In our software version of Analytics-Arch-201 exam questions the unique point is that you can take part in the Analytics-Arch-201 practice test before the real Analytics-Arch-201 exam. You never know what you can till you try. so that they can enrich their knowledge before the real Analytics-Arch-201 exam. However, confidence in yourself is the first step on the road to success. Our mock exam provided by us can help every candidate to get familiar with the Real Analytics-Arch-201 Exam, which is meaningful for you to take away the pressure and to build confidence in the approach.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.

Topic 2	<ul style="list-style-type: none"> • Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.
Topic 3	<ul style="list-style-type: none"> • Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.

Professional Latest Analytics-Arch-201 Test Answers - How to Download for Exam Analytics-Arch-201 Syllabus free

With the rapid development of the world economy and frequent contacts between different countries, looking for a good job has become more and more difficult for all the people. So it is very necessary for you to get the Analytics-Arch-201 certification, in order to look for a good job, you have to increase your competitive advantage in the labor market and make yourself distinguished from other job-seekers. And our Analytics-Arch-201 Exam Questions are specially designed for you as we can help you pass the Analytics-Arch-201 exam successfully with the least time and effort. Just come and buy our Analytics-Arch-201 practice guide!

Salesforce Certified Tableau Architect Sample Questions (Q24-Q29):

NEW QUESTION # 24

In a scenario where you need to change the 'Run As' service account for Tableau Server on a Windows system, what is a crucial step to ensure a smooth transition?

- A. Temporarily granting the new 'Run As' account administrative privileges on the entire network
- **B. Ensuring the new 'Run As' account has the correct permissions on the Tableau Server directories and registry keys**
- C. Changing the password of the new 'Run As' account to match the old account
- D. Disabling the firewall settings on the Windows system during the account transition

Answer: B

Explanation:

Ensuring the new 'Run As' account has the correct permissions on the Tableau Server directories and registry keys When changing the 'Run As' service account for Tableau Server, it's crucial to ensure that the new account has the correct permissions on the Tableau Server directories and registry keys. This step is necessary to allow the new account to access and manage the server's files and settings effectively. Option A is incorrect because granting administrative privileges on the entire network is excessive and poses a security risk. Option C is incorrect as matching the passwords of the old and new accounts is not relevant to ensuring the correct permissions are set. Option D is incorrect because disabling firewall settings is not related to changing the 'Run As' service account and can compromise system security.

NEW QUESTION # 25

When planning to implement Tableau Bridge in an organization using Tableau Cloud, what factor is critical to ensure live data connectivity from on-premises data sources?

- A. Installing Tableau Bridge on every user's local machine to decentralize data connectivity

- B. Configuring Tableau Bridge to refresh data only during off-peak hours to reduce network load
- **C. Ensuring that Tableau Bridge is installed on a machine with a constant and stable internet connection**
- D. Allocating a dedicated server solely for running Tableau Bridge to manage all data connections

Answer: C

Explanation:

Ensuring that Tableau Bridge is installed on a machine with a constant and stable internet connection For effective implementation of Tableau Bridge, it is essential to install it on a machine with a reliable and stable internet connection. This is crucial for maintaining live data connectivity from on-premises data sources to Tableau Cloud, ensuring that the data remains up-to-date and accessible for cloud-based analytics. Option A is incorrect because dedicating a server solely for Tableau Bridge is not necessary and may be resource-intensive. Option C is incorrect as installing Tableau Bridge on every user's local machine is impractical and can lead to management and security issues. Option D is incorrect because Tableau Bridge's primary function is to enable live data connectivity, not just scheduled refreshes during off-peak hours.

NEW QUESTION # 26

When installing Tableau Server on a Windows system, which step is essential to ensure a successful installation using the Installation Wizard?

- A. Setting up a dedicated virtual machine for the Tableau Server installation process
- B. Configuring Windows to automatically update all system drivers during the Tableau Server installation
- **C. Running the Installation Wizard as an administrator to ensure sufficient privileges for setup**
- D. Disabling all antivirus and firewall software on the Windows system during installation

Answer: C

Explanation:

Running the Installation Wizard as an administrator to ensure sufficient privileges for setup When installing Tableau Server on Windows, it is crucial to run the Installation Wizard as an administrator. This ensures that the installer has the necessary privileges to access system resources and configure settings required for the successful installation of Tableau Server. Option A is incorrect because while antivirus or firewall software can sometimes interfere with installations, it's not recommended to disable all security software as a first step. Option C is incorrect as automatically updating system drivers during the installation is not a standard requirement for installing Tableau Server. Option D is incorrect because setting up a dedicated virtual machine is not a requirement for installing Tableau Server, though it can be an option based on organizational policies.

NEW QUESTION # 27

A company is experiencing high demand for complex data processing tasks in its Tableau environment. To optimize performance, when should the company consider using external services?

- A. External services should never be used with Tableau Server
- B. Use external services for all data processing tasks, regardless of complexity
- C. Only for basic data visualization tasks to reduce the load on Tableau Server
- **D. For complex data blending and analytics tasks that are resource-intensive**

Answer: D

Explanation:

For complex data blending and analytics tasks that are resource-intensive Utilizing external services for complex and resource-intensive tasks like data blending and analytics can help in optimizing the performance of the Tableau environment by offloading these demanding processes. Option A is incorrect because basic data visualization tasks are typically well-handled by Tableau Server itself. Option C is incorrect as external services can be beneficial for specific re-source-intensive tasks. Option D is incorrect because using external services for all tasks, regardless of complexity, can be inefficient and unnecessary.

NEW QUESTION # 28

During the validation of a disaster recovery/high availability strategy for Tableau Server, what is a key element to test to ensure data integrity?

- **A. Accuracy of data and dashboard recovery post-failover**

- B. Speed of the failover to a secondary server
- C. Frequency of complete system backups
- D. Network bandwidth availability during the failover process

Answer: A

Explanation:

Accuracy of data and dashboard recovery post-failover The accuracy of data and dashboard recovery post-failover is crucial in validating a disaster recovery/high availability strategy. This ensures that after a failover, all data, visualizations, and dashboards are correctly re-stored and fully functional, maintaining the integrity and continuity of business operations. Option A is incorrect because while the frequency of backups is important, it does not directly validate the effectiveness of data recovery in a disaster scenario. Option B is incorrect as the speed of failover, although important for minimizing downtime, does not alone ensure data integrity post-recovery. Option D is incorrect because network bandwidth, while impacting the performance of the failover process, does not directly relate to the accuracy and integrity of the recovered data and dashboards.

NEW QUESTION # 29

.....

Our Analytics-Arch-201 learning materials provide multiple functions and considerate services to help the learners have no inconveniences to use our product. We guarantee to the clients if only they buy our Analytics-Arch-201 study materials and learn patiently for some time they will be sure to pass the Analytics-Arch-201 test with few failure odds. The pass rate of our Analytics-Arch-201 exam questions is high as 98% to 100%, which is unique in the market. And the data also proved and tested the high-quality of our Analytics-Arch-201 practice guide.
