Pdf Analytics-DA-201 Free & Updated Analytics-DA-201 Demo

If you really long for recognition and success, you had better choose our Analytics-DA-201 exam demo since no other exam demo

has better quality than ours. Trust us and you will be sure to win a beautiful future. As you know, in most cases, people achieve success because they size up the situation. Now that using our Analytics-DA-201 practice materials have become an irresistible trend, why don't you accept it with pleasure? We will never let you down!

Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP Clean Core Extensibility and ABAP Cloud: This part of the exam targets the SAP S • 4HANA Technical Consultant and covers concepts of clean core extensibility using ABAP in the cloud. The focus is on in-app and side-by-side extensibility techniques, ensuring that custom code complies with cloud-readiness principles and does not compromise the upgrade stability of core systems.
Topic 2	• ABAP RESTful Application Programming Model: This section of the exam evaluates the capabilities of the SAP S • 4HANA Technical Consultant in using the ABAP RESTful Application Programming Model (RAP). It focuses on understanding the structure and components of RAP, including behavior definitions, service bindings, and metadata extension. The goal is to validate the ability to develop modern and scalable applications using RAP.
Topic 3	• ABAP SQL and Code Pushdown: This section of the exam measures the competencies of the SAP ABAP Cloud Developer related to performance optimization through ABAP SQL and code pushdown techniques. It ensures that the developer understands how to shift logic to the database layer using efficient SQL scripting to enhance performance in data-intensive applications.
Topic 4	• Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S • 4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.

Salesforce Certified Tableau Data Analyst Sample Questions (Q88-Q93):

NEW QUESTION # 88
You have the following chart that shows the cumulative of sales from various dates.
You want the months to appear as shown in the following chart.
What should you do?

- A. Convert the date to Continuous
- B. Select Show Misting Values for the dale
- C. Convert the date to Exact Date
- D. Convert the date to Attribute

Answer: A

Explanation:
References: https://help.tableau.com/current/pro/desktop/en-us/dates.htm https://help.tableau.com/current/pro /desktop/en-us/dates_continuous.htm https://help.tableau.com/current/pro/desktop/en-us/formatting.htm To ensure the dates are shown in a continuous axis, you should convert the date to a continuous field. This will display the months in a sequence without any breaks, which is needed for showing a trend over time like the cumulative sum of sales.

NEW QUESTION # 89
You have the following dataset.
You want to create a new calculated dimension field named Category that meets the following conditions:
. When Subject is Computer Science or Science, Category must be Sciences.
. When Subject is English or Social Studies, Category must be Humanities.
Which two logical functions achieve the goal? Choose two.

- A. CASE [Subject]
  WHEN 'Computer Science' THEN 'Sciences'
  WHEN 'Science' THEN 'Sciences'
  WHEN 'English' THEN 'Humanities'
  WHEN 'Social Studies' THEN 'Humanities'
  End
- B. IF ENDSWITH ([Subject], 'Computer Science') THEN 'Sciences' ELSE 'Humanities' END
- C. IIF((CONTAINS ([Subject], 'Science') = TRUE) , 'Humanities', 'Sciences')
- D. IF [Subject]- 'Science' THEN 'Sciences'
  ELSEIF [Subject]='English' THEN 'Humanities'
  ELSEIF [Subject]-'Social Studies' THEN 'Humanities'
  ELSEIF [Subject]= 'Computer Science' THEN 'Sciences'
  END

Answer: A,D

Explanation:
To create a new calculated dimension field named Category that meets the given conditions, you can use either the IF or the CASE logical function. Both functions allow you to evaluate an expression and return a value based on different scenarios. Option A uses the IF function with multiple ELSEIF clauses to check the value of the Subject field and assign it to either 'Sciences' or 'Humanities'. Option D uses the CASE function with multiple WHEN clauses to do the same thing. Both options will produce the same result, but the CASE function is more concise and easier to read. Option B is incorrect because it will assign 'Humanities' to any subject that contains 'Science' in its name, which is not the desired outcome. Option C is incorrect because it will only check if the subject ends with 'Computer Science' and ignore the other subjects. References:

NEW QUESTION # 90
From Tableau Desktop you sign in lo a Tableau Server site.
What appears in the list of available data sources when you search for a published data source?

- A. All the data sources published to the Tableau Server
- B. All the data sources published to the site within the folders to which you have access
- C. All the data sources published to the Tableau Server within the folders to which you have access
- D. All the data sources published to the site

Answer: B

Explanation:
When you sign in to a Tableau Server site from Tableau Desktop and search for a published data source, you will see all the data sources published to the site within the folders to which you have access. You will not see data sources published to other sites or folders that you do not have permission to view. You can also filter your search by project, owner, or tag. References:
https://help.tableau.com/current/pro/desktop/en-us
/connect_basic.htm https://help.tableau.com/current/pro/desktop/en-us/connect_tableauserver.htm When signed in to Tableau Server from Tableau Desktop, you'll only be able to see the data sources that have been published to the site and are within the folders that you have been granted access to. Tableau's permission and project structure mean that you won't see all data sources from the entire server unless you have permissions to do so.

NEW QUESTION # 91
You need the top 10 values to appear in a different color. The lop 10 values must be colored dynamically.
What should you do?

- A. Select the lop 10 bars, create a set. and then drag the set to Color on the Marks card.
- B. Select the top 10 bars, and then change the color by selecting Color on the Marks card.
- C. Create a set that has a top 10 condition, and then drag the set to Color on the Marks card.
- D. Create a group field that groups the top 10 values into one group and the rest of the values into another group. Drag the group field to Color on the Marks card.

Answer: C

NEW QUESTION # 92

You are developing a data source in Tableau Prep.

You have two tables named Orders and Employees.

The Orders table was created in 2019 and contains the following columns.

The Employees table contains all the employee information for the various sales teams in the sales department and contains the following columns

You want to prepare the data so that you can analyze sales trends over time for every sales team.

Which three actions should you perform in order? (Place the three correct options in order. Use the arrows to move Options to Answer Area. Use Answer Area arrows to re-order the options.)

Answer:

Explanation:

Explanation:

There are different ways to prepare the data in Tableau Prep, but one possible answer is:

Answer area:

* Join the tables.

* Aggregate the data by Sales Team.

* Add the following filter to the Employees table: Sale Team - Team Alpha.

To analyze sales trends over time for every sales team, you need to combine the data from the Orders and Employees tables. You can do this by joining the tables on the Rep ID column, which is a common identifier for both tables. This will create a single table with all the columns from both tables. Next, you need to aggregate the data by Sales Team, which is the level of analysis you want. You can do this by grouping the data by the Sales Team column and applying an aggregation function (such as sum, average, count, etc.) to the other columns that you want to measure (such as Total Amount, Rep Tenure, etc.). This will create a summary table with one row for each sales team and the aggregated values for the other columns. Finally, you need to filter the data to focus on a specific sales team, such as Team Alpha. You can do this by adding a filter to the Employees table and selecting only the rows where Sales Team equals Team Alpha. This will remove the rows for other sales teams and keep only the data for Team Alpha.
