voice, and video, ensuring the performance of latency-sensitive applications such as voice and video calls is crucial. Class of Service (CoS) is a technology designed to prioritize network traffic, ensuring that critical applications like voice and video receive the necessary bandwidth and minimal latency. CoS mechanisms can include traffic classification, traffic policing, queue management, and scheduling. By implementing CoS, network administrators can assign higher priority to voice and video traffic, thus improving their performance across the network and addressing the users' complaints about call quality.

**NEW QUESTION # 30**

You issue the telnet 10.10.10.1 source 192.168.100.1 command.

Which two statements are correct in this scenario? (Choose two.)

- A. The telnet session will have a destination address of 10.10.10.1.
- B. The telnet session will have a destination address of 192.168.100.1.
- C. The telnet session will have a source address of 192.168.100.1.
- D. The telnet session will have a source address of 10.10.10.1.

**Answer: A,C**

Explanation:

In the given telnet command, "telnet 10.10.10.1 source 192.168.100.1," the destination address of the telnet session is 10.10.10.1, and the source address of the session is specified as 192.168.100.1, making C and D the correct answers. This command instructs the telnet client to use the specified source IP address when establishing the connection to the destination.

**NEW QUESTION # 31**

Which two actions happen when multiple users issue the configure exclusive command to enter configuration mode on a Junos device? (Choose two.)

- A. Other users can enter configuration mode.
- B. Other users cannot enter configuration mode.
- C. The candidate configuration is unlocked.
- D. The candidate configuration is locked.

**Answer: B**

Explanation:

When a user enters configuration mode using the `configure exclusive` command on a Junos device, the candidate configuration is locked for that user, preventing other users from making concurrent configuration changes. This exclusive lock ensures that only one user can make changes at a time, preventing conflicts and potential errors from simultaneous modifications. Other users attempting to enter configuration mode while it is locked will receive a notification that the configuration is currently being edited by another user.

**NEW QUESTION # 32**

Exhibit

Exhibit

[edit]

root# set system host-name TEST\_DEVICE [edit]

root# commit

[edit]

'system'

Missing mandatory statement: 'root-authentication' error: commit failed: (missing mandatory statements) [edit] root# You are configuring a new device.

Which action solves the error shown in the exhibit?

- A. loading the factory-default configuration

- B. configuring a non-root username and password
- **C. configuring a password for the root account**
- D. reinstalling Junos

**Answer: C**

Explanation:

The error message in the exhibit indicates that the root-authentication statement is missing, which is mandatory for committing the configuration. In Junos OS, it is required to set a password for the root account to commit any configuration changes. This is a security measure to ensure that unauthorized users cannot access the device's configuration mode. To solve the error shown in the exhibit, configuring a password for the root account is necessary. This can be done by using the set system root-authentication plain-text-password command, after which the user will be prompted to enter a new password for the root account.

**NEW QUESTION # 33**

How many login classes are assignable to a user account?

- **A. 0**
- B. 1
- C. 2
- D. 3

**Answer: A**

Explanation:

<https://www.juniper.net/documentation/us/en/software/junos/user-access-evo/user-access/topics/topic-map/junos-os-login-class.html#:~:text=You%20can%20define%20any%20number,to%20an%20individual%20user%20account.>

In Junos OS, each user account can be assigned only one login class. Login classes in Junos OS define the permissions for users, controlling what they can access and modify within the system. This setup helps in maintaining a clear and secure access control mechanism.
