## Plat-Admn-202 Test Questions Answers | Latest Plat-Admn-202 Exam Camp

In order to serve you better, we have a complete system for Plat-Admn-202 training materials. We offer you free demo to have a try before buying, so that you can have a better understanding of what you are going to buy. After payment, you can obtain the download link and password within ten minutes for Plat-Admn-202 Training Materials. And we have a professional after-service team, they process the professional knowledge for the Plat-Admn-202 exam dumps, and if you have any questions for the Plat-Admn-202 exam dumps, you can contact with us by email, and we will give you reply as soon as possible.

### Salesforce Certified Platform App Builder Sample Questions (Q221-Q226):

#### NEW QUESTION # 221

The app builder at Northern Trail Outfitters created a report type for opportunities with or without shipments. The operations team wants to see the account rating information on the report.

What should the app builder do to fulfill this request?

- A. Add the Account Rating field to the opportunity record page.

- B. Use add fields related via lookup with the view set to opportunities.
- C. Change the primary object of the custom type to the Account object.
- D. Change the account/opportunity relationship to a master/detail relationship.

**Answer: B**

Explanation:

Reference:

Salesforce Help - Custom Report Types

**NEW QUESTION # 222**

The app builder needs to change the data types of new custom fields. The app builder is not able to delete and recreate any of the fields, nor modify any apex code. Which data type change will require the app builder to perform the additional steps in order to retain existing functionalities?

- A. Changing the data type of a field used as an external id from number to text.
- B. Changing the data type of a field used in a report from a text to an encrypted field
- C. Changing the data type of a field used in lead conversion from number to text
- D. **Changing the data type of a field used in an apex class from number to text.**

**Answer: D**

Explanation:

Changing the data type of a field used in an apex class from number to text will require the app builder to perform additional steps in order to retain existing functionalities. This is because changing the data type of a field may affect the apex code that references or manipulates the field value, and may cause compilation errors or unexpected results. The app builder will need to update the apex code to handle the new data type and ensure that the logic and calculations are still correct. Option B is incorrect because changing the data type of a field used in a report from a text to an encrypted field will not require additional steps, as encrypted fields can still be used in reports with some limitations. Option C is incorrect because changing the data type of a field used as an external id from number to text will not require additional steps, as external id fields can be either number or text. Option D is incorrect because changing the data type of a field used in lead conversion from number to text will not require additional steps, as lead conversion fields can be mapped regardless of their data types.

**NEW QUESTION # 223**

Cloud Kicks (CK) wants to set up a custom child object to track gift cards issued to a customer. A key requirement is to track the total number of gift cards opened and gift cards issued on an Account. CK wants to permanently ensure the gift cards are unable to be moved across any other Account once it is created.

On the gift card object, what type of field should be created to support this requirement?

- A. **Master-detail relationship**
- B. Lookup relationship
- C. Roll-up summary
- D. Formula

**Answer: A**

Explanation:

The app builder should create a master-detail relationship field on the gift card object to support the requirement. A master-detail relationship field creates a parent-child relationship between two objects, where the master record controls certain behaviors of the detail record. In this case, the Account object would be the master and the gift card object would be the detail. By creating a master-detail relationship field, the app builder can meet these requirements:

Track the total number of gift cards opened and gift cards issued on an Account: This can be done by creating roll-up summary fields on the Account object that count or sum up the values from the gift card records related to each account.

Permanently ensure the gift cards are unable to be moved across any other Account once it is created: This can be done by making the master-detail relationship field required on the gift card object, which means that every gift card record must be associated with an account record and cannot be changed once set. Option B, C, and D are not types of fields that can support this requirement.

**NEW QUESTION # 224**

At Universal containers, all US Sales reps should be able to view the US Team dashboard, however, only the US sales directors should be able to see the data in the component and view its source report. How can an app builder ensure the proper access is granted?

- A. Share the dashboard with the public group US Sales Reps and share the dashboard source reports folder with the US Sales Director profile
- B. Make the dashboard dynamic and give US Sales Reps the view my teams dashboard permission
- C. Share the dashboard folder with roles and subordinates of the US Sales Director and share the report folder with the role of US Sales Director
- D. Make the US Sales Director the running user and share the dashboard folder with the role US Sales Rep

**Answer: C**

Explanation:

Sharing the dashboard folder with roles and subordinates of the US Sales Director and sharing the report folder with the role of US Sales Director will ensure that only the US sales directors can see the data in the component and view its source report, while all US sales reps can view the US Team dashboard. Making the US Sales Director the running user will show only his or her data in the component, not the whole team's data. Making the dashboard dynamic will show different data depending on who is viewing it, not based on their role. Sharing the dashboard with the public group US Sales Reps and sharing the dashboard source reports folder with the US Sales Director profile will not prevent other profiles from accessing the reports if they have access to the report folder.

## NEW QUESTION # 225

Universal Containers allows all employees to submit reviews for leadership using a custom object called Review. These Reviews should only be visible to the HR department and the employee who submitted the record.

Which three steps should an app builder take to properly control access to Reviews?

Choose 3 answers

- A. Create a criteria-based Sharing Rule for the HR Department.
- B. Set organization-wide default to Private.
- C. Remove Review Read permission from non-HR Department user Profiles.
- D. Disable Grant Access Using Hierarchies.
- E. Add a Master-Detail (User; field on the Review object.

**Answer: A,B,D**

Explanation:

To control access to the Review custom object such that only the HR department and the submitting employee can see the reviews, the following steps should be taken:

A . Disable Grant Access Using Hierarchies:By default, Salesforce allows users higher in the role hierarchy to access records owned by users lower in the hierarchy. Since reviews should only be visible to HR and the submitting employee, you need to disable Grant Access Using Hierarchies on the Review object to prevent anyone else in the hierarchy from automatically gaining access to these records.

Record Access and Role Hierarchies

C . Create a criteria-based Sharing Rule for the HR Department:With the organization-wide default (OWD) set to Private, you'll need to create a criteria-based sharing rule to ensure that HR users can view the Review records. This rule would give HR access to the records based on a specified condition, such as all records of the Review object.

Reference:

E . Set organization-wide default to Private:Setting the organization-wide default (OWD) for the Review object to Private ensures that no user, other than the record owner (the submitting employee) and those explicitly granted access (HR), can see the Review records by default.

Why the other options are incorrect:

Option B: Add a Master-Detail (User) field on the Review object:This is not necessary in this scenario because the primary relationship is about controlling access through sharing rules, not creating a master-detail relationship. Moreover, this would complicate access control, which is better managed via sharing settings.

Option D: Remove Review Read permission from non-HR Department user Profiles:This step is redundant if the organization-wide default is set to Private. Profile permissions control the general ability to access the object, while the visibility of specific records is controlled by sharing rules and OWD. Removing read access via profiles would block all users, including the ones submitting the reviews, from accessing the object.

In summary, by disabling Grant Access Using Hierarchies, setting OWD to Private, and implementing a criteria-based sharing rule for HR, you can ensure that only HR and the submitting employee can view Review records.

## NEW QUESTION # 226

.....

Do you want to get the Plat-Admn-202 learning materials as fast as possible? If you do, we can do this for you. We will give you Plat-Admn-202 exam dumps downloading link and password within ten minutes after buying. If you don't receive the Plat-Admn-202 learning materials, please contact us, and we will solve it for you. Besides, the Plat-Admn-202 Learning Materials is updated according to the exam centre, if we have the updated version, our system will send the latest one to you for one year for free. If you have any other question, just contact us.
