

NSE5_FNC_AD_7.6 Reliable Test Tutorial & NSE5_FNC_AD_7.6 Exam Collection

Cisco - 820-605 Authoritative Reliable Exam Tutorial

GET IT NOW! DOWNLOAD part of Exam: Cisco 820-605 Backup from Cloud Storage

Our 820-605 exam questions were a lot of advantages that you can't imagine. First of all, all content of our 820-605 study guide is accurate and a help to remember, so you need to spend a minimal time to practice all it. Second, our 820-605 training guide is effective, so you do not need to memorize the points of them easily because. Just practice with our 820-605 learning materials on a regular basis and everything will be fine.

According to the different demands from customers, the experts and professors designed three different versions for all customers. According to your need, you can choose the most suitable version of our Cisco Customer Success Manager guide current for yourself. The three different versions have different functions. If you don't do to buy our 820-605 Test Guide, the online workers of our company will introduce the different function to you. You will have a deep understanding of the three versions of our 820-605 exam questions. We believe that you will like our products.

Free PDF 820-605 - Cisco Customer Success Manager Authoritative Reliable Exam Tutorial

We update our Cisco 820-605 exam dumps over time and make the changes online. Based on the Cisco 820-605 exam change and help your preparation with Cisco 820-605 practice questions. We will provide you with the software which covered in the current test and provide you with the latest updates from Cisco 820-605 Exam Dumps. You will get a handful of knowledge about today's exam.

What's more, part of that DumpExam NSE5_FNC_AD_7.6 dumps now are free: https://drive.google.com/open?id=1EdiWaSkSEfUWtu8yP5xPIsgis_ZOHhuZ

All kinds of exams are changing with dynamic society because the requirements are changing all the time. To keep up with the newest regulations of the NSE5_FNC_AD_7.6 exam, our experts keep their eyes focusing on it. Our NSE5_FNC_AD_7.6 exam torrent are updating according to the precise of the real exam. Our NSE5_FNC_AD_7.6 Test Prep to help you to conquer all difficulties you may encounter. Once you choose our NSE5_FNC_AD_7.6 quiz torrent, we will send the new updates for one year long, which is new enough to deal with the exam for you and guide you through difficulties in your exam preparation.

If you are busing with your work or study, and have little time for preparation of your exam, our NSE5_FNC_AD_7.6 questions and answers will be your best choice. With experienced experts to compile and verify, NSE5_FNC_AD_7.6 exam dumps contain most of the knowledge points for the exam, and you just need to spend about 48 to 72 hours on study, you can pass the exam just one time. In addition, you can try free demo before buying NSE5_FNC_AD_7.6 Materials, so that you can have a better understanding of what you are going to buy. You can get downloading link and password within ten minutes after payment, so that you can start your learning right away.

NSE5_FNC_AD_7.6 Actual Lab Questions & NSE5_FNC_AD_7.6 Exam

Preparation & NSE5_FNC_AD_7.6 Study Guide

The sources and content of our NSE5_FNC_AD_7.6 practice materials are all based on the real exam. And they are the masterpieces of professional expertise these area with reasonable prices. Besides, they are high efficient for passing rate is between 98 to 100 percent, so they can help you save time and cut down additional time to focus on the NSE5_FNC_AD_7.6 Actual Exam review only. We understand your drive of the NSE5_FNC_AD_7.6 certificate, so you have a focus already and that is a good start.

Fortinet NSE 5 - FortiNAC-F 7.6 Administrator Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which two requirements must be met to set up an N+1 HA cluster? (Choose two.)

- A. A FortiNAC-F manager
- B. At least two FortiNAC-F devices designated as primary
- C. A dedicated VLAN for primary and secondary synchronization
- D. A FortiNAC-F device designated as a secondary

Answer: A,D

Explanation:

The N+1 High Availability (HA) architecture was introduced in FortiNAC-F version 7.6 to provide a more scalable and flexible redundancy model compared to the traditional 1+1 active/passive setup. In an N+1 configuration, a single secondary (standby) appliance can provide coverage for multiple primary (active) Control and Application (CA) appliances.

To set up an N+1 HA cluster, there are two fundamental structural requirements:

A FortiNAC-F Manager (FortiNAC-M): Unlike standard 1+1 HA, which can be configured directly between two CAs, N+1 management is centralized. The FortiNAC-M acts as the orchestrator that manages the failover groups, monitors the health of the primaries, and coordinates the promotion of the secondary server if a primary fails.

A FortiNAC-F device designated as a Secondary: The cluster must have one appliance explicitly configured with the Secondary failover role. This device remains in a standby state, receiving database replications from all N primaries in its group until it is called upon to take over the functions of a failed unit.

While a cluster can support multiple primaries (D), it does not strictly require "at least two" to function as an N+1 group; it simply requires N primaries (where $N \geq 1$). Additionally, N+1 is typically a Layer 3 managed solution via the Manager, meaning it does not mandate a "dedicated VLAN" for synchronization like some Layer 2 HA deployments.

"In FortiNAC-F 7.6, FortiNAC-M functions as a manager to manage the N+1 Failover Groups... enabling N+M high availability for CAs. To create an N+1 Failover group, you should add the secondary CA to the FortiNAC-M first, then add the primary CAs. The secondary CA is designed to take over the functionality of any single failed primary component." - FortiNAC-F 7.6.0 N+1 Failover Reference Manual.

NEW QUESTION # 16

When FortiNAC-F is managing VPN clients connecting through FortiGate, why must the clients run a FortiNAC-F agent?

- A. To transparently update The client IP address upon successful authentication
- B. To collect user authentication details
- C. To collect the client IP address and MAC address
- D. To validate the endpoint policy compliance

Answer: C

Explanation:

When FortiNAC-F manages VPN clients through a FortiGate, the agent plays a fundamental role in device identification that standard network protocols cannot provide on their own. In a standard VPN connection, the FortiGate establishes a Layer 3 tunnel and assigns a virtual IP address to the client. While the FortiGate sends a syslog message to FortiNAC-F containing the username and this assigned IP address, it typically does not provide the hardware (MAC) address of the remote endpoint's physical or virtual adapter.

FortiNAC-F relies on the MAC address as the primary unique identifier for all host records in its database. Without the MAC address, FortiNAC-F cannot correlate the incoming VPN session with an existing host record to apply specific policies or track the device's history. By running either a Persistent or Dissolvable Agent, the endpoint retrieves its own MAC address and communicates it directly to the FortiNAC-F service interface. This allows the "IP to MAC" mapping to occur. Once FortiNAC-F has both the IP

and the MAC, it can successfully identify the device, verify its status, and send the appropriate FSSO tags or group information back to the FortiGate to lift network restrictions.

Furthermore, while the agent can also perform compliance checks (Option D), the architectural requirement for the agent in a managed VPN environment is primarily driven by the need for session data correlation—specifically the collection of the IP and MAC address pairing.

"Session Data Components: * User ID (collected via RADIUS, syslog and API from the FortiGate). * Remote IP address for the remote user connection (collected via syslog and API from the FortiGate and from the FortiNAC agent). * Device IP and MAC address (collected via FortiNAC agent). ... The Agent is used to provide the MAC address of the connecting VPN user (IP to MAC)." - FortiNAC-F FortiGate VPN Integration Guide: How it Works Section.

NEW QUESTION # 17

An administrator wants to create a conference manager administrator account but would like to limit the number of conference accounts that can be generated to 30.

Which statement about conference accounts is true?

- A. Conference account limits are defined in the conference guest and contractor template.
- B. The conference account limit is defined in the onboarding conference portal.
- **C. The administrator can set a maximum of 30 conference accounts in the administrative profile for the conference manager.**
- D. In FortiNAC-F, conference accounts can be limited by multiples of 25, so the conference administrator could create 50 accounts.

Answer: C

Explanation:

In FortiNAC-F, the Conference Manager is a specialized administrative role designed for delegated administration, often used by receptionists or event organizers to create temporary guest accounts. To maintain security and prevent the over-provisioning of credentials, FortiNAC-F allows for granular restrictions on these accounts.

According to the FortiNAC-F Administration Guide regarding Administrative Profiles, when an administrator creates a profile for a Conference Manager, they can define specific "Account Limits." Under the profile settings (located in System > Settings > Admin Profiles), there is a field specifically for "Max Accounts." By entering "30" into this field, the administrator ensures that any user assigned to this profile cannot exceed 30 active conference accounts at any given time.

This setting is distinct from the Portal configuration or the Guest templates. While templates define the type of account (e.g., duration and access level), the Administrative Profile defines the capabilities and limitations of the person creating those accounts. This ensures that even if a guest template allows for unlimited registrations, the specific administrator is physically restricted by the system from generating more than the allotted 30.

"Administrative Profiles define what an administrator can see and do within the system. For delegated administration roles like the Conference Manager, the 'Max Accounts' field in the Administrative Profile is used to specify the maximum number of accounts the user is permitted to create. Once this limit is reached, the user will be unable to generate additional accounts until existing ones expire or are deleted." - FortiNAC-F Administration Guide: Administrative Profiles and Delegated Administration.

NEW QUESTION # 18

An administrator wants FortiNAC-F to return a group of user-defined RADIUS attributes in RADIUS responses.

Which condition must be true to achieve this?

- A. RADIUS accounting must be enabled on the FortiNAC-F RADIUS server configuration.
- B. The device models in the inventory view must be configured for proxy-based authentication.
- **C. Inbound RADIUS requests must contain the Calling-Station-ID attribute.**
- D. The requesting device must support RFC 5176.

Answer: C

Explanation:

In FortiNAC-F, the RADIUS Attribute Groups feature allows administrators to return customized RADIUS attributes (such as specific VLAN IDs, filter IDs, or vendor-specific attributes) in an Access-Accept packet sent back to a network device. This is particularly useful for supporting "Generic RADIUS" devices that are not natively supported but can be managed using standard AVPairs.

According to the FortiNAC-F Generic RADIUS Wired Cookbook and the RADIUS Attribute Groups section of the Administration Guide, there is one critical prerequisite for this feature to function: the inbound RADIUS request must contain the Calling-Station-ID attribute. The Calling-Station-ID typically contains the MAC address of the connecting endpoint. Because

FortiNAC-F is a host-centric system, it uses the MAC address as the unique identifier to look up the host record, evaluate the associated Network Access Policy, and determine which Logical Network (and thus which Attribute Group) should be applied. If the incoming request lacks this attribute, FortiNAC-F cannot reliably identify the host and, as a safety mechanism, will not include any user-defined RADIUS attributes in the response. This ensures that unauthorized or unidentifiable devices do not receive privileged access through misapplied attributes.

"Configure a set of attributes that must be included in the RADIUS Access-Accept packet returned by FortiNAC... Requirement: Inbound RADIUS request must contain Calling-Station-Id. Otherwise, FortiNAC will not include the RADIUS attributes. This attribute is used to identify the host and its current state within the FortiNAC database." - FortiNAC-F 7.6.0 Generic RADIUS Wired Cookbook: Configure RADIUS Attribute Groups.

NEW QUESTION # 19

A healthcare organization is integrating FortiNAC-F with its existing MDM. Communication is failing between the systems. What could be a probable cause?

- A. Security Fabric traffic is failing
- B. SSH communication is failing
- C. SOAP API communication is failing
- D. REST API communication is failing

Answer: D

Explanation:

The integration between FortiNAC-F and Mobile Device Management (MDM) platforms (such as Microsoft Intune, VMware Workspace ONE, or Jamf) is a critical component for providing visibility into mobile assets that do not connect directly to the managed infrastructure via standard wired or wireless protocols.

According to the FortiNAC-F MDM Integration Guide, the communication between the FortiNAC-F appliance and the MDM server is handled through REST API calls. FortiNAC-F acts as an API client, periodically polling the MDM server to retrieve device metadata, compliance status, and ownership information. If communication is failing, it is most likely because the API credentials (Client ID/Secret) are incorrect, the MDM's API endpoint is unreachable from the FortiNAC-F service port, or the SSL certificate presented by the MDM is not trusted by the FortiNAC-F root store.

While SSH (B) is used for switch CLI management and the Security Fabric (A) uses proprietary protocols for FortiGate synchronization, neither is the primary vehicle for MDM data exchange. SOAP API (D) is an older protocol that has been largely replaced by REST in modern FortiNAC integrations.

"FortiNAC integrates with MDM systems by utilizing REST API communication to query the MDM database for device information. To establish this link, administrators must configure the MDM Service Connector with the appropriate API URL and authentication credentials. If the 'Test Connection' fails, verify that the FortiNAC can reach the MDM provider via the REST API port (usually HTTPS 443)." - FortiNAC-F Administration Guide: MDM Integration and Troubleshooting

NEW QUESTION # 20

.....

You can also accelerate your career with the Fortinet NSE5_FNC_AD_7.6 certification if you study with our NSE5_FNC_AD_7.6 actual exam questions. We are certain that with these Fortinet NSE5_FNC_AD_7.6 real exam questions you will easily prepare and clear the Fortinet NSE5_FNC_AD_7.6 test in a short time. The only goal of DumpExam is to help you boost the Fortinet NSE5_FNC_AD_7.6 test preparation in a short time. To meet this objective, we offer updated and actual Fortinet NSE 5 - FortiNAC-F 7.6 Administrator Expert NSE5_FNC_AD_7.6 Exam Questions in three easy-to-use formats. These formats are Fortinet PDF Questions file, desktop Fortinet NSE5_FNC_AD_7.6 practice test software, and Fortinet NSE5_FNC_AD_7.6 web-based practice exam. All these three formats of our updated Fortinet NSE5_FNC_AD_7.6 exam product have valid, actual, updated, and error-free NSE5_FNC_AD_7.6 test questions. You can quickly get fully prepared for the test in a short time by using our NSE5_FNC_AD_7.6 pdf questions.

NSE5_FNC_AD_7.6 Exam Collection: https://www.dumpexam.com/NSE5_FNC_AD_7.6-valid-torrent.html

Please stop, and pay attention to our NSE5_FNC_AD_7.6 prep training. You will instantly get our free NSE5_FNC_AD_7.6 actual questions updates in case of any update in the examination content by the Fortinet Certification Exams, But once you get success in the NSE5_FNC_AD_7.6 Fortinet NSE 5 - FortiNAC-F 7.6 Administrator test you'll be eligible to avail all the personal and professional benefits associated with NSE5_FNC_AD_7.6 Fortinet NSE 5 - FortiNAC-F 7.6 Administrator certification, Just imagine that if you get the NSE5_FNC_AD_7.6 certification, then getting high salary and promotion will completely have no problem.
