

SPLK-4001 Test Tutorials - SPLK-4001 Valid Braindumps

BONUS!!! Download part of ActualTorrent SPLK-4001 dumps for free: https://drive.google.com/open?id=1Du2ilhCyd7UFFv6XD5p_NFNpBYR2EV9f

Our Splunk SPLK-4001 practice materials are suitable for exam candidates of different degrees, which are compatible whichever level of knowledge you are in this area. These Splunk SPLK-4001 Training Materials win honor for our company, and we treat Splunk SPLK-4001 test engine as our utmost privilege to help you achieve your goal.

You can also use the Splunk O11y Cloud Certified Metrics User PDF format using smartphones, tablets, and laptops. Since the PDF format of real dumps questions is portable, you can access it from any place in free time. The Splunk O11y Cloud Certified Metrics User web-based practice exam can be easily taken from every browser and operating system without installing additional software. The desktop Splunk O11y Cloud Certified Metrics User practice exam software comes with all specs of the Splunk SPLK-4001 web-based version but it works offline only on Windows computer or laptop.

SPLK-4001 Valid Braindumps, Braindump SPLK-4001 Pdf

If you want to find the best SPLK-4001 study materials, the first thing you need to do is to find a bank of questions that suits you. Our SPLK-4001 learning material is prepared by experts in strict accordance with the exam outline of the SPLK-4001 certification exam, whose main purpose is to help students to pass the exam with the least amount of time and effort. We can claim that if you study with our SPLK-4001 Practice Engine for 20 to 30 hours, then you will be sure to pass the exam.

Splunk O11y Cloud Certified Metrics User Sample Questions (Q13-Q18):

NEW QUESTION # 13

One server in a customer's data center is regularly restarting due to power supply issues. What type of dashboard could be used to view charts and create detectors for this server?

- A. Machine dashboard
- B. Multiple-service dashboard
- C. Server dashboard
- D. Single-instance dashboard

Answer: D

Explanation:

According to the Splunk O11y Cloud Certified Metrics User Track document1, a single-instance dashboard is a type of dashboard that displays charts and information for a single instance of a service or host. You can use a single-instance dashboard to monitor the performance and health of a specific server, such as the one that is restarting due to power supply issues. You can also create detectors for the metrics that are relevant to the server, such as CPU usage, memory usage, disk usage, and uptime. Therefore, option A is correct.

NEW QUESTION # 14

A customer is experiencing issues getting metrics from a new receiver they have configured in the OpenTelemetry Collector. How would the customer go about troubleshooting further with the logging exporter?

- A. Adding logging into the metrics receiver pipeline:
□
- B. Adding debug into the metrics exporter pipeline:
□
- C. Adding debug into the metrics receiver pipeline:
□
- D. Adding logging into the metrics exporter pipeline:
□

Answer: A

Explanation:

The correct answer is B. Adding logging into the metrics receiver pipeline.

The logging exporter is a component that allows the OpenTelemetry Collector to send traces, metrics, and logs directly to the console. It can be used to diagnose and troubleshoot issues with telemetry received and processed by the Collector, or to obtain samples for other purposes¹ To activate the logging exporter, you need to add it to the pipeline that you want to diagnose. In this case, since you are experiencing issues with a new receiver for metrics, you need to add the logging exporter to the metrics receiver pipeline. This will create a new plot that shows the metrics received by the Collector and any errors or warnings that might occur¹ The image that you have sent with your question shows how to add the logging exporter to the metrics receiver pipeline. You can see that the exporters section of the metrics pipeline includes logging as one of the options. This means that the metrics received by any of the receivers listed in the receivers section will be sent to the logging exporter as well as to any other exporters listed² To learn more about how to use the logging exporter in Splunk Observability Cloud, you can refer to this documentation¹.

1: <https://docs.splunk.com/Observability/gdi/opentelemetry/components/logging-exporter.html> 2:

NEW QUESTION # 15

The built-in Kubernetes Navigator includes which of the following?

- A. Map, Nodes, Processors, Node Detail, Workload Detail, Pod Detail, Container Detail
- B. Map, Clusters, Workloads, Node Detail, Workload Detail, Pod Detail, Container Detail
- C. Map, Nodes, Workloads, Node Detail, Workload Detail, Pod Detail, Container Detail
- D. Map, Nodes, Workloads, Node Detail, Workload Detail, Group Detail, Container Detail

Answer: C

Explanation:

Explanation

The correct answer is D. Map, Nodes, Workloads, Node Detail, Workload Detail, Pod Detail, Container Detail.

The built-in Kubernetes Navigator is a feature of Splunk Observability Cloud that provides a comprehensive and intuitive way to monitor the performance and health of Kubernetes environments. It includes the following views:

Map: A graphical representation of the Kubernetes cluster topology, showing the relationships and dependencies among nodes, pods, containers, and services. You can use the map to quickly identify and troubleshoot issues in your cluster¹ Nodes: A tabular view of all the nodes in your cluster, showing key metrics such as CPU utilization, memory usage, disk usage, and network traffic.

You can use the nodes view to compare and analyze the performance of different nodes¹ Workloads: A tabular view of all the workloads in your cluster, showing key metrics such as CPU utilization, memory usage, network traffic, and error rate. You can use the workloads view to compare and analyze the performance of different workloads, such as deployments, stateful sets, daemon sets, or jobs¹ Node Detail: A detailed view of a specific node in your cluster, showing key metrics and charts for CPU utilization, memory usage, disk usage, network traffic, and pod count. You can also see the list of pods running on the node and their status.

You can use the node detail view to drill down into the performance of a single node² Workload Detail: A detailed view of a specific workload in your cluster, showing key metrics and charts for CPU utilization, memory usage, network traffic, error rate, and pod count. You can also see the list of pods belonging to the workload and their status. You can use the workload detail view to drill down into the performance of a single workload² Pod Detail: A detailed view of a specific pod in your cluster, showing key metrics and charts for CPU utilization, memory usage, network traffic, error rate, and container count. You can also see the list of containers within the pod and their status. You can use the pod detail view to drill down into the performance of a single pod² Container Detail: A detailed view of a specific container in your cluster, showing key metrics and charts for CPU utilization, memory usage, network

traffic, error rate, and log events. You can use the container detail view to drill down into the performance of a single container² To learn more about how to use Kubernetes Navigator in Splunk Observability Cloud, you can refer to this documentation³.

NEW QUESTION # 16

Clicking a metric name from the results in metric finder displays the metric in Chart Builder. What action needs to be taken in order to save the chart created in the UI?

- A. Save the chart to a dashboard.
- B. Make sure that data is coming in for the metric then save the chart.
- C. Create a new dashboard and save the chart.
- D. Save the chart to multiple dashboards.

Answer: A

Explanation:

According to the web search results, clicking a metric name from the results in metric finder displays the metric in Chart Builder¹. Chart Builder is a tool that allows you to create and customize charts using metrics, dimensions, and analytics functions². To save the chart created in the UI, you need to do the following steps:

Click the Save button on the top right corner of the Chart Builder. This will open a dialog box where you can enter the chart name and description, and choose the dashboard where you want to save the chart.

Enter a name and a description for your chart. The name should be descriptive and unique, and the description should explain the purpose and meaning of the chart.

Choose an existing dashboard from the drop-down menu, or create a new dashboard by clicking the + icon. A dashboard is a collection of charts that display metrics and events for your services or hosts³. You can organize and share dashboards with other users in your organization using dashboard groups³.

Click Save. This will save your chart to the selected dashboard and redirect you to the dashboard view. You can also access your saved chart from the Dashboards menu on the left navigation bar.

NEW QUESTION # 17

A customer is experiencing issues getting metrics from a new receiver they have configured in the OpenTelemetry Collector. How would the customer go about troubleshooting further with the logging exporter?

- A. Adding debug into the metrics exporter pipeline:
- B. Adding debug into the metrics receiver pipeline:
- C. Adding logging into the metrics receiver pipeline:
- D. Adding logging into the metrics exporter pipeline:

Answer: C

Explanation:

Explanation

The correct answer is B. Adding logging into the metrics receiver pipeline.

The logging exporter is a component that allows the OpenTelemetry Collector to send traces, metrics, and logs directly to the console. It can be used to diagnose and troubleshoot issues with telemetry received and processed by the Collector, or to obtain samples for other purposes¹ To activate the logging exporter, you need to add it to the pipeline that you want to diagnose. In this case, since you are experiencing issues with a new receiver for metrics, you need to add the logging exporter to the metrics receiver pipeline. This will create a new plot that shows the metrics received by the Collector and any errors or warnings that might occur¹ The image that you have sent with your question shows how to add the logging exporter to the metrics receiver pipeline. You can see that the exporters section of the metrics pipeline includes logging as one of the options.

This means that the metrics received by any of the receivers listed in the receivers section will be sent to the logging exporter as well as to any other exporters listed² To learn more about how to use the logging exporter in Splunk Observability Cloud, you can refer to this documentation¹.
