Our Check Point Certified Security Administrator - R82 test torrent has been well received and have reached 99% pass rate with all our dedication. As a powerful tool for a lot of workers to walk forward a higher self-improvement, our 156-215.82 certification training continued to pursue our passion for advanced performance and human-centric technology. Only 20-30 hours are needed for you to learn and prepare our 156-215.82 test questions for the exam and you will save your time and energy. No matter you are the students or the in-service staff you are busy in your school learning, your jobs or other important things and can't spare much time to learn. But you buy our 156-215.82 Exam Materials you will save your time and energy and focus your attention mainly on your most important thing. You only need several hours to learn and prepare for the exam every day.

Many candidates compliment that CheckPoint 156-215.82 study guide materials are best assistant and useful for qualification exams, they have no need to purchase other training courses or books to study, and only by practicing our CheckPoint 156-215.82 Exam Braindumps several times before exam, they can pass exam in short time easily.

New 156-215.82 Test Materials, 156-215.82 New Practice Materials

Our CheckPoint 156-215.82 test braindump materials is popular based on that too. As we all know the passing rate for exams is low, the wise choice for candidates will select valid CheckPoint 156-215.82 test braindump materials to make you pass exam surely and fast. Our CheckPoint 156-215.82 test simulations will help you twice the result with half the effort.

CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q171-Q176):

NEW QUESTION # 171

What is the primary benefit of Autonomous Threat Prevention?

- A. It blocks all HTTPS traffic by default
- **B. It simplifies and enhances cybersecurity management by automating the configuration and updating of security policies**
- C. It accelerates encrypted traffic
- D. It replaces SSL/TLS with a proprietary protocol

Answer: B

Explanation:

The correct answer is D. Autonomous Threat Prevention simplifies threat-prevention administration by using predefined profiles and automated updates to keep protections aligned with Check Point's recommended security posture. The administrator selects a profile that matches the protected segment, such as perimeter, cloud/data center, internal network, or guest network, rather than manually tuning every protection from scratch. Option A is false because Autonomous Threat Prevention does not block all HTTPS traffic by default. Option B is technically absurd; Check Point does not replace SSL/TLS with a proprietary protocol. Option C is wrong because traffic acceleration is associated with performance technologies such as SecureXL, not Autonomous Threat Prevention. The primary advantage is operational simplification with strong protection coverage: it reduces configuration complexity, speeds deployment, and helps keep protections current as threat intelligence changes.

Reference topics: Autonomous Threat Prevention, predefined profiles, automatic configuration updates, Threat Prevention policy.

NEW QUESTION # 172

Which configuration element determines which traffic should be encrypted into a VPN tunnel vs. sent in the clear?

- A. NAT Rules
- B. The Rule Base
- C. The firewall topologies
- **D. The VPN Domains**

Answer: D

Explanation:

The VPN Domains configuration element determines which traffic should be encrypted into a VPN tunnel vs. sent in the clear. The VPN Domain is the set of hosts and networks that are allowed to communicate securely with the gateway. The firewall topologies, NAT rules, and the rule base do not directly affect the VPN encryption decision. Check Point R81 Security Gateway Technical Administration Guide, CCSA/CCSE Exam Tips & Content - R80.X vs. R81.X - Check Point CheckMates

NEW QUESTION # 173

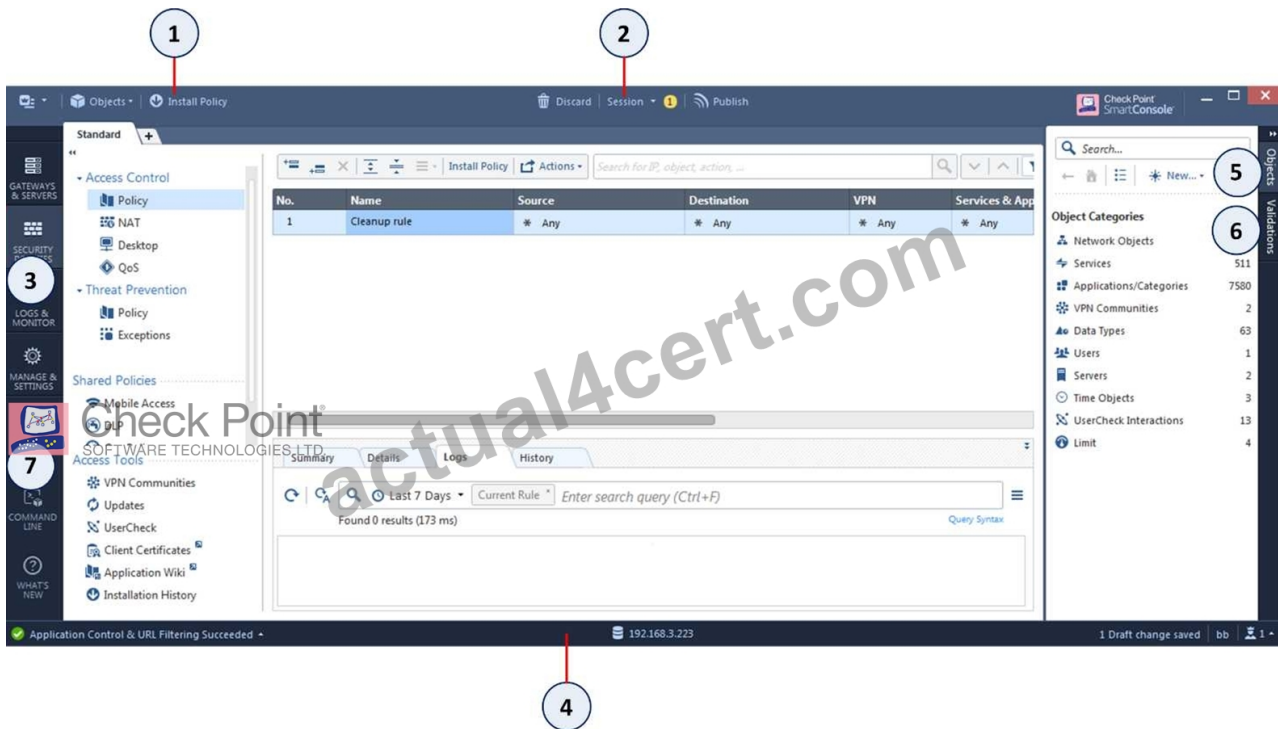

Which of the following is NOT a valid application navigation tab in the R80 SmartConsole?

- **A. Manage and Command Line**
- B. Security Policies
- C. Gateway and Servers
- D. Logs and Monitor

Answer: A

Explanation:

Manage and Command Line is not a valid application navigation tab in the R80 SmartConsole, as it does not exist in the interface. The image shows the navigation toolbar of the R80 SmartConsole, which has four tabs: Security Policies, Logs & Monitor, Gateways & Servers, and Manage & Settings. The Command Line Interface button is located in the system information area, not in the navigation toolbar.

NEW QUESTION # 174

The SmartEvent R80 Web application for real-time event monitoring is called:

- A. SmartEventWeb
- B. SmartView Monitor
- C. SmartView
- D. There is no Web application for SmartEvent

Answer: C

Explanation:

SmartView is the web application for real-time event monitoring in SmartEvent R80 and above. It provides a unified view of security events across the network and allows for quick investigation and response. SmartEvent R80.40 Administration Guide, SmartView

NEW QUESTION # 175

John is using Management HA. Which Smartcenter should be connected to for making changes?

- A. connect virtual IP of Smartcenter HA
- B. secondary Smartcenter
- C. active Smartcenter
- D. primary Smartcenter

Answer: C

Explanation:

The SmartCenter that should be connected to for making changes is the active SmartCenter. The active SmartCenter is the one that is currently synchronizing its configuration with the secondary SmartCenter and handling the communication with the gateways. The primary SmartCenter is the one that was initially configured as the main server, but it may become inactive if a failover occurs. The virtual IP of SmartCenter HA is used to access the SmartConsole, not to make changes.
