## Plat-Admn-202 Exam Simulation: Salesforce Certified Platform App Builder & Plat-Admn-202 Training Materials

Because the busy people seldom have much time to read the books they need. So how should people get their dreaming Plat-Admn-202 certification by passing the exam? At this time, people should to need some good Plat-Admn-202 study materials. Not only will our Plat-Admn-202 Exam Questions help you pass exam, but it will also save your valuable time. Now you can free download the demos of our Plat-Admn-202 exam questions to have an experience the good quality and validity.

## Salesforce Certified Platform App Builder Sample Questions (Q128-Q133):

### NEW QUESTION # 128

Universal Containers generates leads from three different sources: web, trade shows, and partners. Some of the information collected is applicable to all sources, there is also information that is unique to each type of lead. What should an app builder configure to meet these requirements?

- A. Create a partner community and a record type for web and trade show leads
- B. Create custom page payouts for each type of lead only containing the relevant fields
- C. Create three sections on the lead layout and instruct users to collapse the non-relevant fields
- D. Create three lead record types each with its own page layout containing the relevant fields

**Answer: D**

Explanation:

The solution that the app builder should configure to meet these requirements is creating three lead record types each with its own page layout containing the relevant fields. This way, the app builder can customize the fields and sections that appear on each record type based on the source of the lead. Option B is incorrect because creating a partner community and a record type for web and trade show leads does not address the requirement of collecting information that is unique to each type of lead, as partner community users may have different fields and layouts than internal users. Option C is incorrect because creating three sections on the lead

layout and instructing users to collapse the non-relevant fields does not address the requirement of collecting information that is unique to each type of lead, as users may still see or enter data in the wrong fields. Option D is incorrect because creating custom page layouts for each type of lead only containing the relevant fields does not address the requirement of collecting information that is applicable to all sources, as users may miss some common fields.

#### NEW QUESTION # 129

An app builder wants to create a report to compare the number of support cases in each status (New, In-progress, or Closed) and by priority (Critical, High, Medium, or Low). What solution should be used for the report?

- A. Custom Report Type
- B. Filters
- C. Bucket Columns
- D. Grouping

**Answer: D**

Explanation:

The best solution to create a report to compare the number of support cases in each status and by priority is to use grouping. Grouping allows the app builder to summarize data by one or more fields, such as status and priority, and display them in rows and columns. Grouping also enables the app builder to use different chart types, such as stacked bar charts or matrix charts, to visualize the data. Bucket columns are not a suitable solution, as they are used to categorize data into predefined groups, such as high, medium, or low. Custom report types are not a suitable solution, as they are used to define the objects and fields available for a report, not how to display them. Filters are not a suitable solution, as they are used to limit the data shown in a report based on certain criteria, not how to compare them

#### NEW QUESTION # 130

Cloud Kicks is redefining its entire business process to convert the Manager Notes field from a long text area field. The goal is to encourage managers to be more concise in their comments and stay at 255 characters or less. There is preexisting information in the Manager Notes field that often is well beyond the character limit.

What would happen to any existing information if the app builder tries to convert a preexisting long text area field to text area?

- A. Preexisting information will truncate to the first 255 characters.
- B. Preexisting information will cause an error message to pop up.
- C. Preexisting information will remain even if it was over 255 characters.
- D. Preexisting information in the field will be completely lost.

**Answer: A**

Explanation:

If the app builder tries to convert a preexisting long text area field to text area, preexisting information will truncate to the first 255 characters. This means that any information beyond 255 characters will be lost. Option B is incorrect because preexisting information will not remain if it was over 255 characters. Option C is incorrect because preexisting information will not cause an error message to pop up. Option D is incorrect because preexisting information in the field will not be completely lost, only truncated.

#### NEW QUESTION # 131

Cloud Kicks (CK) is finding sales reps are inconsistent in data entry when deals are won. CK requires that custom shoes are shipped within two weeks after the close date. A custom field called Scheduled Ship Date on the opportunity records the ship date. How should the app builder ensure this field is properly filled out before setting the opportunity to closed won?

- A. `OR(ISPICKVAL( StageName , "Closed Won") && ( Scheduled_Ship_Date__c - CloseDate ) > 14, ISBLANK( Scheduled_Ship_Date__c ) )`
- B. `ISPICKVAL( StageName , "Closed Won") && ( Scheduled_Ship_Date__c - CloseDate ) > 14`
- C. `ISPICKVAL( StageName = "Closed Won" ) > 14, ISBLANK( Scheduled_Ship_Date__c ) > 14`
- D. `OR(ISPICKVAL( StageName = "Closed Won") && ( Scheduled_Ship_Date__c - CloseDate ) > 14, ISBLANK( Scheduled_Ship_Date__c ) )`

**Answer: A**

Explanation:

The correct validation rule formula to ensure that the Scheduled Ship Date field is properly filled out before setting the Opportunity to Closed Won is:

OR(ISPICKVAL( StageName ,"Closed Won") && (

Scheduled\_Ship\_Date\_cCloseDate)>14,ISBLANK(Scheduled\_Ship\_Date\_c)) This formula checks two conditions: if the StageName is Closed Won and the Scheduled Ship Date is more than 14 days after the Close Date, or if the Scheduled Ship Date is blank. If either condition is true, the validation rule will fire and prevent saving the record. The other formulas are incorrect because they either use incorrect syntax (such as "=" instead of ">," or missing parentheses) or incorrect logic (such as checking if the Scheduled Ship Date is less than 14 days after the Close Date)

### NEW QUESTION # 132

When an opportunity close date is delayed by more than 60 days, the manager and the VP sales must approve the change. How can this requirement be met? Choose 2 answers

- A. Build a validation rule that does not allow a user to save the opportunity record.
- B. Build an approval process that requires unanimous approval from the manager and VP of sales.
- C. Create a workflow rule that checks for close date less than 60 days and add an email alert.
- D. Create a lightning process builder flow that submits the record for an approval process

**Answer: B,D**

Explanation:

The requirement can be met by using a combination of process builder and approval process. The process builder can be used to trigger the approval process when the close date is delayed by more than 60 days. The approval process can be configured to require unanimous approval from the manager and VP of sales.

### NEW QUESTION # 133

.....

Before you place orders, you can download the free demos of Plat-Admn-202 practice test as experimental acquaintance. Once you decide to buy, you will have many benefits like free update lasting one-year and convenient payment mode. We will inform you immediately once there are latest versions of Plat-Admn-202 Test Question released. And if you get any questions, please get contact with us, our staff will be online 24/7 to solve your problems all the way.
