Exam EMEA-Advanced-Support Registration | Valid EMEA-Advanced-Support Exam Tutorial

As we all know, the latest EMEA-Advanced-Support quiz prep has been widely spread since we entered into a new computer era.

The cruelty of the competition reflects that those who are ambitious to keep a foothold in the job market desire to get the EMEA-Advanced-Support certification. It's worth mentioning that our working staff considered as the world-class workforce, have been persisting in researching EMEA-Advanced-Support Test Prep for many years. Our EMEA-Advanced-Support exam guide engage our working staff in understanding customers' diverse and evolving expectations and incorporate that understanding into our strategies. Our latest EMEA-Advanced-Support quiz prep aim at assisting you to pass the EMEA-Advanced-Support exam and making you ahead of others.

Fortinet EMEA Advanced Support Exam Sample Questions (Q36-Q41):

NEW QUESTION # 36

What is the role of the FortiGate 'set srcintf' command in a firewall policy?

- A. Sets the source IP address range
- B. Configures the source NAT interface
- C. Specifies the source interface for traffic matching
- D. Defines the destination interface for traffic

Answer: C

Explanation:

The 'set srcintf' command in a FortiGate firewall policy specifies the source interface from which traffic originates, helping define the policy's scope. It does not set the destination interface (B), source IP range (C), or NAT interface (D). Exact extract: "The 'set srcintf' command in a firewall policy specifies the source interface for incoming traffic, allowing FortiGate to match packets based on their entry interface."

NEW QUESTION # 37

Which FortiGate log type records denied traffic events?

- A. System Log
- B. Security Log
- C. Event Log
- D. Traffic Log

Answer: D

Explanation:

Traffic Logs in FortiGate record all traffic events, including denied packets, with details like source, destination, and policy ID. Security Logs (B) cover UTM events, Event Logs (C) system events, and System Logs (D) hardware or system status, not specifically denied traffic. Exact extract: "Traffic Logs record all packet activity, including allowed and denied traffic, with details such as source/destination IPs, ports, and the firewall policy applied."

NEW QUESTION # 38

What does the below route indicate?

- A. It is a dummy route in the routing table
- B. The device does not know the destination
- C. The destination network is locally connected on that interface
- D. The destination network can be reached via any gates

Answer: C

Explanation:

A route with a directly connected interface (no gateway) indicates the destination network is locally attached to that interface on the FortiGate. This is common for networks directly connected to the device's interfaces.

Option A is vague, B is incorrect as it's not a dummy route, and D suggests an unknown route, which isn't the case. Exact extract: "A directly connected route indicates that the destination network is locally attached to the interface specified in the routing table... No gateway is required for such routes as the FortiGate is directly connected to the network."

NEW QUESTION # 39

Which FortiGate feature supports load balancing across multiple WAN links?

- **A. SD-WAN**
- B. Link Aggregation
- C. Virtual Routing
- D. Multi-Path Routing

Answer: A

Explanation:

FortiGate's SD-WAN feature enables load balancing and intelligent traffic steering across multiple WAN links based on criteria like bandwidth, latency, or application. Link Aggregation (B) bonds interfaces, Virtual Routing (C) is VRF, and Multi-Path Routing (D) is not a standard term. Exact extract: "SD-WAN enables load balancing and traffic steering across multiple WAN links, optimizing performance and reliability based on configured rules and metrics."

NEW QUESTION # 40

TCP protocol can be used for data delivery via multicast

- **A. No**
- B. Yes

Answer: A

Explanation:

TCP is a unicast, connection-oriented protocol that ensures reliable data delivery between two endpoints using sequence numbers and acknowledgments. Multicast, which sends data to multiple recipients, is supported by UDP, not TCP, due to TCP's requirement for a direct connection. Fortinet devices handle multicast traffic via UDP-based protocols like IGMP or PIM. Exact extract: "TCP is a unicast protocol that establishes a reliable connection between two devices... Multicast traffic, such as streaming or group communications, relies on UDP, as TCP does not support multicast delivery."

NEW QUESTION # 41

.....

We respect different propensity of exam candidates, so there are totally three versions of EMEA-Advanced-Support guide dumps for your reference. The PDF version of EMEA-Advanced-Support practice materials helps you read content easier at your process of studying with clear arrangement and the PC Test Engine version of EMEA-Advanced-Support real test allows you to take simulative exam. Besides, the APP version of our practice materials, you can learn anywhere at any time with EMEA-Advanced-Support study guide by your electronic devices.
