NEW QUESTION # 97

What is the purpose of the apirouter element in APIkit?

- **A. Validates requests against RAML API specifications and routes them to API implementations**
- B. Validates responses returned from API requests and routes them back to the caller
- C. Serves as an API implementation
- D. Creates native connectors using a 3rd party Java library

Answer: A

Explanation:

The APIkit Router is a key message processor that validates requests against the provided definition, enriches messages (for example by adding default values to the messages) and routes requests to a particular flow.

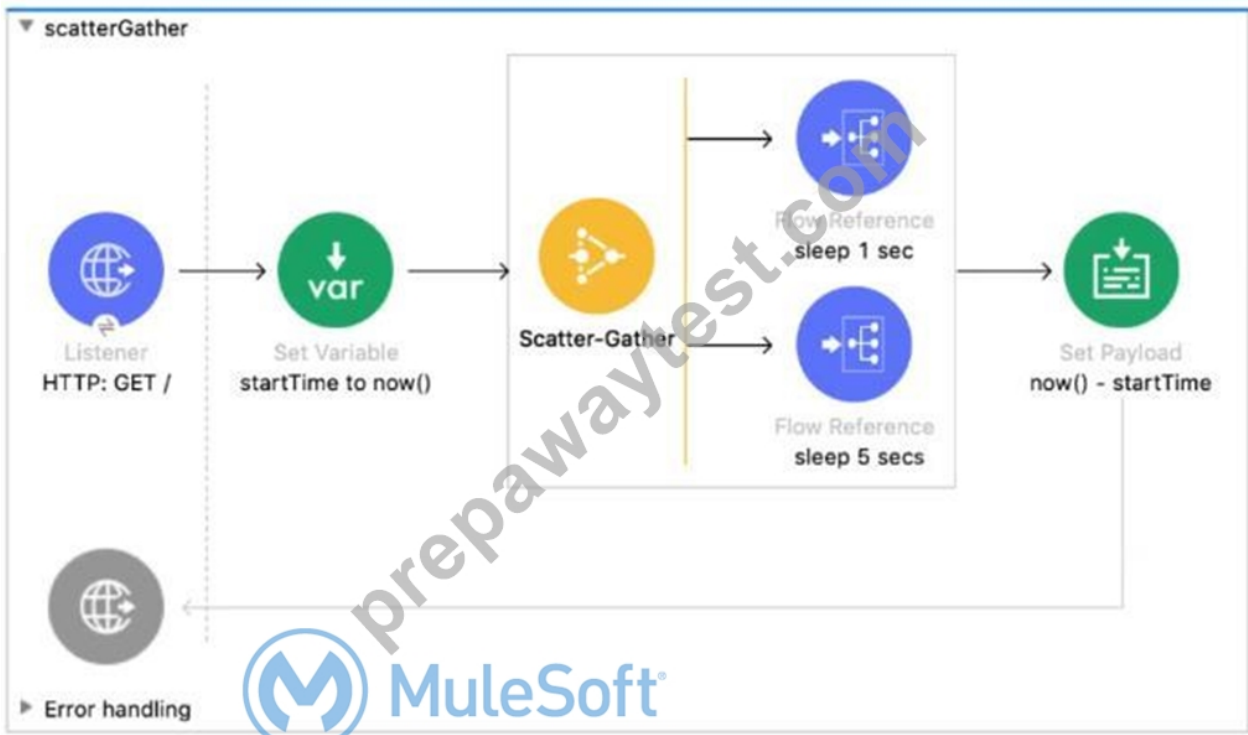

Also, the Router raises error messages if errors occur while routing, validating or processing the user request.
