## EC-COUNCIL Computer Hacking Forensic Investigator (CHFI-v11) Sample Questions (Q786-Q791):

### NEW QUESTION # 786

In a cyber-forensic investigation, a CHFI expert found a Linux system unexpectedly booting into a different OS kernel. The system was configured with the Grand Unified Bootloader (GRUB). The expert suspects that an attacker may have tampered with the bootloader stage of the Linux boot process. Which one of the following is NOT a step performed during the bootloader stage in a normal Linux boot process?

- A. Loading the kernel into memory
- B. Loading the Linux kernel and optional initial RAM disk
- C. Detecting the device that contains the file system and loading the necessary modules
- D. Execution of the Linuxrc program to generate the real file system for the kernel

**Answer: D**

### NEW QUESTION # 787

An attorney requests a Computer Hacking Forensics Investigator to check for Dropbox installation on a suspect's hard drive,

suspected to contain stolen intellectual property. Given the complexity of the investigation, which of the following steps should be the investigator's primary approach?

- A. The investigator should skip hypothesis formulation and move directly to an experimental design
- **B. The investigator should formulate a hypothesis considering the Operating System (OS) and the probable Dropbox installation artifacts location in directories: C:\Users\Admin\AppData\Roaming\ or C:\Program Files (x86) or C:\Program Files**
- C. The investigator should use multiple open-source tools regardless of their market value to start the investigation immediately
- D. The investigator should immediately begin the search for Dropbox installation artifacts without considering the Operating System (OS)

**Answer: B**

#### **NEW QUESTION # 788**
