

High Hit Rate Databricks-Certified-Data-Engineer-Associate Latest Practice Materials—Find Shortcut to Pass Databricks-Certified-Data-Engineer-Associate Exam

What's more, part of that VCE4Dumps Databricks-Certified-Data-Engineer-Associate dumps now are free:
https://drive.google.com/open?id=16HaCjceK7ef_Dyb0enOBK_BDwk_hr0eX

Our Databricks-Certified-Data-Engineer-Associate guide torrent specially proposed different versions to allow you to learn not only on paper, but also to use mobile phones to learn. This greatly improves the students' availability of fragmented time. You can choose the version of Databricks-Certified-Data-Engineer-Associate learning materials according to your interests and habits. And if you buy the value pack, you have all of the three versions, the price is quite preferential and you can enjoy all of the study experiences. This means you can study Databricks-Certified-Data-Engineer-Associate Exam Engine anytime and anyplace for the convenience to help you pass the Databricks-Certified-Data-Engineer-Associate exam.

To become certified as a Databricks data engineer associate, individuals must pass a rigorous certification exam that tests their knowledge and understanding of Databricks technologies and their ability to apply them in practical situations. Databricks-Certified-Data-Engineer-Associate exam is designed to be challenging and requires individuals to have a deep understanding of data engineering concepts and technologies. However, individuals who successfully pass the exam can enjoy the benefits of becoming a certified Databricks data engineer associate and take their careers to the next level in the field of data engineering.

The Databricks Databricks-Certified-Data-Engineer-Associate Exam covers a range of topics, including data ingestion, processing, and storage. Candidates are tested on their ability to design and implement data pipelines, data models, and data processing workflows using Databricks. Databricks is a cloud-based data platform that provides a unified analytics platform for data engineering, data science, and machine learning.

Pass Guaranteed Quiz Databricks-Certified-Data-Engineer-Associate - Databricks Certified Data Engineer Associate Exam –Reliable Latest Practice Materials

It is very necessary for a lot of people to attach high importance to the Databricks-Certified-Data-Engineer-Associate exam. It is also known to us that passing the exam is not an easy thing for many people, so a good study method is very important for a lot of people, in addition, a suitable study tool is equally important, because the good and suitable Databricks-Certified-Data-Engineer-Associate reference guide can help people pass the exam in a relaxed state. We are glad to introduce the Databricks-Certified-Data-Engineer-Associate certification study guide materials from our company to you. We believe our Databricks-Certified-Data-Engineer-Associate study materials will be very useful and helpful for you to pass the Databricks-Certified-Data-Engineer-Associate exam.

The Databricks Certified Data Engineer Associate Exam certification exam consists of 60 multiple-choice questions that must be answered within 90 minutes. Databricks-Certified-Data-Engineer-Associate Exam is available in English and can be taken online, making it accessible to candidates worldwide. The passing score for the exam is 70%, and candidates who pass the exam receive a

certificate that demonstrates their proficiency in data engineering using Databricks.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q72-Q77):

NEW QUESTION # 72

A data engineer needs to create a table in Databricks using data from their organization's existing SQLite database.

They run the following command:

Which of the following lines of code fills in the above blank to successfully complete the task?

- A. `org.apache.spark.sql.jdbc`
- B. `org.apache.spark.sql.sqlite`
- C. `sqlite`
- D. `autoloader`
- E. `DELTA`

Answer: C

Explanation:

In the given command, a data engineer is trying to create a table in Databricks using data from an SQLite database. The correct option to fill in the blank is "sqlite" because it specifies the type of database being connected to in a JDBC connection string. The USING clause should be followed by the format of the data, and since we are connecting to an SQLite database, "sqlite" would be appropriate here. References:

- * Create a table using JDBC
- * JDBC connection string
- * SQLite JDBC driver

NEW QUESTION # 73

A data engineer is attempting to drop a Spark SQL table `my_table`. The data engineer wants to delete all table metadata and data.

They run the following command:

`DROP TABLE IF EXISTS my_table`

While the object no longer appears when they run `SHOW TABLES`, the data files still exist.

Which of the following describes why the data files still exist and the metadata files were deleted?

- A. The table's data was larger than 10 GB
- B. The table was managed
- C. The table's data was smaller than 10 GB
- D. The table did not have a location
- E. The table was external

Answer: E

Explanation:

An external table is a table that is defined in the metastore and points to an existing location in the storage system. When you drop an external table, only the metadata is deleted from the metastore, but the data files are not deleted from the storage system. This is because external tables are meant to be shared by multiple applications and users, and dropping them should not affect the data availability. On the other hand, a managed table is a table that is defined in the metastore and also managed by the metastore. When you drop a managed table, both the metadata and the data files are deleted from the metastore and the storage system, respectively. This is because managed tables are meant to be exclusive to the application or user that created them, and dropping them should free up the storage space. Therefore, the correct answer is C, because the table was external and only the metadata was deleted when the table was dropped. References: Databricks Documentation - Managed and External Tables, Databricks Documentation - Drop Table

NEW QUESTION # 74

A data analyst has developed a query that runs against Delta table. They want help from the data engineering team to implement a series of tests to ensure the data returned by the query is clean. However, the data engineering team uses Python for its tests rather than SQL.

Which of the following operations could the data engineering team use to run the query and operate with the results in PySpark?

- A. spark.table
- **B. spark.sql**
- C. SELECT * FROM sales
- D. spark.delta.table
- E. There is no way to share data between PySpark and SQL.

Answer: B

Explanation:

Explanation

```
from pyspark.sql import SparkSession
spark = SparkSession.builder.getOrCreate()
df= spark.sql("SELECT * FROM sales")
print(df.count())
```

NEW QUESTION # 75

A data engineer needs to combine sales data from an on-premises PostgreSQL database with customer data in Azure Synapse for a comprehensive report. The goal is to avoid data duplication and ensure up-to-date information How should the data engineer achieve this using Databricks?

- A. Export data from both sources to CSV files and upload them to Databricks
- B. Develop custom ETL pipelines to ingest data into Databricks
- C. Manually synchronize data from both sources into a single database
- **D. Use Lakehouse Federation to query both data sources directly**

Answer: D

NEW QUESTION # 76

A new data engineering team has been assigned to work on a project. The team will need access to database customers in order to see what tables already exist. The team has its own group team.

Which of the following commands can be used to grant the necessary permission on the entire database to the new team?

- A. GRANT CREATE ON DATABASE customers TO team;
- B. GRANT USAGE ON CATALOG team TO customers;
- C. GRANT VIEW ON CATALOG customers TO team;
- **D. GRANT USAGE ON DATABASE customers TO team;**

Answer: D

NEW QUESTION # 77
