### EMC Dell Midrange Storage Solutions Design 2023 Sample Questions (Q50-Q55):

#### NEW QUESTION # 50

What is done during the preconfigure step of a PowerStore block import migration?

- A. Import schedule is set
- B. Network connectivity is set up
- C. Destination volume is created
- D. Source system is added to the PowerStore

**Answer: A,B,C,D**

#### NEW QUESTION # 51

What is the maximum number of thin clones per base LUN within Dell Unity XT?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: D**

Explanation:

The maximum number of thin clones per base LUN within Dell Unity XT is 32. Thin clones are efficient copies of a LUN (Logical Unit Number) that share the same underlying storage blocks, allowing for quick and space-saving creation of additional LUNs based on the same data.

#### NEW QUESTION # 52

A customer has a data center with 30 different applications running on 30 volumes presented from PowerStore. They want to design a DR site within 300 km with 15 min RPO using storage-based asynchronous replication. Which protection policy design leads to most stable storage performance?

- A. Create 15 protection policies that are assigned to a pair of volumes, each scheduled with a one minute shift from each other.
- B. Create two protection policies that are assigned to 15 volumes, each scheduled with a five minute shift from each other.
- C. Create a single protection policy assigned to 30 volumes, each scheduled with a five minute shift from each other.
- D. Create 30 protection policies that are assigned to a single volume, each scheduled with a one minute shift from each other.

**Answer: C**

Explanation:

In a scenario where a customer needs to design a DR site with a 15-minute RPO using storage-based asynchronous replication, creating a single protection policy assigned to 30 volumes with a five-minute shift between each volume is the most stable design. This approach ensures that the replication load is evenly distributed over time, minimizing the impact on storage performance.

### NEW QUESTION # 53

What is a consequence of using a 1.6 TB drive and five 400 GB drives in a Dell EMC Unity XT dynamic pool?

- A. Extents 9 - 19 are marked unavailable until more 1.6 TB drives are added
- B. Unisphere short strokes the 1.6 TB drive to 8 extents
- C. Extents 9 - 19 are marked unavailable and can never be recovered
- D. Extents 9 - 19 are used to create the RAID Group

**Answer: A**

### NEW QUESTION # 54

What is done during the preconfigure step of a PowerStore block import migration?

- A. Destination volume is created.
- B. Import schedule is set.
- C. Source system is added to the PowerStore.
- D. Network connectivity is set up.

**Answer: D**

Explanation:

During the preconfigure step of a PowerStore block import migration, network connectivity is set up. This step is crucial for ensuring that the source system can communicate with the PowerStore system, which is necessary for a successful data transfer during the migration process. Here are the detailed steps involved in this phase:

\* Assess Network Requirements: Evaluate the existing network infrastructure to ensure it meets the requirements for a PowerStore migration. This includes checking the bandwidth, latency, and network topology.

\* Configure Network Settings: Set up the network settings on both the source and destination systems.

This involves configuring IP addresses, subnet masks, gateways, and any other network parameters required for connectivity.

\* Verify Connectivity: Use network diagnostic tools to verify that the source system can communicate with the PowerStore system. This might involve ping tests, traceroutes, and other connectivity checks.

\* Secure the Network: Implement necessary security measures to protect the data during migration. This can include setting up firewalls, VPNs, or other security protocols to ensure data integrity and confidentiality.

\* Establish Data Paths: Create and configure data paths between the source system and the PowerStore system. This ensures that data can be transferred efficiently and without interruption during the migration process.

\* Test Network Performance: Conduct performance tests to ensure that the network can handle the data transfer load. This helps identify and mitigate any potential bottlenecks that could affect the migration.
