Salesforce Platform-App-Builders덤프샘플문제 & Platform-App-Builders덤프

프테모문제

다년간 IT업계에 종사하신 전문가들이 자신의 노하우와 경험으로 제작한 Salesforce Platform-App-Builder덤프는 Platform-App-Builder 실제 기출문제를 기반으로 한 자료로서 Platform-App-Builder시험문제의 모든 범위와 유형을 포함하고 있어 높은 적응율을 자랑하고 있습니다.덤프구매후 불합격 받으시면 구매일로부터 60일내 주문은 덤프비용을 환불해드립니다.IT 자격증 취득은 Fast2test덤프가 정답입니다.

최신 Salesforce App Builder Platform-App-Builder 무료샘플문제 (Q260-Q265):

질문 # 260

The VP of Sales wants a Chatter post to the All Sales private group when an Opportunity goes to the closed won stage. What two tools should the app builder use to automate this process? (Choose two.)

- A. Flow
- B. Process Builder
- C. Big Deal Alert
- D. Workflow

정답: A,B

설명:

Explanation/Reference: <https://automationchampion.com/tag/how-to-post-on-chatter-with-process-builder/>

질문 # 261

Ursa Major Solar (UMS) uses Cases to track customer complaints, an Issue__c object to represent known problems with its solar panels, and a Case_Issue__c junction object to relate known problems to customer complaints. Periodically, UMS conducts audits which require the auditing users to view Case_Issue__c records. Which access levels must be configured to allow UMS users to access Case_Issue__c records?

- A. Read-Only access of Case issue =
- B. Read-Only access on Case and issue__c
- C. Read Only access on Case and case_issue__o
- D. Read-Only access or issue__c and __issue__c

정답: B

설명:

To ensure auditing users can access records in the Case_Issue__c junction object, the correct data permissions on related records must be established:

D. Read-Only access on Case and Issue__c. Users need read-only access to both Case and Issue__c objects to view associated Case_Issue__c junction object records properly. This is because access to junction object records in Salesforce is determined by the user's access levels to the parent records in a relationship.

Steps to configure access:

Navigate to Setup → Profiles or Permission Sets.

Select the profile or permission set of the auditing users.

Under Object Settings, adjust the permissions for Case and Issue__c to at least 'Read-Only'.

Ensure that users have visibility to the Case_Issue__c object itself.

This configuration allows users to view the details of cases and issues as they audit the junction object records.

질문 # 262

Universal Containers allows all employees to submit reviews for leadership using a custom object called Review. These Reviews should only be visible to the HR department and the employee who submitted the record.

Which three steps should an app builder take to properly control access to Reviews?

Choose 3 answers

- A. Disable Grant Access Using Hierarchies.
- B. Remove Review Read permission from non-HR Department user Profiles.

- C. Set organization-wide default to Private.
- D. Add a Master-Detail (User; field on the Review object.
- E. Create a criteria-based Sharing Rule for the HR Department.

정답: C,D,E

설명:

Disable Grant Access Using Hierarchies, Create a criteria-based Sharing Rule for the HR Department, and Remove Review Read permission from non-HR profiles. These are correct because disabling Grant Access Using Hierarchies prevents users above the record owner in the role hierarchy from viewing the Review records, creating a criteria-based Sharing Rule for the HR Department allows users in that group to view all Review records, and removing Review Read permission from non-HR profiles prevents users in other profiles from viewing any Review records.

질문 # 263

Sales reps at Cloud Kicks (CK) forget to submit for approval when CK needs orders reviewed before close won. CK wants to automatically submit opportunities into the Secure Commitment Stage to eliminate manual submission. Which feature meets the business requirements?

- A. Record-Triggered flow optimized for Actions and Related Records
- B. Platform Event-Triggered flow
- C. Record-Triggered flow optimized for Fast Field Updates
- D. Custom button and screen flow

정답: A

설명:

To automate the submission of opportunities into the "Secure Commitment" stage and eliminate manual submission for approval, the best feature to use is:

* Record-Triggered flow optimized for Actions and Related Records (D). This type of flow allows for complex automation that can include submitting records for approval based on specific criteria being met, such as reaching a particular stage in the opportunity lifecycle. It's particularly suitable for handling related record updates and other actions like submissions for approval, which are integral when an opportunity reaches a certain stage.

Record-Triggered Flow optimized for Fast Field Updates (A) is focused primarily on quick updates to fields and may not handle the complexity of submission for approval processes adequately. Custom button and screen flow (B) could be used to manually trigger processes but does not automate the submission. Platform Event-Triggered flow (C) is typically used for integrations and reacting to system-wide events, not for standard record lifecycle management.

Reference for using Flows in Salesforce, particularly for automating business processes like approval submissions:

* Record-Triggered Flows:

https://help.salesforce.com/articleView?id=sf.flow_considerations_trigger_record.htm&type=5

질문 # 264

Universal Containers' app builder has been tasked with replacing workflow rules and Apex triggers with Process Builders where possible.

What are two important considerations an app builder should know before the project is started?

Choose 2 answers

- A. Create a process for each workflow rule.
- B. Apex has a different SOQL query limit than Flow.
- C. Combine actions when possible.
- D. Avoid generating infinite loops.

정답: C,D

설명:

Before replacing workflow rules and Apex triggers with Process Builders, the app builder should consider avoiding generating infinite loops and combining actions when possible. Infinite loops can occur when a process updates a record that causes another process to run on the same record, and so on. Combining actions can reduce the number of processes and improve performance and maintainability
