Specifications of the ISTQB ISTQB-CTFL Desktop Practice Test Software

With the increasing marketization, the product experience marketing has been praised by the consumer market and the industry. Attract users interested in product marketing to know just the first step, the most important is to be designed to allow the user to try before buying the ISTQB Certified Tester Foundation Level (CTFL v4.0) study training dumps, so we provide free pre-sale experience to help users to better understand our products. The user only needs to submit his E-mail address and apply for free trial online, and our system will soon send free demonstration research materials of ISTQB-CTFL Latest Questions to download. If the user is still unsure which is best for him, consider applying for a free trial of several different types of test materials. It is believed that through comparative analysis, users will be able to choose the most satisfactory ISTQB-CTFL test guide.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q159-Q164):

NEW QUESTION # 159
Which of the following statements is true?

- A. Non-functional testing includes testing of both technical and non-technical quality characteristics
- B. Functional testing focuses on what the system should do while non-functional testing on the internal structure of the system
- C. The test techniques that can be used to design white-box tests are described in the ISO/IEC 25010 standard
- D. Testers who perform functional tests are generally expected to have more technical skills than testers who perform non-functional tests

Answer: A

Explanation:
Non-functional testing includes testing of both technical and non-technical quality characteristics. Non- functional testing is the process of testing the quality attributes of a system, such as performance, usability, security, reliability, etc. Non-functional testing can be applied at any test level and can use both black-box and white-box test techniques. Non-functional testing can cover both technical aspects, such as response time, throughput, resource consumption, etc., and non-technical aspects, such as user satisfaction, accessibility, compliance, etc. Therefore, option B is the correct answer.
ISTQB Certified Tester Foundation Level Syllabus v4.01, Section 1.3.1, page 13; ISTQB Glossary v4.
02, page 40.

NEW QUESTION # 160
Which of the following is a key characteristic of informal reviews?

- A. Low cost
- B. Metrics analysis
- C. Individual preparation
- D. Kick-off meeting

Answer: A

Explanation:
A key characteristic of informal reviews is low cost. Informal reviews are a type of review that does not follow a formal process or have any formal documentation. Informal reviews are usually performed by individuals or small groups of peers or colleagues who have some knowledge or interest in the product under review.
Informal reviews can be done at any time and for any purpose, such as checking for errors, clarifying doubts, sharing ideas, etc. Informal reviews have low cost, as they do not require much time, effort, or resources to conduct. The other options are not key characteristics of informal reviews. Kick-off meeting is a characteristic of formal reviews, such as inspections or walkthroughs. Kick-off meeting is a meeting that is held before the review process starts, where the roles and responsibilities of the participants are defined, the objectives and scope of the review are agreed, and the logistics and schedule of the review are planned. Individual preparation is a characteristic of formal reviews, such as inspections or walkthroughs. Individual preparation is an activity that is performed by the reviewers before the review meeting, where they examine the product under review and identify any issues or questions that need to be discussed or resolved during the review meeting. Metrics analysis is a characteristic of formal reviews, such as inspections or walkthroughs. Metrics analysis is an activity that is performed after the review process is completed, where the data and results of the review are collected and analyzed to measure the effectiveness and efficiency of the review, as well as to identify any improvement actions or lessons learned for future reviews. NEW QUESTION # 161

Which ONE of the following options explains a benefit of independent testing the BEST?

- **A. Independent testers are likely to recognize different types of failures compared to developers.**
- B. Developers may lose a sense of responsibility for the quality of the product they develop.
- C. The testers can be isolated from the development team and thus avoid acquiring the same bias as the developers.
- D. Independent testers may lack information regarding the test object.

Answer: A

Explanation:
Comprehensive and Detailed In-Depth Explanation:
Independent testers provide a fresh perspective and are more likely to identify failures that developers might overlook due to their familiarity with the software (C). Independent testing helps avoid cognitive biases, improves defect detection, and enhances the overall quality assurance process. While A and D touch on related concepts, they do not directly define the benefit as well as C does. Option B highlights a potential challenge rather than a benefit.

NEW QUESTION # 162

Mark the correct sentences:
* Defects are a result of environmental conditions and are also referred to as "Failures"
* A human mistake may produce a defect
* A system mil totally fail to operate correctly when a failure exists in it
* When a defect exists in a system it may result in a failure
* Defects occur only as a result of technology changes

- **A. II, IV**
- B. IV, V
- C. I, II
- D. II, III, IV

Answer: A

Explanation:
The question is about marking the correct sentences among the given statements related to defects, failures, and mistakes. According to the ISTQB glossary, the definitions of these terms are1:
Defect: A flaw in a component or system that can cause the component or system to fail to perform its required function, e.g. an incorrect statement or data definition. A defect, if encountered during execution, may cause a failure of the component or system.
Failure: An event in which a component or system does not perform a required function within specified limits.
Mistake: A human action that produces an incorrect result.
Therefore, out of the five given statements, only two are correct, namely:
A human mistake may produce a defect: This is true, as a mistake is a source or cause of a defect, e.g. a programmer may make a mistake in writing a code statement, which results in a defect in the software component.
When a defect exists in a system it may result in a failure: This is true, as a defect is a potential or actual cause of a failure, e.g. a defect in the software component may cause the system to fail to perform a required function when the defect is encountered during execution.
The other three statements are incorrect, namely:
Defects are a result of environmental conditions and are also referred to as "Failures": This is false, as defects are not a result of environmental conditions, but of mistakes or other factors, and defects are not the same as failures, but rather the causes of failures.
A system will totally fail to operate correctly when a failure exists in it: This is false, as a system may not necessarily fail completely or stop operating when a failure occurs, but may continue to operate with reduced functionality or performance, or with incorrect results.
Defects occur only as a result of technology changes: This is false, as defects can occur due to various reasons, not only technology changes, such as human mistakes, design flaws, requirement changes, hardware failures, etc.

NEW QUESTION # 163

Given the following review types and review characteristics:
a. Pair review

b. Walkthrough
c. Technical review
d. Inspection
1. Formal
2. Informal
3. Purposes include evaluating the quality of the work product under review and generating new ideas (e.g., brainstorming solutions)
4. Purposes include Improving the software product and training the review participants Which of the following BEST matches the review type with the review characteristic?

- A. a-4, b-3. c-2. d-1
- B. a-2, b-3, c-4, d-1
- C. a-2, b-4, c-3. d-1
- D. a-1. b-4, c-3. d-2

Answer: B

Explanation:
Pair reviews are informal and typically involve two people reviewing the work product together, often in an informal setting. Walkthroughs are more formal and aim to educate stakeholders and evaluate the product, serving the dual purpose of improving the product and training participants. Technical reviews have a strong focus on improving the product's quality, often involving technical stakeholders. Inspections are the most formal review type and are aimed primarily at detecting defects.
