Quiz SAP - C_TS470_2412 –High Hit-Rate Examinations Actual Questions

To increase your chances of success, consider utilizing the PassLeaderVCE C_TS470_2412 Exam Questions, which are valid, updated, and reflective of the actual C_TS470_2412 exam. Don't miss the opportunity to strengthen your SAP C_TS470_2412 exam preparation with these valuable questions. The PassLeaderVCE is a leading platform that has been assisting the SAP C_TS470_2412 Exam candidates for many years. Over this long time period countless C_TS470_2412 exam candidates have passed their SAP C_TS470_2412 certification exam. They got success in SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service exam with flying colors and did a job in top world companies.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q50-Q55):

NEW QUESTION # 50
Which of the following are features of the clean core dashboard? Note: There are 2 correct answers to this question.

- A. Customers can use the dashboard in the dev, test, and production tenants.
- B. It can be accessed by using SAP For Me.
- C. It can be used in all SAP S/4HANA Cloud editions.
- D. Customers can grant access to the dashboard to partners.

Answer: B,D

Explanation:

TheClean Core Dashboardis a tool provided by SAP to help customers monitor and maintain a clean core strategy in their SAP S/4HANA systems. A clean core approach ensures that the ERP system remains up-to- date, cloud-compliant, and free of unnecessary modifications, facilitating smooth upgrades and innovation adoption. This dashboard provides insights into system customizations, extensions, and compliance with clean core principles. Let's evaluate each option based on official SAP documentation and functionality as of March

2025:

* A. Customers can use the dashboard in the dev, test, and production tenants: The Clean Core Dashboard is primarily designed to monitor the clean core compliance ofproductiveSAP S/4HANA systems, as its purpose is to provide actionable insights into the live environment where business processes are executed. While development (dev) and test tenants are critical for building and validating extensions, the dashboard's focus is on the production tenant to ensure operational stability and upgrade readiness. SAP documentation specifies that it targets productive systems (e.g., SAP S/4HANA Cloud Private Edition production tenants), and there's no explicit mention of it being available across all tenant types (dev, test, production) in a unified manner. Thus, this option is not a confirmed feature.

* B. It can be accessed by using SAP for Me: This is a key feature of the Clean Core Dashboard.SAP for Meis SAP's customer portal, providing a centralized interface for accessing various tools, services, and insights related to SAP solutions. The Clean Core Dashboard is integrated into SAP for Me, offering customers a user-friendly way to view tiles and reports on their system's clean core status (e.g., custom code usage, API compliance, and extension metrics). This accessibility aligns with SAP's strategy to consolidate customer-facing tools in a single portal, making it a verified feature.

* C. Customers can grant access to the dashboard to partners: This is another confirmed feature. SAP allows customers to share access to the Clean Core Dashboard with implementation partners or service providers via SAP for Me's authorization management. This capability supports collaboration, enabling partners to assist in analyzing and optimizing the system for clean core compliance (e.g., during RISE with SAP engagements). The dashboard's design facilitates transparency and joint efforts between customers and partners, making this a standard feature in the private cloud context.

* D. It can be used in all SAP S/4HANA Cloud editions: This is not entirely accurate. The Clean Core Dashboard is specifically tailored forSAP S/4HANA Cloud Private Editionand, to some extent, SAP S

/4HANA on-premise systems, where customizations and extensions are more prevalent and need monitoring. InSAP S/4HANA Cloud Public Edition, the system is inherently clean by design (no source code modifications are allowed, only extensions via SAP BTP or in-app tools), reducing the need for such a dashboard. While clean core principles apply across all editions, the dashboard's functionality is most relevant to Private Edition and on-premise deployments, where customers have greater control over customizations. SAP documentation highlights its use in Private Edition contexts (e.

g., RISE with SAP), not universally across all editions.

The correct answers, B and C, reflect the dashboard's accessibility via SAP for Me and its collaborative feature with partners, as outlined in SAP's clean core strategy resources. These features enhance its utility in maintaining a modern, flexible, and cloud-compliant ERP system, particularly in SAP S/4HANA Cloud Private Edition.

Extract from SAP Documentation: "The Clean Core Dashboard, accessible via SAP for Me, provides transparency on system customizations and allows customers to collaborate with partners to ensure clean core compliance in productive SAP S/4HANA Cloud Private Edition systems." (SAP Community,10 Steps to Clean Core for SAP S/4HANA Cloud Private Edition for Customers, 2024).

NEW QUESTION # 51
Where do you define the life cycle user statuses that are used for a repair object?

- A. They are directly assigned to the repair order transaction type (like REPO).
- B. They are determined via a profile assigned to the in-house repair transaction type (like REPA).
- C. They are assigned to the transaction type of the repair confirmation (like REPC).
- D. They are assigned to user statuses from the status profile of the in-house repair item category (like REPI).

Answer: D

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, the life cycle user statuses for a repair object in the in- house repair process (scope item 3XK) are managed as follows:

* They are assigned to user statuses from the status profile of the in-house repair item category (like REPI): The item category (e.g., REPI) defines the repair object's lifecycle stages (e.g., received, in repair, completed). A status profile is assigned to this item category in Customizing, and user statuses within this profile track the repair object's progression.
* Transaction type of the repair confirmation (REPC): This is for confirmations, not repair object lifecycle statuses.
* Repair order transaction type (REPO): The order type controls the overall process, not item-level lifecycle statuses.
* Profile assigned to the in-house repair transaction type (REPA): While a profile exists, it's the item category's status profile that governs lifecycle statuses. This is configured under "Settings for Service Transactions" in SAP Customizing. "Life cycle user statuses for repair objects are defined in the status profile assigned to the in-house repair item category (e.g., REPI)." (SAP Help Portal, In-House Repair Configuration).

NEW QUESTION # 52

When creating a reservation in a service order, which storage location can be used? Note: There are 2 correct answers to this question.

- A. The storage location that is assigned to the sales organization of the service order
- B. The storage location that is assigned to the service organization of the service order
- C. The storage location that is assigned to the service employee of the service order
- D. The storage location that is assigned to the work center of the service order

Answer: B,D

Explanation:
A reservation in a service order reserves materials (e.g., spare parts) from a storage location. The correct answers are A and C. Let's explore this in detail.
Reservation Process:
When a service order includes materials (e.g., via a BOM or manual entry), the system creates a reservation (movement type 261) specifying the storage location.
* Storage location assigned to the service organization (A): The service organization (defined in org management) can be linked to a default storage location in customizing (e.g., SPRO # Service # Organizational Data). This location is proposed for reservations, reflecting where the service team typically sources parts.
* Storage location assigned to the work center (C): The work center (e.g., "Repair Shop") executing the order can have a storage location assigned in its master data (transaction IR02). This ensures parts are reserved from the work center's designated stock.
Why Not the Others?
* Sales organization (B): Sales orgs handle commercial aspects, not physical stock locations for service execution.
* Service employee (D): Employees don't have storage locations assigned; they're linked to work centers or org units.
Example:
Service order for Plant 1000, service org "SERV1" (storage loc. "0001"), work center "WC01" (storage loc.
"0002"). Reservation can use "0001" or "0002" based on configuration.
"Reservations in service orders can use storage locations assigned to the service organization or work center."

NEW QUESTION # 53

Which types of service contract items are supported? Note: There are 3 correct answers to this question.

- A. Price agreement
- B. Value / quantity
- C. Ad hoc billing
- D. Target / quantity
- E. Price adaptation

Answer: A,B,D

Explanation:
SAP S/4HANA Cloud Private Edition, Service supports various service contract item types in scope item
3MO (Service Contract Management):
* Target / quantity: Items based on a target quantity (e.g., number of service events), commonly used in recurring services.
* Value / quantity: Items defined by a monetary value or quantity, allowing flexible billing based on usage or fixed amounts.
* Price agreement: Items with predefined pricing conditions, ensuring consistent billing terms over the contract duration.
* Price adaptation: Not a standard contract item type; price changes are managed via conditions, not as a distinct item type.
* Ad hoc billing: Refers to a billing method, not a contract item type. These types support flexible contract management in SAP

S/4HANA Service."Service contracts support target/quantity, value
/quantity, and price agreement items for flexible service offerings." (SAP Help Portal, Service Contract Management).

NEW QUESTION # 54
Which of the following is the correct sequence when creating a hierarchical structure in organizational management?

- A. Position # Holder # User # Organizational unit
- B. Position # User # Organizational unit # Holder
- C. Organizational unit # Holder # User # Position
- D. Organizational unit # Position # Holder # User

Answer: D

Explanation:
In SAP S/4HANA Organizational Management (integrated with HCM or service structures):
* Organizational unit # Position # Holder # User: The sequence starts with defining an organizational unit (e.g., department), then positions within it (e.g., service technician), followed by assigning holders (employees) to positions, and finally linking users (system logins) to holders. This hierarchy is built using transaction PPOME or similar tools.
* Other sequences disrupt the logical top-down structure required for organizational management.This aligns with SAP's standard organizational setup process."Create organizational units, then positions, assign holders, and link users in that order for a hierarchical structure." (SAP Help Portal, Organizational Management).

NEW QUESTION # 55
......

Our C_TS470_2412 exam questions will be the easiest access to success without accident for you. Besides, we are punctually meeting commitments to offer help on C_TS470_2412 study materials. So there is no doubt any information you provide will be treated as strictly serious and spare you from any loss of personal loss. There are so many success examples by choosing our C_TS470_2412 Guide quiz, so we believe you can be one of them.
