Understanding functional and technical aspects of GIAC Reverse Engineering Malware (GREM)

The following will be discussed in **GIAC GREM Exam Dumps**:

- Assembling a toolkit for effective malware analysis
- Performing behavioral analysis of malicious Windows executables
- Build an isolated, controlled laboratory environment for analyzing the code and behavior of malicious programs
- Employ network and system-monitoring tools to examine how malware interacts with the file system, registry, network, and

other processes in a Windows environment
- Assess the threat associated with malicious documents, such as PDF and Microsoft Office files
- Control relevant aspects of the malicious program's behavior through network traffic interception and code patching to perform effective malware analysis
- Bypass a variety of packers and other defensive mechanisms designed by malware authors to misdirect, confuse, and otherwise slow down the analyst
- Interacting with malware in a lab to derive additional behavioral characteristics
- Performing dynamic code analysis of malicious Windows executables
- Uncover and analyze malicious JavaScript and other components of web pages, which are often used by exploit kits for drive-by attacks
- Recognize and understand common assembly-level patterns in malicious code, such as code L injection, API hooking, and anti-analysis measures
- Use a disassembler and a debugger to examine the inner workings of malicious Windows executables
