Vce CPC-CDE-RECERT File - CPC-CDE-RECERT Certification Sample Questions

Nowadays passing the CPC-CDE-RECERT test certification is extremely significant for you and can bring a lot of benefits to you. Passing the CPC-CDE-RECERT test certification does not only prove that you are competent in some area but also can help you enter in the big company and double your wage. And our CPC-CDE-RECERT Exam Questions are in good quality. As long as you study with our CPC-CDE-RECERT learning guide, you will find that the content is easily to understand and the displays are enjoyable.

CyberArk CDE-CPC Recertification Sample Questions (Q100-Q105):

NEW QUESTION # 100

What must be specified when authenticating to Privilege Cloud during the Secure Tunnel install?

- A. CaseID
- B. Vault IP Address
- C. Subdomain or Customer ID
- D. Privilege Cloud URL

Answer: C

Explanation:

During Secure Tunnel deployment, CyberArk's installation flow includes an "Authenticate to Privilege Cloud" step where you must enter Subdomain or Customer ID (plus the provided username/password). The documentation explicitly says to enter only the subdomain identifier (not the whole URL) or use the Customer ID provided by CyberArk.

NEW QUESTION # 101

What is the correct CyberArk user to use when installing the Privilege Cloud Connector software?

- A. Administrator
- B. Installer
- C. `installeruser@<suffix>`
- D. `<subdomain>_admin`

Answer: C

NEW QUESTION # 102

You want to improve performance on the CPM by restricting accounts for the CYBRWINDAD platform to only the WINDEMEA and WINDEMEA_ADMIN Safes. How do you set this in CyberArk?

- A. In the settings for Configuration/CPM assigned to the WINDEMEA and WINDEMEAADMIN Safes, configure AllowedSafes and set it to `(WINDEMEA)|(WINDEMEAADMIN)`.
- B. Modify `cpm.ini` on the relevant CPM(s) and add `AllowedSafesCYBRWINDAD` and set it to `(WINDEMEA)|(WINDEMEAADMIN)`.
- C. In the CYBRWINDAD platform, under Automatic Password Management > General, configure AllowedSafes and set it to `(WINDEMEA)|(WINDEMEA_ADMIN)`.
- D. In the CYBRWINDAD platform, under UI & Workflows > Properties > Optional, configure AllowedSafes and set it to `(WINDEMEA)|(WINDEMEA_ADMIN)`.

Answer: C

Explanation:

CyberArk's official guidance for restricting a platform to specific Safes is to set the AllowedSafes platform parameter in the General section of the platform under Automatic Password Management.

AllowedSafes uses a regular expression to match Safe names, which is why a pattern such as `(WINDEMEA)|(WINDEMEA_ADMIN)` is used to allow exactly those two Safe names.

NEW QUESTION # 103

According to best practice, when considering the location of PSM Connector servers in Privilege Cloud environments, where should the PSM be placed?

- A. near the CPM servers
- B. near the Vault (closer to the external internet connection)
- C. near the Users
- D. near the target devices

Answer: D

Explanation:

According to best practice, when considering the location of PSM Connector servers in Privilege Cloud environments, the PSM should be placed near the target devices. This placement minimizes latency and maximizes performance by reducing the distance that data has to travel between the PSM servers and the devices they are managing. This is particularly important for maintaining high efficiency and response times during remote session management and operations, which are critical for the overall effectiveness of the Privilege Cloud environment.

NEW QUESTION # 104

Which tool configures the user object that will be used during the installation of the PSM for SSH component?

- A. ConfigureUserPass
- **B. CreateCredFile**
- C. ConfigureCredFile
- D. CreateUserPass

Answer: B

Explanation:

The tool used to configure the user object for the installation of the PSM for SSH component is CreateCredFile. This tool is responsible for creating a credentials file that stores the necessary user details required during the installation process, ensuring secure and correct authentication.
