CompTIA Security+ Certification Exam Sample Questions (Q472-Q477):

NEW QUESTION # 472

A technician wants to improve the situational and environmental awareness of existing users as they transition from remote to in-office work. Which of the following is the best option?

- A. Modify the content of recurring training.
- B. Send out periodic security reminders.
- C. Implement a phishing campaign
- D. Update the content of new hire documentation.

Answer: A

Explanation:
Recurring training is a type of security awareness training that is conducted periodically to refresh and update the knowledge and skills of the users. Recurring training can help improve the situational and environmental awareness of existing users as they transition from remote to in- office work, as it can cover the latest threats, best practices, and policies that are relevant to their work environment. Modifying the content of recurring training can ensure that the users are aware of the current security landscape and the expectations of their roles.

NEW QUESTION # 473

Which of the following would most likely mitigate the impact of an extended power outage on a company's environment?

- A. UPS
- B. SOAR
- C. Hot site
- D. Snapshots

Answer: A

Explanation:
A UPS (Uninterruptible Power Supply) would most likely mitigate the impact of an extended power outage on a company's environment. A UPS provides backup power and ensures that systems continue to run during short-term power outages, giving

enough time to perform an orderly shutdown or switch to a longer-term power solution like a generator.

Hot site: A fully operational offsite data center that can be used if the primary site becomes unavailable. It's more suitable for disaster recovery rather than mitigating short-term power outages.

UPS: Provides immediate backup power, protecting against data loss and hardware damage during power interruptions.

Snapshots: Used for data backup and recovery, not for power outage mitigation.

SOAR (Security Orchestration, Automation, and Response): A platform for automating security operations, not related to power outage mitigation.

NEW QUESTION # 474

Which of the following practices would be best to prevent an insider from introducing malicious code into a company's development process?

- A. Open-source component usage
- B. Quality assurance testing
- C. Code scanning for vulnerabilities
- D. Peer review and approval

Answer: D

Explanation:

Peer review and approval is a practice that involves having other developers or experts review the code before it is deployed or released. Peer review and approval can help detect and prevent malicious code, errors, bugs, vulnerabilities, and poor quality in the development process. Peer review and approval can also enforce coding standards, best practices, and compliance requirements. Peer review and approval can be done manually or with the help of tools, such as code analysis, code review, and code signing.
