

OGA-032 Exam Questions without being overloaded with unnecessary details

Passitcertify updated study material for OGA-032 Exam Questions: Secret to Success

Passitcertify offers study material for OGA-032 Exam Dumps in two formats,

- PDF: In PDF you will find actual exam questions for The Open Group OGA-032 exam. All the material is designed by experts and ensure your success. You will get exam related question to uproot them, which otherwise you will face. The PDF for Open Group ArchiMate OGA-032 exam can easily be downloaded and read. The study material for OGA-032 exam is conveniently portable.
- Practice Exam Software: Our Practice Exams' platform offers you a practical examination scenario for The Open Group OGA-032 Exam. It's an integrated platform which allows you to select questions, time slot and provides you an opportunity to gauge your own understanding about ArchiMate Accrediation.

<https://www.passitcertify.com/the-open-group/oqa-032-questions.html>

Passitcertify

The OGA-032 guide dump from our company is compiled by a lot of excellent experts and professors in the field. In order to help all customers pass the exam in a short time, these excellent experts and professors tried their best to design the study version, which is very convenient for a lot of people who are preparing for the OGA-032 exam. You can find all the study materials about the exam by the study version from our company. More importantly, we can assure you that if you use our OGA-032 Certification guide, you will never miss any important and newest information. We will send you an email about the important study information every day in order to help you study well. We believe that our OGA-032 exam files will be most convenient for all people who want to take an exam.

The ArchiMate 3 Part 2 Exam is a challenging certification that requires candidates to demonstrate their knowledge and expertise in the ArchiMate modeling language. By passing OGA-032 exam, candidates can demonstrate to potential employers that they have the skills and experience needed to design and manage complex IT architectures, and that they are committed to ongoing professional development in this field.

The ArchiMate 3 Part 2 certification is internationally recognized and is highly valued in the industry. It demonstrates the candidate's proficiency in using the ArchiMate 3 modeling language to design and manage complex systems. ArchiMate 3 Part 2 Exam certification is also a valuable asset for professionals who are looking to enhance their career prospects and improve their earning potential.

The Open Group OGA-032 (ArchiMate 3 Part 2) Certification Exam is an essential certification for professionals who want to enhance their knowledge and skills in enterprise architecture modeling and analysis using ArchiMate 3 language. ArchiMate 3 Part 2 Exam certification offers a competitive edge to individuals looking to advance their careers in enterprise architecture and IT. ArchiMate 3 Part 2 Exam certification program is recognized globally by organizations and employers, making it a valuable asset for professionals looking to stand out in the job market.

>> Practice OGA-032 Test Online <<

How to Get Success in The Open Group OGA-032 Exam With Flying Colors?

Preparing for ArchiMate 3 Part 2 Exam (OGA-032) exam can be a challenging task, especially when you're already juggling multiple responsibilities. People who don't study with updated The Open Group OGA-032 practice questions fail the test and lose their resources. If you don't want to end up in this unfortunate situation, you must prepare with actual and Updated OGA-032 Dumps of Exam-Killer. At Exam-Killer, we believe that one size does not fit all when it comes to The Open Group OGA-032 exam preparation. Our team of experts has years of experience in providing The Open Group OGA-032 exam preparation materials that help you reach your full potential.

The Open Group ArchiMate 3 Part 2 Exam Sample Questions (Q17-Q22):

NEW QUESTION # 17

Please read this scenario prior to answering the question

The ArchiSurance Mobile consumer solution is used for selling and renewing insurance products, providing customer service, enabling accurate and convenient home recordkeeping, and capturing and processing claims. The solution consists of three applications. The Consultant application lets customers review their existing coverage, and update it based on common life events, such as getting a new car, moving into a new home, or having a family member move in or out. If necessary, they can speak or chat with a customer service representative. The Home Manager application helps customers photograph and catalogue their valuable possessions in order to support the filing of accurate claims in case of loss or damage. The Claim Manager application enables customers to quickly file a claim for loss or damage to an insured auto, home or possession. It enables customers to describe the incident by referencing information captured with the Consultant and the Home Manager applications. In addition, it allows the customer to add photographs, audio, video and text to support a claim, submit the claim, and monitor its progress.

The ArchiSurance Mobile applications rely on a number of application services hosted by ArchiSurance. The first is an Auto Identification and Description (AID) service that the Consultant application uses to validate and complete auto information entered by customers. The second service, Home Identification and Description (HID) performs the same function for home information, and is used by the Home Manager application. The Consultant application also uses the Virtual Agent service to guide customers as they select coverage options, the Payment Processor service to arrange premium payments, and the Coverage Activator service to generate policies and put them in force.

ArchiSurance Mobile also relies on a number of technology services. The Home Manager application uses a Multimedia Repository service to store and retrieve information about insured homes. The Claim Manager application also uses this service for claim information entered by customers. All three ArchiSurance Mobile applications use a Personal Security service to register and authenticate customers, and to manage their profiles.

Each application service is realized by an application component with the same name. Each technology service is realized by a system software environment, having the same name.

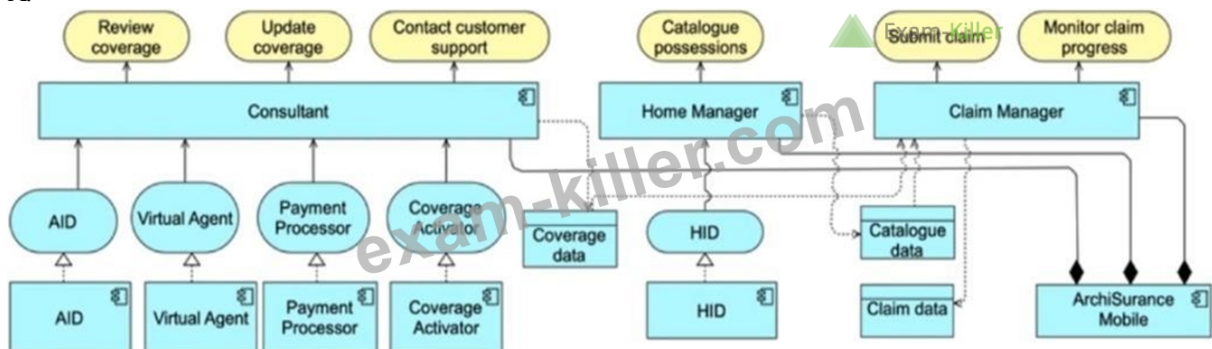

ArchiSurance hosts both the application components and system software environments in a virtualized server pool within its data center. Each service has its own virtual server. Each virtual server is connected to a data center network (DCN) which in turn connects to a commercial wide area network (WAN).

Refer to the Scenario

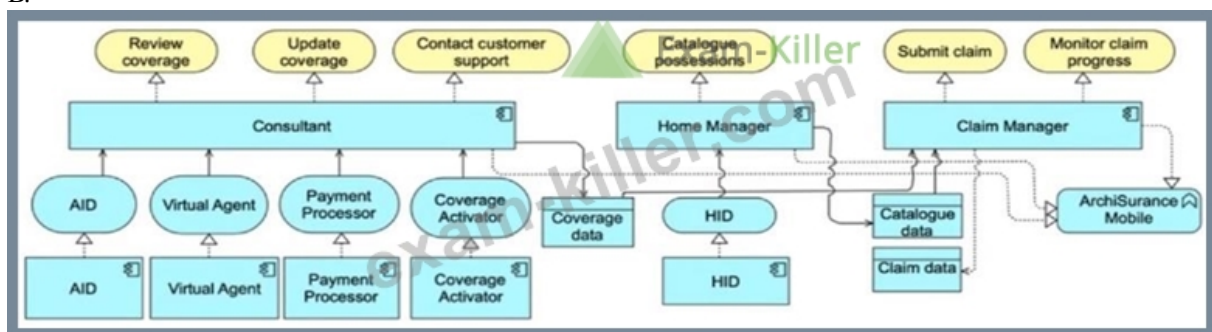

You have been asked to show the business services that ArchiSurance Mobile delivers, and the application services and components that are used to deliver those business services. This should also show the data accessed directly by the interactive application components.

Which of the following answers provides the best explanation?

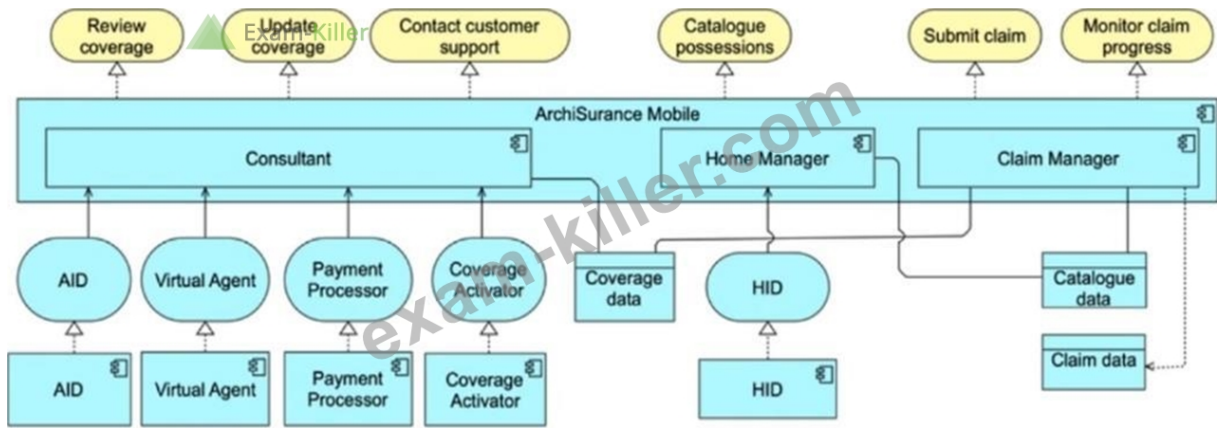

- A.

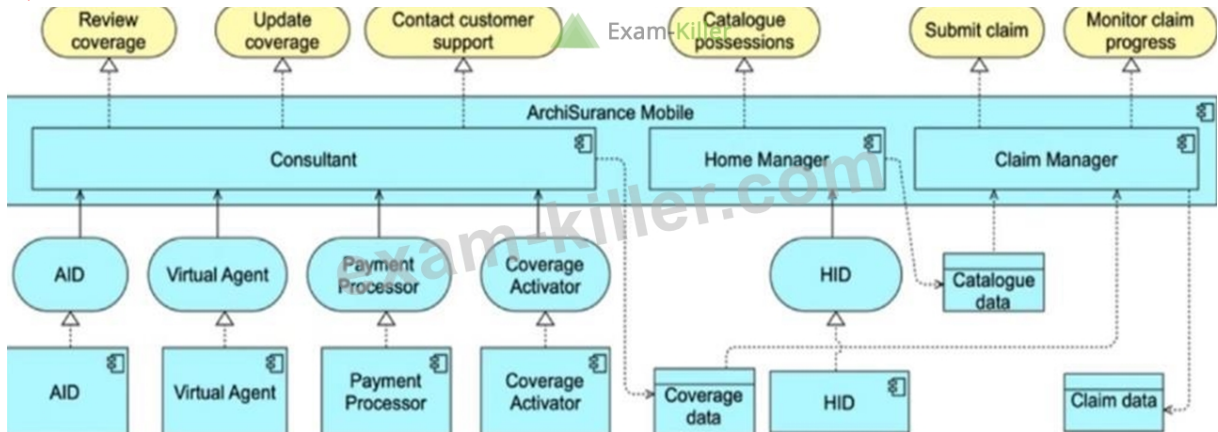

- B.

- C.

• D.

Answer: D

Explanation:

The chosen option is the best fit for the requirements described in the scenario:

It shows the business services (yellow rounded rectangles) at the top, representing the interactions that ArchiSurance Mobile delivers to customers (e.g., "Review coverage", "Update coverage", "Submit claim", etc.).

It displays the application components (light blue rectangles, e.g., "Consultant", "Home Manager", "Claim Manager") that deliver the business services. Each business service is linked directly to the appropriate application component.

It includes the application services (blue ovals, e.g., "AID", "Virtual Agent", "Payment Processor", "Coverage Activator", "HID") and shows how the application components use these services.

It accurately reflects the data accessed directly by the interactive application components (rectangles with a document symbol), directly associating each with the correct application component.

The layering and relationships clearly show how the business services are realized via application components and services, matching the scenario's requirements for traceability and clarity.

NEW QUESTION # 18

Please read this scenario prior to answering the question

ArchiAir Catering Services (ACS) manages the catering services for ArchiAir, a leading airline.

ACS is the sole catering supplier for all ArchiAir flights, and its services include full provisioning to the aircraft.

Currently, ACS operates three central production facilities, supported by distribution hubs and local pre-flight production facilities.

The central production facilities are responsible for producing standardized non-food materials (such as plates, cutlery, and boxes), non-perishable food products, and key ingredients required by the local production facilities. These materials are subsequently distributed to the distribution hubs, which also serve as warehouses for the local production facilities. Within the local production facilities, multiple production machines are utilized, each featuring dedicated workstations for chefs and quality inspectors. Most of the local production facilities employ fully automated assembly lines, including built-in packaging stations.

The loaded service trolleys are then transported to the aircraft using small lorries.

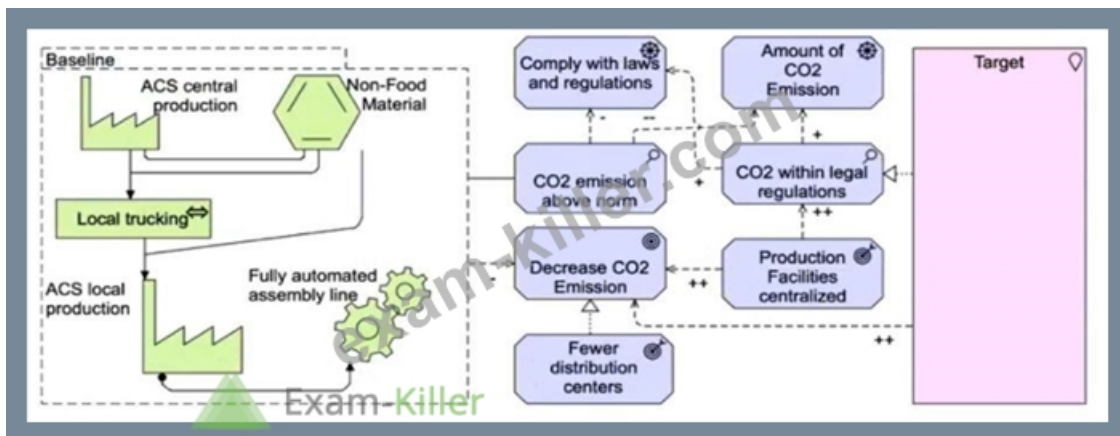

In response to investor pressure for ArchiAir to reduce its carbon footprint, the CEO of ACS has announced a plan to address this environmental concern. Subsequently, the Ministry of Social Welfare and Health has enacted a law mandating a reduction in CO2 emissions from all production facilities by the end of the year. Additionally, the airline's decision to raise ticket prices due to escalating fuel costs has led to a decrease in passenger numbers. This, in turn, impacts the volume of non-food materials required

from ACS. An internal investigation has produced a report highlighting the potential benefits of centralizing production facilities and reducing the number of distribution centers. Such changes would result in lower CO2 emissions while still effectively meeting all the requirements of ArchiAir.

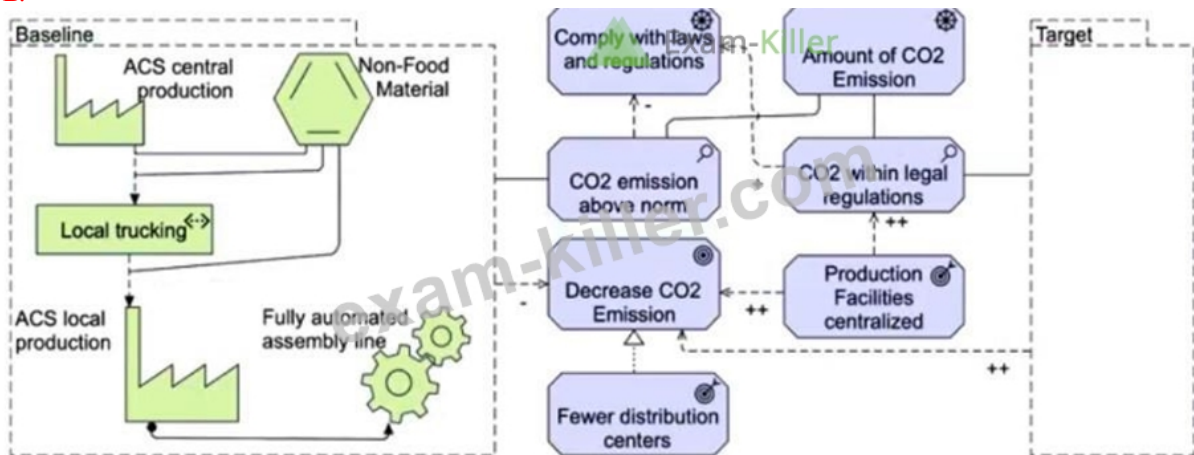

In addition to evaluating its supply chain to reduce its carbon footprint, ArchiAir is taking proactive steps to achieve a net zero carbon footprint for its IT operations. The Chief Information Officer (CIO) has identified two crucial requirements to support this endeavor. The first requirement involves switching to renewable energy for ACS facilities, which are often located in remote areas where traditional fuels are the primary source of energy. To align with sustainability goals, ArchiAir aims to transition these facilities to renewable energy sources. By utilizing renewable energy, ArchiAir can significantly reduce its reliance on traditional fuels and contribute to a greener operation. The second requirement pertains to the scalability of ArchiAir's IT operations, taking into account the airline's susceptibility to seasonal changes in demand. The CIO has observed notable disparities between sites that have additional blade servers and can scale their capacity, and sites that solely rely on the two mainframes housed in central facilities. A comprehensive report has revealed that the blade servers have a negligible impact on resource waste, whereas the mainframes are notorious for their power inefficiency, particularly during periods of low demand.

Refer to the Scenario

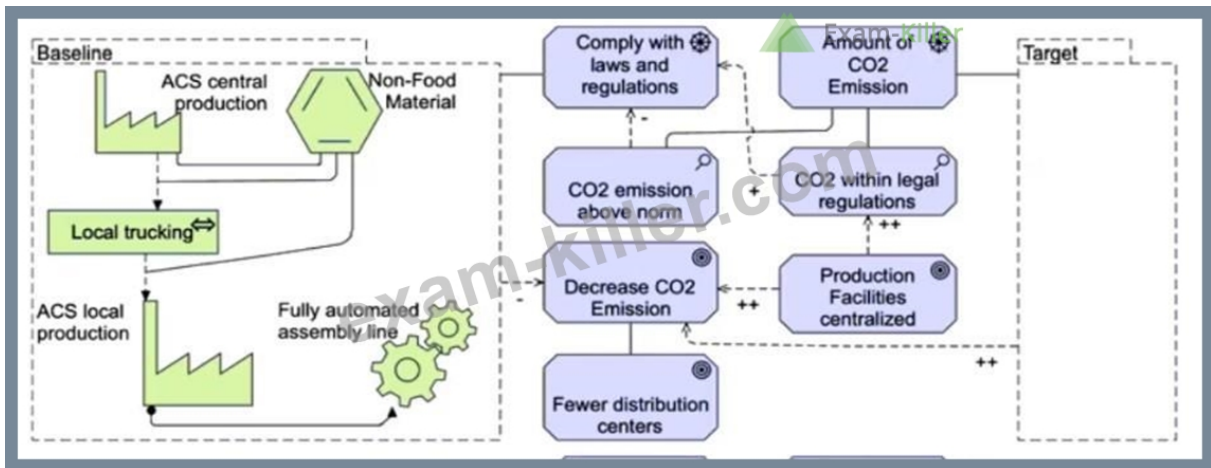

Which of the following answers best describes the proposed transition from baseline to target, including details of motivation for changes? Note that there is no need to show the details of the target state.

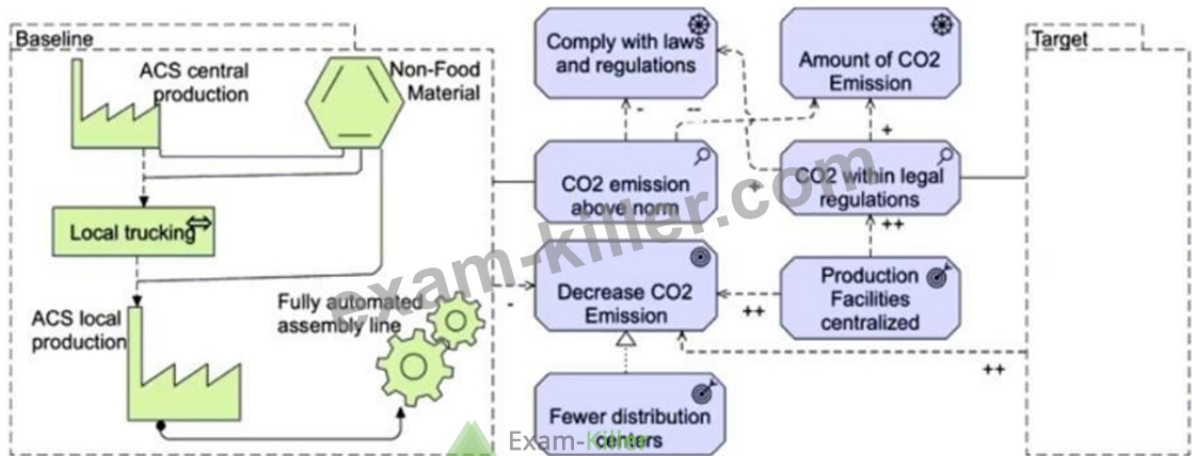

- A.
- B.

- C.

• D.

Answer: B

Explanation:

This model clearly shows the "baseline → motivations → target" plateau map with all of the Motivation elements correctly typed and the single, blank target plateau on the right. It has:

- A dashed-box Plateau on the left containing "ACS central production," "Non-Food Material,"

"Local trucking," "ACS local production" and "Fully automated assembly line."

- All of the Motivation elements in the middle (Driver "Comply with laws and regulations," Assessment "CO2 emission above norm," Requirement "CO2 within legal regulations," Goal

"Decrease CO2 emission," Plateau "Production facilities centralized," Requirement "Fewer distribution centers," plus the Goal "Amount of CO2 emission").

- The correct ArchiMate badges (gear for Driver, magnifier for Assessment, key-bullet for Requirements, target for Goals, scribble for Plateau) and the right influence/composition flows.

- A dashed-box Plateau on the right labelled "Target," left empty per the brief.

NEW QUESTION # 19

Please read this scenario prior to answering the question

The ArchiSurance Mobile consumer solution is used for selling and renewing insurance products, providing customer service, enabling accurate and convenient home recordkeeping, and capturing and processing claims. The solution consists of three applications. The Consultant application lets customers review their existing coverage, and update it based on common life events, such as getting a new car, moving into a new home, or having a family member move in or out. If necessary, they can speak or chat with a customer service representative. The Home Manager application helps customers photograph and catalogue their valuable possessions in order to support the filing of accurate claims in case of loss or damage. The Claim Manager application enables customers to quickly file a claim for loss or damage to an insured auto, home or possession. It enables customers to describe the incident by referencing information captured with the Consultant and the Home Manager applications. In addition, it allows the customer to add photographs, audio, video and text to support a claim, submit the claim, and monitor its progress.

The ArchiSurance Mobile applications rely on a number of application services hosted by ArchiSurance. The first is an Auto Identification and Description (AID) service that the Consultant application uses to validate and complete auto information entered

by customers. The second service, Home Identification and Description (HID) performs the same function for home information, and is used by the Home Manager application. The Consultant application also uses the Virtual Agent service to guide customers as they select coverage options, the Payment Processor service to arrange premium payments, and the Coverage Activator service to generate policies and put them in force.

ArchiSurance Mobile also relies on a number of technology services. The Home Manager application uses a Multimedia Repository service to store and retrieve information about insured homes. The Claim Manager application also uses this service for claim information entered by customers. All three ArchiSurance Mobile applications use a Personal Security service to register and authenticate customers, and to manage their profiles.

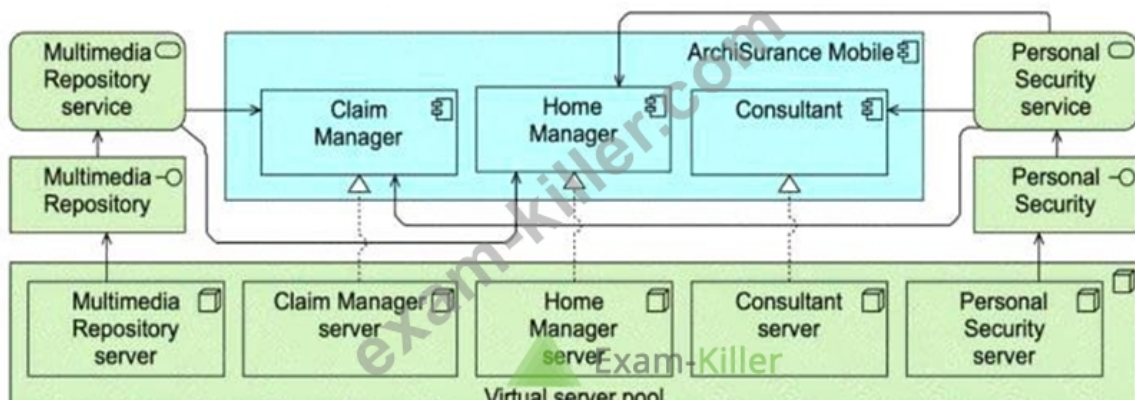

Each application service is realized by an application component with the same name. Each technology service is realized by a system software environment, having the same name. ArchiSurance hosts both the application components and system software environments in a virtualized server pool within its data center. Each service has its own virtual server. Each virtual server is connected to a data center network (DCN) which in turn connects to a commercial wide area network (WAN).

Refer to the Scenario

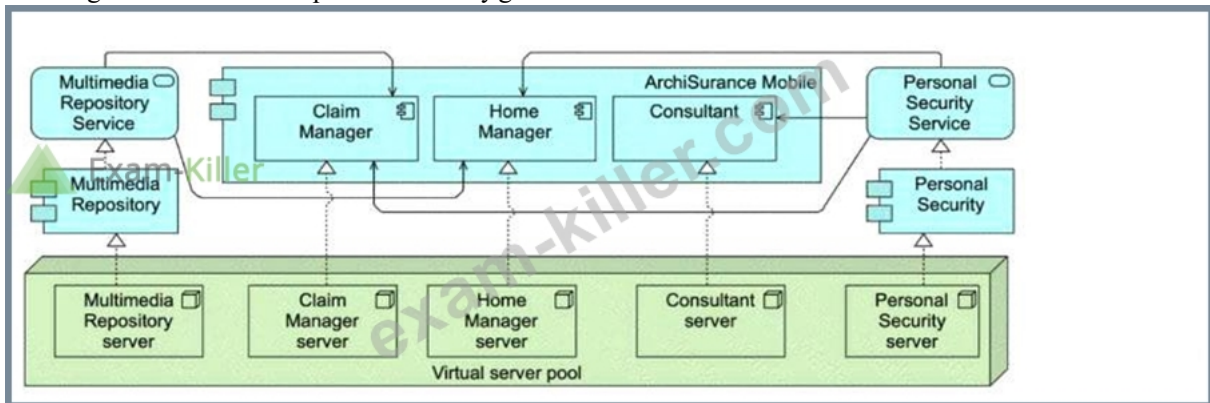

You have been asked to show the applications that make up the ArchiSurance Mobile solution and the technology that supports these applications.

Which of the following answers provides the best description? Note that it is not necessary to model the networks.

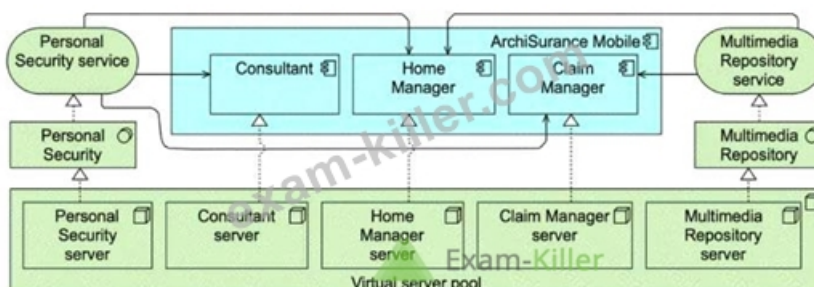

- A. A diagram of a computer server Description automatically generated

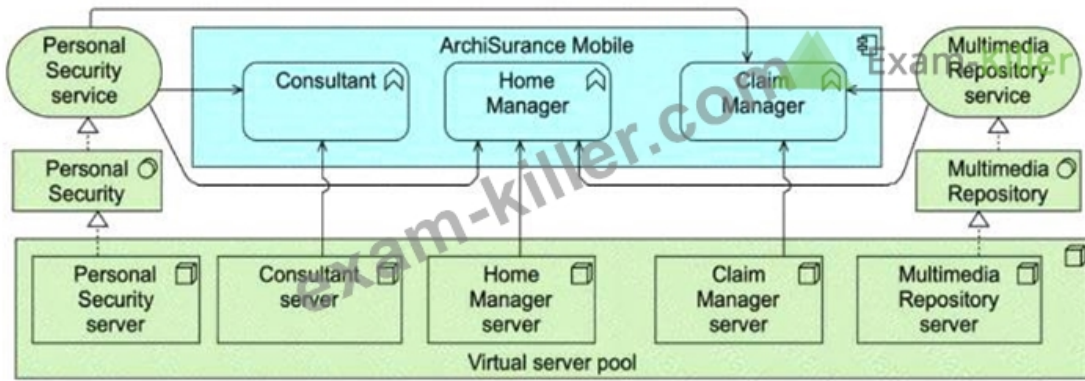

- B. A diagram of a server Description automatically generated

- C. A diagram of a server Description automatically generated

- D. A diagram of a server Description automatically generated

Answer: A

Explanation:

In this scenario, the focus is on modeling the ArchiSurance Mobile solution, showing the applications that make up this solution and the technology infrastructure that supports them. This includes applications, application services, and the system software environments (technology services) upon which the applications rely.

Key ArchiMate® 3.2 Concepts Applied:

* Application Components and Services:

* Consultant Application: This allows customers to review, update coverage, and speak with customer service representatives. It uses the following application services:

* Auto Identification and Description (AID) for validating auto information.

* Virtual Agent for helping customers select options.

* Payment Processor to arrange payments.

* Coverage Activator to generate and activate policies.

* Home Manager Application: This allows customers to catalogue possessions and use the Home Identification and Description (HID) service to validate home information.

* Claim Manager Application: Enables filing of claims, referencing data from the Consultant and Home Manager applications and storing information (such as photos, videos) via the Multimedia Repository.

* Technology Services:

* Personal Security Service: Used for customer registration, authentication, and profile management across all three applications.

* Multimedia Repository Service: Used to store and retrieve information related to home possessions and claim details, supporting both the Home Manager and Claim Manager applications.

* Technology Infrastructure:

* Each application component (Consultant, Home Manager, Claim Manager) is hosted on its own virtual server within a virtualized server pool.

* Each technology service is realized by a corresponding system software environment (e.g., Multimedia Repository, Personal Security), each with its own virtual server.

* The infrastructure is hosted in a data center, but the focus here is on the services rather than the network connections.

Why Option C is Correct:

* Option C accurately represents the key applications (Consultant, Home Manager, Claim Manager) in connection with the appropriate technology services and their respective virtual servers.

* The model shows the relationships between the applications and their dependencies on Personal Security and Multimedia Repository, aligning with the description provided.

* The virtual server pools are depicted clearly, showing how the applications and services are realized within this infrastructure.

* The relationships between applications and application services (AID, HID, Virtual Agent, Payment Processor, Coverage Activator) are not modeled in full detail here, but they are implicitly understood through the applications.

Why Other Options Are Incorrect:

* Option A and Option D both incorrectly depict some relationships between the applications and their supporting technology services or servers, or miss certain dependencies.

* Option B does not provide as clear a depiction of the virtualized infrastructure and how the applications relate to the Multimedia Repository and Personal Security services.

Conclusion:

Option C provides the most accurate and complete description of the ArchiSurance Mobile solution and the supporting technology, as required by the scenario. It correctly illustrates the relationships between the applications, the virtual servers, and the supporting technology services according to ArchiMate® 3.2 principles.

NEW QUESTION # 20

Please read this scenario prior to answering the question

The IT Operations (IT Ops) department at ArchiSurance has five core responsibilities, each encompassing a dedicated business process: (1) Batch Operations (Batch Ops), (2) Online Operations (Online Ops), (3) Security Operations (Security Ops), (4) User Support and (5) Continuous Improvement. Service level agreements (SLAs) are in place for Batch Ops and Online Ops, and each Ops process generates monitoring data that is utilized by the Continuous Improvement process.

The System Ops category consists of Batch Ops, Online Ops, and Security Ops, each having an incident management sub-process. These sub-processes are triggered by Batch, Online, and Security Incidents, respectively. In the initial stages of the incident management sub-processes, an Incident Alert is shared with the other System Ops processes by posting it to the Alert Buffer.

Batch Ops relies on a schedule that outlines all batch jobs and their dependencies. This schedule serves two sub-processes: Batch Planning, which updates the schedule for use by the Execution Management sub-process.

The Batch Ops process relies on a suite of interconnected applications to facilitate its operations. Among these applications, the Batch Scheduler plays a vital role by allowing users to manage a comprehensive database of jobs, job schedules, and dependencies. It effectively launches batch jobs according to the information stored in the database.

Working in conjunction with the Batch Scheduler, the Batch Monitor application utilizes the job schedules as a reference point to monitor job execution. It identifies any exceptional conditions that may arise during the execution process. To ensure effective handling of these exceptions, the Batch Monitor communicates the information to both the Batch Scheduler and the Incident Handler applications through the previously mentioned Alert Buffer.

The Incident Handler application operates based on a defined set of business rules. It uses these rules to determine the relevant systems and individuals that need to be notified in the event of each incident.

Subsequently, the Incident Handler application generates appropriate notifications according to these determinations.

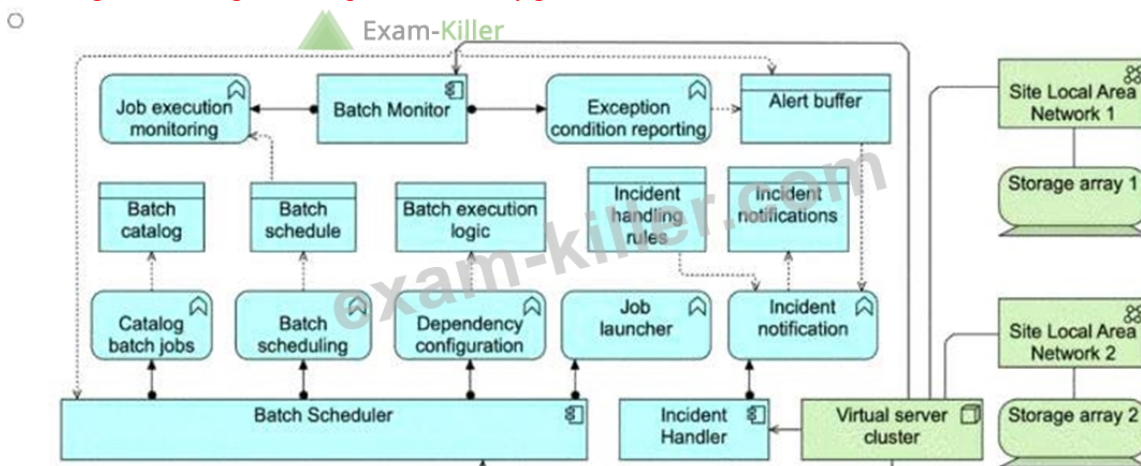

Recognizing the criticality of the Batch Scheduler, Batch Monitor, and Incident Handler applications, ArchiSurance has implemented redundant hosting arrangements across multiple geographically distributed data centers. In each data center, these three applications are supported by fully redundant virtual server clusters. Each cluster is connected to two site local area networks, both of which are further linked to separate storage array hardware devices.

Refer to the scenario

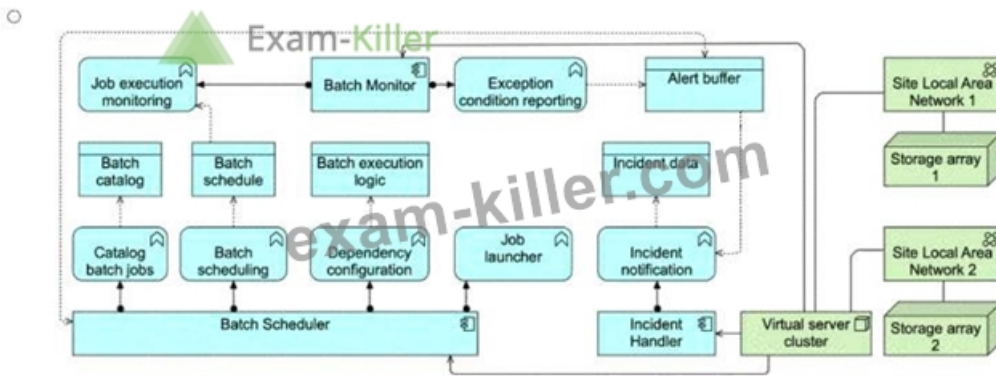

As part of an IT service management initiative, you have been assigned the task to show how applications and technology support the Batch Ops process. This should show the relationships between the applications, their functions, the data they access, and the technology that hosts the applications and data, along with the networks that connect the servers. It is only necessary to model a single data center.

Which of the following answers provides the most complete and accurate model?

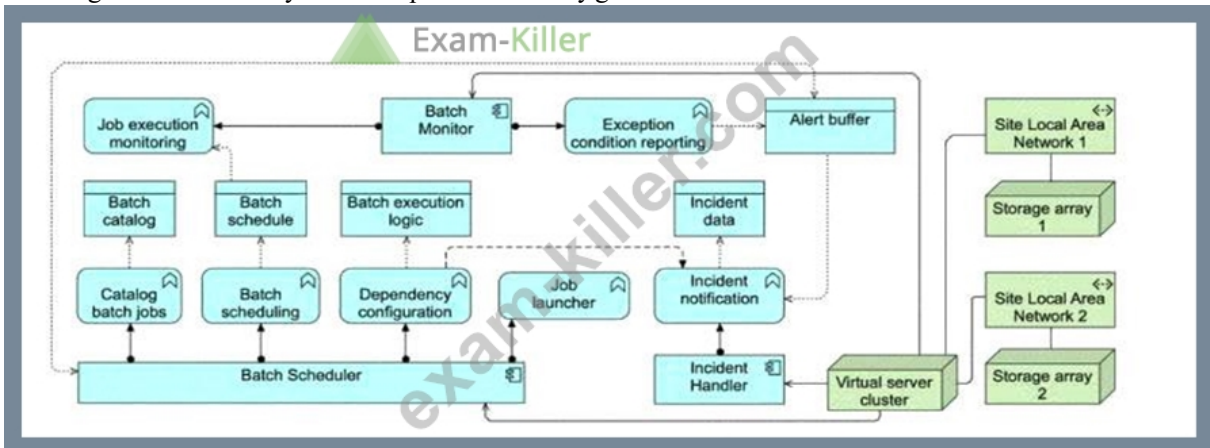

- A. A diagram of a firefighter Description automatically generated

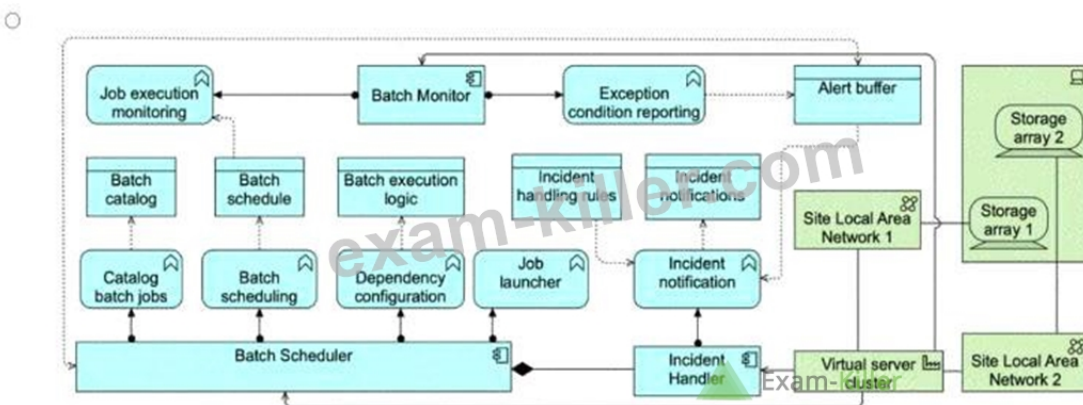

- B. A diagram of a work flow Description automatically generated

- C. A diagram of a software system Description automatically generated with medium confidence

- D. A diagram of a work flow Description automatically generated

Answer: A

Explanation:

The correct answer is C as it provides the most complete and accurate model according to the ArchiMate® 3 framework and the given scenario.

Here's why:

* Business Processes and Sub-Processes:

* Batch Operations (Batch Ops) is one of the core responsibilities in IT Operations, and its processes are modeled clearly. The Batch Scheduler is responsible for managing batch jobs, schedules, and dependencies.

* The Batch Monitor is correctly shown to monitor the job execution and notify exceptions using the Alert Buffer.

* The Incident Handler is used to notify relevant systems and individuals, triggered by the incident detection from Batch Monitor. This is modeled by the use of incident handling rules and notifications.

* Application Layer (Application Components and Functions):

* The Batch Scheduler, Batch Monitor, and Incident Handler are accurately depicted as the main applications. These applications are crucial for managing job scheduling, monitoring execution, and handling incidents.

* These applications share the same virtual server cluster, which is an important detail reflecting redundancy and high availability, which was mentioned in the scenario.

* The interrelationships between applications are accurately depicted: the Batch Scheduler launches jobs, the Batch Monitor checks

their status, and Incident Handler deals with exceptions.

* Data Access:

* The Batch Scheduler accesses and updates batch jobs and schedules, and this is represented clearly.

* The Incident data and Incident notifications are accurately modeled as being used by Incident Handler.

* Technology Layer:

* The Virtual server cluster, Storage arrays, and Site Local Area Networks are appropriately connected to support the application infrastructure.

* Redundancy is shown through the use of multiple storage arrays and network connections, as described in the scenario.

* Accuracy in Relationship Types (ArchiMate® 3) References:

* The relationships between components are modeled using ArchiMate® 3 standards, such as flow relationships between the Batch Monitor and Alert Buffer or between the Incident Handler and storage components.

* Triggering relationships exist between the applications that manage batch jobs and the monitoring/notification process, ensuring correct job execution and incident handling.

Conclusion: Answer C is the most complete model, as it accurately reflects the roles of the various applications, their interactions, and the underlying technology components in support of the Batch Ops process, following the guidelines and modeling standards of ArchiMate® 3.

NEW QUESTION # 21

Please read this scenario prior to answering the question

The ArchiSurance enterprise document management solution plays a crucial role in supporting a large number of document types and managing a high volume of document-based transactions each day. Given its business-critical nature, the document management solution is hosted redundantly across two geographically separate data center sites: Site A and Site B. Both sites are configured identically to ensure seamless operations.

Each site has a highly available data center network (DCN) that connects to the resilient ArchiSurance wide area network (WAN).

Each claim management server is connected to its respective site's DCN, forming a converged network that interconnects servers and storage arrays. A dedicated physical storage array is allocated to the claim management application within each DCN.

Additionally, each site houses four powerful physical servers exclusively dedicated to the claim management application.

Among these servers, one remains on standby at any given time, while the other three take on specific roles in hosting the document, workflow, and application engines.

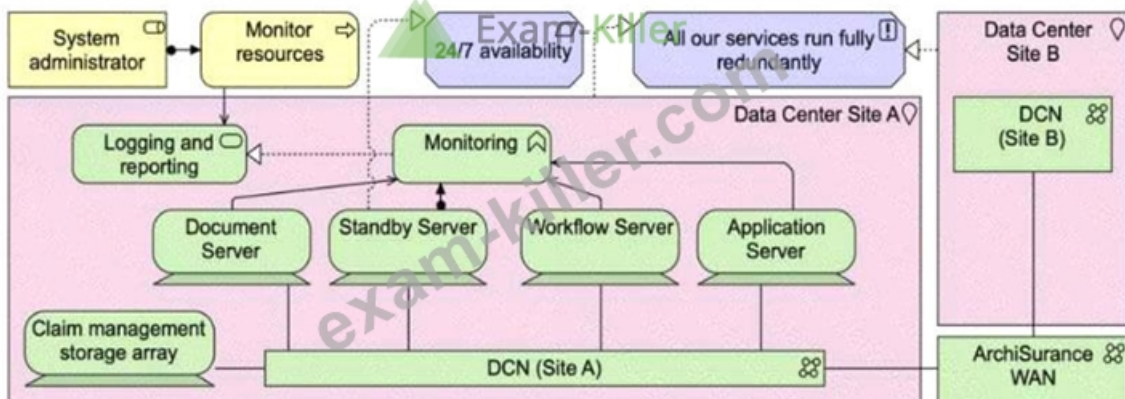

The standby server is responsible for monitoring the behavior of the other servers, providing a logging and reporting service. The active servers regularly transmit data to facilitate this monitoring functionality. In the event of a server failure, the standby server steps in to perform resource reallocation, replacing the faulty server. However, this task requires manual intervention from a system administrator to reconfigure the logging and reporting service to adapt to the new environment.

Refer to the Scenario

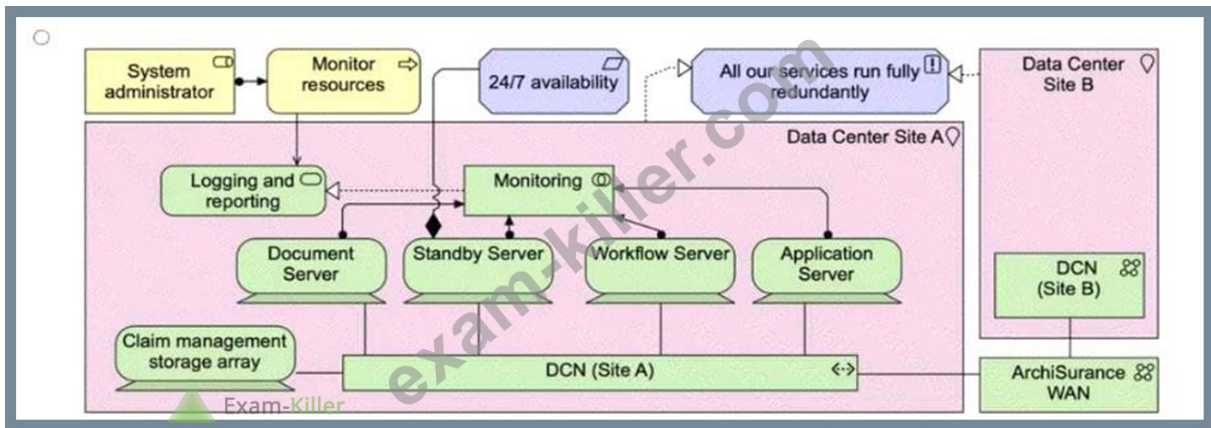

The IT manager has asked you to model the hardware and networks that support the document management solution. This includes capturing the infrastructure components such as data center sites, servers, storage, and networks. Additionally, you are expected to outline the necessary functionality and services required to enable failover within a server cluster. Given that both data centers share an identical configuration, it is sufficient for Site B to only show the associated networking.

Which of the following is the best answer?

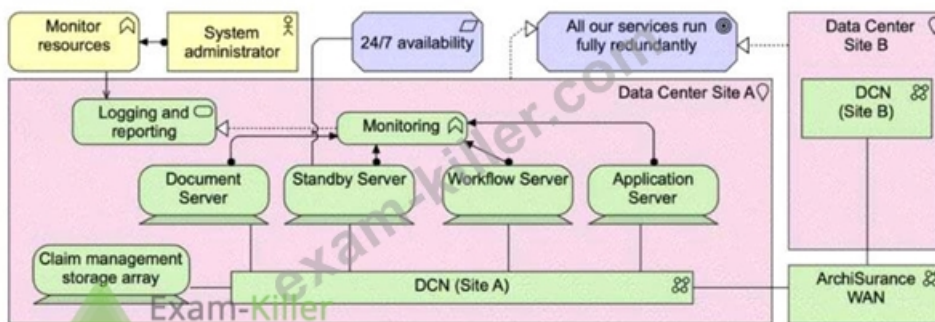

- A. A diagram of a software server AI-generated content may be incorrect.

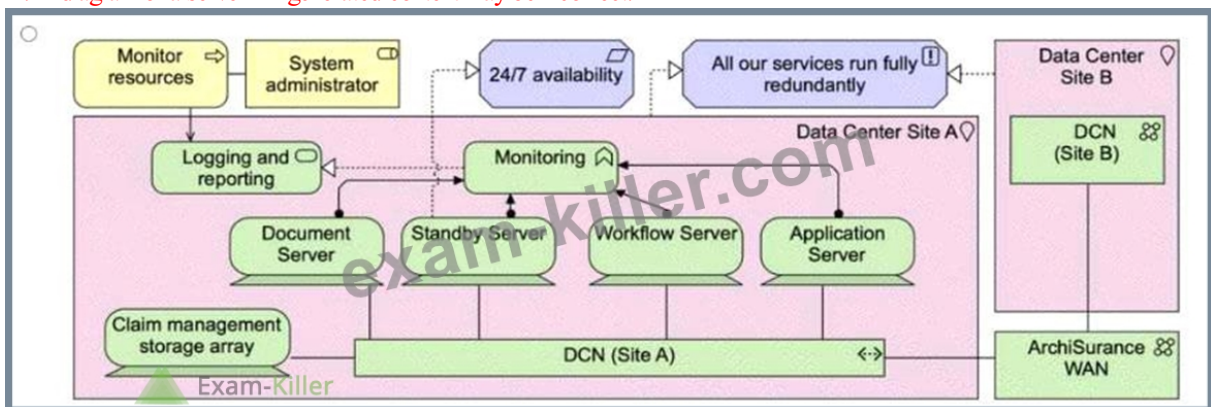

- B. A diagram of a server AI-generated content may be incorrect.

- C. A diagram of a server AI-generated content may be incorrect.

- D. A diagram of a server AI-generated content may be incorrect.

Answer: D

Explanation:

We need to identify the most accurate and complete model that represents:

- * Infrastructure Components- Including data centers, servers, storage arrays, and networks.
- * Failover Capabilities- Showing the standby server's role in monitoring and switching functionality upon failure.
- * Redundant Setup- Ensuring the representation of both data centers (Site A and Site B), with Site B showing only networking.
- * Interconnectivity- Between servers, DCN, and WAN.

Why D is the Best Choice:

#All required infrastructure components are included, such as:

- * Physical servers (Document, Workflow, and Application Servers).
- * Standby Server for failover.
- * Claim Management Storage Array.
- * DCN (Data Center Network) for Site A and Site B.
- * ArchiSurance WAN for external connectivity.

#The Standby Server is correctly linked to logging, monitoring, and reporting, showing its role in monitoring and failover.

#Networking is modeled properly:

- * Both Site A and Site B have a DCN, correctly interconnecting storage and servers.
- * Site B does not duplicate servers but represents networking, as per the scenario.

#Functionality of Failover is Modeled Accurately:

- * Monitoring and reporting services are depicted.
 - * Manual intervention by a system administrator is present.
- Why Not A, B, or C?
- * A: Does not fully capture the network and storage relationships clearly.
 - * B: Similar to A but misses some essential network connections.
 - * C: Incorrect failover representation, and networking elements are not clearly depicted.

NEW QUESTION # 22

.....

Our OGA-032 training prep was produced by many experts, and the content was very rich. At the same time, the experts constantly updated the contents of the study materials according to the changes in the society. The content of our OGA-032 study guide is definitely the most abundant. Before you go to the exam, our OGA-032 Exam Questions can provide you with the simulating exam environment. This not only includes the examination process, but more importantly, the specific content of the exam. In previous years' examinations, the hit rate of OGA-032 learning quiz was far ahead in the industry.
