## ISTQB Certified Tester Usability Tester Sample Questions (Q11-Q16):

### NEW QUESTION # 11

Your project manager asked you for your advice. A recent project failed because the users were not satisfied with the final product, although your project manager claimed that she followed the human-centered design process. She interviewed users at the start of the project, created a first prototype and evaluated that prototype.

Which part of the human-centered design process did she miss?

- A. The "design"-part
- B. The "iterate"-part
- C. The "evaluate"-part
- D. The "analyze"-part

**Answer: B**

Explanation:

The human-centered design process emphasizes iterative development-testing and refining designs through multiple cycles. In the scenario, the project manager interviewed users and evaluated a prototype but did not iterate based on feedback. Skipping iteration likely resulted in unmet user needs. Human-centered design, per ISO 9241-210, includes: understanding context of use, specifying requirements, producing design solutions, and evaluating-repeated iteratively. Hence, option D ("iterate") is correct.

### NEW QUESTION # 12

Your last 20-pages usability test report wasn't received well by the developers; only two of the 25 usability problems have been fixed. This time, you want to stick to the best practices in order to obtain better acceptance by the development team.

What are you going to do differently this time?

- A. Include positive findings in the report, not only usability problems
- B. Add the low-priority findings you didn't include in the first report
- C. Include contact details of the test participants so that the development team can contact them in case they have questions
- D. Make the report more detailed and longer

**Answer: A**

Explanation:

Usability test reports are more effective when they are balanced and include not only problems but also what worked well. Including positive findings increases credibility, encourages the development team, and helps them understand what should remain unchanged. Option B violates privacy and ethical standards. Option C may dilute focus, and D could worsen the problem by making the report less accessible. Thus, the best practice supported by usability.gov and Nielsen Norman Group is to include both positive and negative findings.

### NEW QUESTION # 13

During a usability test, a user suggested that a quick search box on every page would help a lot for several of the main tasks. You added this finding to the list.

What's the correct classification for these kinds of findings?

- A. Usability problem
- B. Functional problem
- C. Positive finding
- D. Good idea

**Answer: D**

Explanation:

In usability evaluations, a distinction is made between actual usability problems (where a user struggles to complete a task or is confused by the interface) and suggestions or ideas that users provide based on their preferences or perceived improvements. When a participant offers a new feature idea (such as a quick search box), this is classified as a "good idea" or "feature suggestion," not necessarily a usability problem. It may inform future design enhancements but does not indicate a failure in usability for existing functionality.

### NEW QUESTION # 14

A large customer complained that a business application developed by your company sometimes transfers the wrong amount of money to clients, although there are no complaints of the actual users. The expected amount differs from the actually transferred amount by a factor of 10 or 100. After analyzing the log files, you found out that the application itself works fine. The problem seems to be caused by confusing text fields and labels for the decimal place, leading to user errors.

Which usability risk should be reasonably addressed for the next release?

- A. Increased liability through risk to financial loss caused by a poorly designed or deceptive user interface
- B. Users resist using a software product which is essential for their daily work because it lacks usability
- C. Users buy the software product but repeatedly need to call support because they don't understand how to use it
- D. Users won't buy or use the software product because it lacks effectiveness, efficiency or satisfaction

**Answer: A**

Explanation:

The scenario describes a situation where the interface misleads users into making serious financial mistakes due to poor design, such as confusing decimal separators. Even though the system functions correctly, it facilitates critical user errors. This constitutes a major

usability risk with potential legal and financial consequences. Therefore, the correct risk to address is increased liability due to financial loss caused by a poorly designed or deceptive interface (option D). The other options focus on usability-related dissatisfaction, resistance, or lack of adoption, which are not the key concern in this scenario.

### NEW QUESTION # 15

Which of the following elements are addressed by the WCAG?

- i. Resizability of text
- ii. Visually appealing design
- iii. Text alternatives
- iv. Keyboard accessibility
- v. Mouse input

- A. i & iii are true, ii, iv & v are false
- B. i, iii, iv & v are true, ii is false
- C. i, ii, & iii are true, iv & v are false
- D. iv & v are true, i, ii & iii are false

**Answer: B**

Explanation:

The Web Content Accessibility Guidelines (WCAG) provide standards to ensure websites are accessible to people with disabilities. They specifically address:

- i. Text resizing (SC 1.4.4),
- iii. Text alternatives for non-text content (SC 1.1.1),
- iv. Keyboard accessibility (SC 2.1.1),
- v. Device independence, which includes not relying solely on mouse input.

Visually appealing design (ii) is not an accessibility requirement and is thus not a WCAG focus. The correct answer is D: i, iii, iv & v are true; ii is false.
