## JN0-224 Exam Torrent & Lab JN0-224 Questions

With ValidExam, you can trust that you're accessing authentic and error-free JN0-224 exam practice questions. These questions are available in three different formats: PDF questions files, desktop practice test software, and web-based practice test software. All three formats contain genuine JN0-224 Practice Questions that will effectively prepare you for the final exam.

### Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q45-Q50):

#### NEW QUESTION # 45

Which two statements about the REST API are correct? (Choose two.)

- A. The REST API application is stateless.
- B. The TCP session state is maintained by the client
- C. The TCP session state is maintained by the server.
- D. The REST API application is stateful.

**Answer: A,B**

Explanation:

REST (Representational State Transfer) is an architectural style for designing networked applications, and its key principles include: Statelessness (B): Each request from the client to the server must contain all the information needed to understand and process the request. The server does not store any session state between requests, meaning each request is independent and does not rely on previous ones.

TCP Session State (C): While REST itself is stateless, the underlying TCP connection's state, such as keeping the connection alive or managing retries, is handled by the client. The server does not retain information about the TCP connection beyond the processing of the individual request.

Options A and D are incorrect because they imply that the REST API is stateful, which contradicts the stateless nature of REST.

Reference:

REST API Design Principles: Describes the stateless nature of REST and the responsibility of clients in managing session state.

Web Development Documentation: Discusses how REST APIs operate, focusing on statelessness and client-server interaction.

#### NEW QUESTION # 46

You must use Junos PyEZ to configure unique IP addresses on individual machines.

Which two features will permit this requirement? (Choose). I an SCP module

- A. a Jinja2 template
- B. a YAML data file
- C. an SCP module
- D. a BSON data file

**Answer: A,B**

Explanation:

To configure unique IP addresses on individual machines using Junos PyEZ, you can use the following features:

YAML Data File (C): YAML files are used to store configuration data in a human-readable format. They are often used in

combination with Jinja2 templates to provide the data necessary for template rendering.

Jinja2 Template (D): Jinja2 is a templating engine for Python that allows you to create dynamic templates. When used with Junos PyEZ, a Jinja2 template can be filled with data (such as IP addresses from a YAML file) to generate configuration snippets that are applied to different devices.

Options A (SCP module) and B (BSON data file) are not typically used with Junos PyEZ for this purpose.

Reference:

Junos PyEZ Documentation: Discusses the use of YAML files and Jinja2 templates for generating configurations.

Jinja2 Templating Documentation: Provides details on how to create and use templates in Python scripts.

#### NEW QUESTION # 47

Which two statements about Junos automation are correct? (Choose two.)

- A. Junos automation does not allow for device provisioning through the console port.
- **B. The Junos REST API client is on-box.**
- C. The Junos REST API client is off-box.
- **D. Junos automation allows for device provisioning through the console port.**

**Answer: B,D**

#### NEW QUESTION # 48

Junos supports which two APIs for on-box scripting? (Choose two.)

- **A. XML**
- **B. JET**
- C. Puppet
- D. Chef

**Answer: A,B**

Explanation:

Juniper Networks' Junos operating system supports several APIs for on-box scripting, two of which are:

JET (Juniper Extension Toolkit): JET is a modern API framework that provides a programmable interface for interacting with Junos. It allows developers to create custom applications that run directly on Junos devices, enabling the automation of network operations. JET provides both a gRPC and a REST API interface, allowing for flexible integration with external systems.

XML API: The Junos XML API allows direct interaction with the Junos OS through XML-based requests. This API can be used to retrieve information, configure devices, and execute commands on Junos devices. The XML API is crucial for automation tasks as it provides a structured and consistent way to interact with the device's configuration and operational data.

Detailed Explanation:

JET (A) provides high-performance access to Junos routing, switching, and service elements via programmable interfaces. It is highly used for creating custom applications that require tight integration with the Junos OS.

XML (C), on the other hand, is a well-established method for interacting with Junos, especially for legacy systems or when working within environments where XML is the standard data format.

Other options like Puppet (B) and Chef (D) are not APIs provided by Junos for on-box scripting but are configuration management tools used externally to manage Junos devices.

Reference:

Juniper Networks JET Documentation: Provides details on how to leverage JET APIs for automation.

Junos XML Management Protocol Guide: Describes how to use XML for scripting and automating tasks in Junos.

These APIs are key components of Juniper's automation strategy, allowing for scalable, flexible, and efficient network operations.

#### NEW QUESTION # 49

Junos PyEZ tables are formatted using which file type?

- **A. YAML**
- B. SON
- C. IXML
- D. txt

**Answer: A**

**Explanation:**

Junos PyEZ uses YAML (YAML Ain't Markup Language) files to define the format for tables and views when working with operational and configuration data. YAML is a human-readable data format that is commonly used for configuration files, making it suitable for defining data structures in PyEZ.

Option B (YAML) is correct because PyEZ tables are defined using YAML files.

Options A (JSON), C (txt), and D (IXML) are incorrect in this context, as YAML is the standard format used.

**Supporting Reference:**

Junos PyEZ Tables Documentation: Explains the use of YAML files for formatting tables and views in Junos PyEZ.
