Test Mule-Dev-202 Assessment: Salesforce Certified MuleSoft Hyperautomation Developer

P.S. Free 2026 Salesforce Mule-Dev-202 dumps are available on Google Drive shared by TestKingIT:
<https://drive.google.com/open?id=1Oyexws6ySONJKoFTIMCCzOf-Obis-3IN>

TestKingIT site has a long history of providing Salesforce Mule-Dev-202 exam certification training materials. It has been a long time in certified IT industry with well-known position and visibility. Our Salesforce Mule-Dev-202 exam training materials contains questions and answers. Our experienced team of IT experts through their own knowledge and experience continue to explore the exam information. It contains the real exam questions, if you want to participate in the Salesforce Mule-Dev-202 examination certification, select TestKingIT is unquestionable choice.

We have accommodating group offering help 24/7. It is our responsibility to aid you through those challenges ahead of you. So instead of focusing on the high quality Mule-Dev-202 latest material only, our staff is genial and patient to your questions of our Mule-Dev-202 real questions. It is our obligation to offer help for your trust and preference. Besides, you can have an experimental look of demos and get more information of Mule-Dev-202 Real Questions. The customer-service staff will be with you all the time to smooth your acquaintance of our Mule-Dev-202 latest material.

Test Mule-Dev-202 Assessment | Valid Dumps Mule-Dev-202 Ppt

Just like the saying goes, it is good to learn at another man's cost. In the process of learning, it is more important for all people to have a good command of the method from other people. The Salesforce Certified MuleSoft Hyperautomation Developer exam questions from our company will help you find the good study method from other people. Using the Mule-Dev-202 Test Guide from our company, you can not only pass your exam, but also you will have the chance to learn about the different and suitable study skills. We believe these skills will be very useful for you near life.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q18-Q23):

NEW QUESTION # 18

An AnyAirlines employee regularly performs a manual process to extract customer and flight information from multiple legacy systems. AnyAirlines recently purchased MuleSoft automation and wants to automate this process using MuleSoft RPA. During an evaluation of the candidate RPA process, which two key qualifiers should be considered? (Choose two.)

- A. Is the process data-driven?
- B. Is the process rule-based?
- C. Is the process risky?
- D. Is the process speed-sensitive?

Answer: A,B

Explanation:

When evaluating a candidate process for RPA automation using MuleSoft RPA, consider the following key qualifiers:

Is the Process Rule-Based?:

RPA is well-suited for processes that follow clear, predefined rules. If the process involves repetitive tasks with defined rules and decision points, it is a good candidate for RPA automation.

Rule-based processes can be accurately automated by RPA bots without the need for complex decision-making.

Is the Process Data-Driven?:

Data-driven processes involve manipulating, transferring, and extracting data, making them ideal for RPA automation.

If the manual process involves working with structured data (e.g., extracting customer and flight information), it is a good fit for RPA, as bots can efficiently handle data operations.

Other considerations like risk and speed sensitivity are also important but focusing on rule-based and data-driven aspects ensures that the process is structured and systematic, making it easier to automate reliably.

NEW QUESTION # 19

Northern Trail Outfitters needs to develop an application network that follows a MuleSoft-recommended, API-led connectivity approach and meets the following requirements:

provides data to mobile and web interfaces

aggregates and transforms data

retrieves data from databases

In which API tier should the data aggregation and transformation take place?

- A. Business
- **B. Process**
- C. Experience
- D. System

Answer: B

Explanation:

API-led Connectivity: MuleSoft's API-led connectivity approach divides APIs into three tiers: System, Process, and Experience. Each tier has a specific role in managing data and operations.

Reference: MuleSoft API-led Connectivity

Experience APIs: These APIs are designed to provide data to end-user interfaces, such as mobile and web applications. They typically format the data in a way that is easy for the user interface to consume.

Reference: Experience API Definition

Process APIs: Process APIs are responsible for orchestrating and executing business logic. They aggregate, transform, and process data from multiple sources before passing it to Experience APIs or other downstream systems.

Reference: Process API Role

System APIs: These APIs provide direct access to core systems and data sources. They handle CRUD (Create, Read, Update, Delete) operations and expose data from underlying systems.

Reference: System API Role

Data Aggregation and Transformation: Given the requirements to aggregate and transform data, the Process tier is the appropriate place. Process APIs handle complex business logic and data transformation, making them ideal for aggregating data from multiple sources and transforming it as needed.

Reference: Process APIs and Data Transformation

NEW QUESTION # 20

Northern Trail Outfitters has deployed a MuleSoft RPA process to automate the extraction of sales data from CSV files. To integrate this RPA process with Sales Cloud, an action step is created that calls this RPA process in a MuleSoft Composer flow. Which next step must be added to the flow to make use of the RPA process results?

- A. For Each loop
- B. Create Record action in Sales Cloud
- C. If/Else block
- **D. Create or Update Record action in Sales Cloud**

Answer: D

Explanation:

To integrate an RPA process that extracts sales data from CSV files with Sales Cloud using MuleSoft Composer, you need to take the following steps:

Invoke RPA Process:

Create an action step in the MuleSoft Composer flow that calls the RPA process to extract the sales data from the CSV files.

Next Step - Create or Update Record:

After the RPA process completes and returns the extracted data, the next step in the flow should be to update Sales Cloud with the new information.

Use the Create or Update Record action to insert the new sales data into Sales Cloud. This action ensures that existing records are updated if they already exist, or new records are created if they don't.

This approach ensures that the results from the RPA process are correctly reflected in Sales Cloud.

NEW QUESTION # 21

The MuleSoft development team at Northern Trail Outfitters creates a Mule application that interacts with several APIs and RPA processes. The team needs to share this application with other teams to help them create similar applications.

How should the Mule application be published in Anypoint Exchange to meet this requirement?

- **A. Template asset**
- B. API asset
- C. Custom asset
- D. Connector asset

Answer: A

Explanation:

To share a Mule application that interacts with several APIs and RPA processes with other teams for creating similar applications, publishing it as a Template asset is the best approach:

Template Asset:

A Template in Anypoint Exchange is designed to provide a reusable solution that can be easily adapted for different use cases. It includes predefined integration logic and configurations that can be used as a starting point for new projects.

By publishing the Mule application as a Template, other teams can leverage this pre-built solution, customize it to their specific needs, and ensure consistency in integration practices across the organization.

NEW QUESTION # 22

Which API policy can be applied to limit the number of requests an individual client can make to an API?

- **A. Rate limiting - SLA-Based**
- B. Spike Control
- C. OAuth 2.0 access token enforcement
- D. Client ID Enforcement

Answer: A

Explanation:

The Rate Limiting - SLA-Based policy in Anypoint Platform is designed to control the number of requests an individual client can make to an API. This policy is highly configurable and allows you to set specific limits based on service level agreements (SLAs).

Rate Limiting - SLA-Based:

This policy helps protect APIs from being overwhelmed by too many requests by enforcing a limit on the number of requests a client can make within a specified time frame.

You can define different rate limits for different tiers of clients, ensuring fair usage and protecting backend services.
