CompTIA Data+ Certification Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which of the following best describes how discrete data differs from continuous data?

- **A. Discrete data can only be a finite number of values.**
- B. Discrete data can have decimal points.
- C. Discrete data cannot create a sloped line.
- D. Discrete data applies only to numbers.

Answer: A

Explanation:

Discrete data are data that can only assume specific values that are countable and distinct. For example, the number of books, the number of heads in a coin toss, or the number of patients in a hospital are discrete data. Discrete data cannot have fractional or decimal values, and there are clear spaces between the possible values¹².

Continuous data are data that can assume any value within a range and can be meaningfully divided into smaller parts. For example, the weight, height, length, time, or temperature are continuous data. Continuous data can have fractional or decimal values, and there are infinite numbers of possible values between any two points¹².

NEW QUESTION # 32

A dataset requires an analysis for investigating and discovering abnormalities. Which of the following best describes the nature of the exploratory analysis conducted?

- A. Method of checking the quality of the data
- B. Best data tuning method
- C. Set of methods for cleaning the data
- **D. Summary of the data's main characteristics**

Answer: D

Explanation:

Exploratory Data Analysis (EDA) is a technique used to summarize the main characteristics of a dataset. It often involves using graphical representations and statistical summaries to uncover patterns, relationships, and anomalies in the data. Analysts perform EDA to detect outliers, missing values, and trends before proceeding with deeper data processing and modeling.

NEW QUESTION # 33

A data analyst is working with a data set and would like to combine two fields into a single field. Which of the following data manipulation techniques should the analyst use?

- A. Transpose
- **B. Concatenation**
- C. Data merge
- D. Data append

Answer: B

Explanation:

Combining two fields (e.g., FirstName and LastName into FullName) into a single field is known as concatenation:

* It typically joins strings together, often with a space or separator.

* Examples:

* In Excel: =A2 & " " & B2

* In SQL: FirstName || ' ' || LastName (or CONCAT(FirstName, ' ', LastName)) Why other options are incorrect:

* Data merge (A): Usually refers to joining datasets/tables based on keys, not combining two columns into one within a row.

* Transpose (B): Swaps rows and columns; it does not combine fields.

* Data append (C): Adds additional rows to a dataset (stacking), not combining columns within each row.

Thus, to combine two fields into a single field, the correct technique is Concatenation (D).

CompTIA Data+ Reference (concept alignment):

* DA0-001 Objectives - Data manipulation: basic transformation operations, including concatenating fields.

* Study material: examples in Excel/SQL where text fields are concatenated to create derived attributes.

NEW QUESTION # 34

A data analyst needs to create a weekly recurring report on sales performance and distribute it to all sales managers. Which of the following would be the BEST method to automate and ensure successful delivery for this task?

- A. Upload the report to the server.
- B. Implement subscription access delivery.
- C. Use scheduled report delivery.
- D. Print out a copy.

Answer: C

Explanation:

Scheduled report delivery is a feature that allows a data analyst to automate the generation and distribution of a report at a specified time and frequency. This would be the best method to ensure that the sales managers receive the weekly report on sales performance without manual intervention. Subscription access delivery is a feature that allows users to subscribe to a report and access it on demand, but it does not automate the delivery. Printing out a copy or uploading the report to the server are manual methods that require more time and effort from the data analyst. Reference: CertMaster Practice for Data+ Exam Prep - CompTIA
