Interactive ZDTA EBook - New ZDTA Test Pass4sure

ZDTA practice exam takers can even access the results of previous attempts which helps them in knowing and overcoming their mistakes before appearing in the ZDTA final test. There are thousands of students that bought Prep4away's ZDTA Practice Exam and got success on their initial tries. We guarantee that if you take our provided Zscaler ZDTA exam dumps you will crack the ZDTA Exam in a single try.

Zscaler ZDTA Exam Syllabus Topics:

Topic	Details

Topic 1	• Zscaler Zero Trust Automation: This part measures Automation Engineers on their ability to utilize Zscaler APIs, including the One API framework, for automating zero trust security functions and integrating with broader enterprise security and orchestration tools.
Topic 2	• Access Control Services: This area assesses Security Operations Specialists on implementing access control mechanisms including cloud app control, URL filtering, file type controls, bandwidth controls, and segmentation. It also covers Microsoft 365 policies, private application access strategies, and firewall configurations to protect enterprise resources.
Topic 3	• Platform Services: This section measures skills of Cloud Infrastructure Engineers and focuses on the suite of Zscaler platform services. Key topics include advanced device posture assessments, TLS inspection mechanics, and the application of policy frameworks governing internet, private access, and digital experience services.
Topic 4	• Risk Management: This domain measures skills of Risk Managers and Security Architects in using Zscaler's comprehensive risk management suite. Candidates are expected to understand risk capabilities, dashboards, asset and financial risk insights, vulnerability management, deception tactics, identity protection, and breach prediction analytics.

Zscaler Digital Transformation Administrator Sample Questions (Q59-Q64):

NEW QUESTION # 59
Which feature does Zscaler Client Connector Z-Tunnel 2.0 enable over Z-Tunnel 1.0?

- A. Inspection of all ports and protocols via Cloud Firewall
- B. Enables multicast traffic
- C. Enables SSL Inspection for Client Connector
- D. Enables Browser Isolation

Answer: A

Explanation:
Z-Tunnel 2.0 upgrades over 1.0 by carrying all ports and protocols through the Cloud Firewall for inspection - rather than being limited to just HTTP/HTTPS - ensuring full visibility and control.

NEW QUESTION # 60
Zscaler Platform Services works upon unencrypted data from encrypted communications due to which of the following?

- A. Antivirus
- B. TLS Inspection
- C. Tenant Restrictions
- D. Web Filtering

Answer: B

Explanation:
Zscaler Platform Services, such as web filtering, advanced threat protection, DLP, and more, operate on decrypted traffic. This decryption is enabled by TLS Inspection, which intercepts SSL/TLS sessions, decrypts the payloads for inspection, and then re#encrypts the traffic before forwarding to the destination.

NEW QUESTION # 61
When the Zscaler Client Connector launches, which portal does it initially interact with to understand the user's domain and identity provider (IdP)?

- A. Zscaler Internet Access (ZIA) Portal
- B. Zscaler Central Authority

- C. Zscaler Private Access (ZPA) Portal
- D. Zscaler Client Connector Portal

Answer: B

Explanation:
When the Zscaler Client Connector launches, it initially interacts with theZscaler Central Authorityportal.
This portal provides the Client Connector with information about the user's domain and the configured identity provider (IdP). This interaction allows the Client Connector to direct the user to the appropriate authentication endpoint and apply the correct access policies.
The study guide emphasizes the role of the Central Authority in managing user domain information and identity provider details for authentication flows.

NEW QUESTION # 62
Which Risk360 key focus area observes a broad range of event, security configurations, and traffic flow attributes?

- A. External Attack Surface
- B. Data Loss
- C. Lateral Propagation
- D. Prevent Compromise

Answer: D

Explanation:
Prevent Compromise analyzes device and network telemetry - including security configurations, event logs, and traffic flows - to gauge how well you're blocking initial intrusion attempts and misconfigurations.

NEW QUESTION # 63
Client Connector forwarding profile determines how we want to forward the traffic to the Zscaler Cloud.
Assuming we have configured tunnels (GRE or IPSEC) from locations, what is the recommended combination for on-trusted and off-trusted options?

- A. None for on-trusted and none for off-trusted
- B. Tunnel v2.0 for on-trusted and tunnel v2.0 for off-trusted
- C. Tunnel v2.0 for on-trusted and none for off-trusted
- D. None for on-trusted and tunnel v2.0 for off-trusted

Answer: C

Explanation:
When tunnels (GRE/IPSec) are already configured from trusted locations (like branch offices), therecommended setting is "Tunnel v2.0" for on-trusted networks and "None" for off-trusted. This ensures that while on a corporate network, the Zscaler Client Connector uses the pre-established tunnels, but falls back to direct or other secure methods (like VPN or ZCC tunnel) when off-trusted. This aligns with Zscaler's best practices for hybrid deployment.
