

Pass Guaranteed Quiz Reliable Juniper - Reliable JN0-105 Exam Tutorial

BTW, DOWNLOAD part of Exam4Free JN0-105 dumps from Cloud Storage: <https://drive.google.com/open?id=1mXKbCeH6BUqXonyQRYjinhwBb2rI2EdJ>

Because the effect is outstanding, the JN0-105 study materials are good-sale, every day there are a large number of users to browse our website to provide the JN0-105 study guide materials, through the screening they buy material meets the needs of their research. Every user cherishes the precious time, seize this rare opportunity, they redouble their efforts to learn our JN0-105 Exam Questions, when others are struggling, why do you have any reason to relax? So, quicken your pace, follow the JN0-105 test materials, begin to act, and keep moving forward for your dreams!

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.
Topic 2	<ul style="list-style-type: none">Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.
Topic 3	<ul style="list-style-type: none">Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.

Hot Reliable JN0-105 Exam Tutorial | Well-Prepared JN0-105 New Soft Simulations: Junos, Associate (JNCIA-Junos)

We keep a close watch at the change of the popular trend among the industry and the latest social views so as to keep pace with the times and provide the clients with the newest study materials resources. Our service philosophy and tenet is that clients are our gods and the clients' satisfaction with our JN0-105 Study Materials is the biggest resource of our happiness. So why you still hesitated? Go and buy our JN0-105 study materials now.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q28-Q33):

NEW QUESTION # 28

What are two advantages of using the Junos OS? (Choose two.)

- A. It supports up to a maximum of two previous configurations.
- **B. It enables you to roll back to a previous configuration.**
- C. It is modular.
- D. It pushes your configuration changes "live" immediately.

Answer: B,C

Explanation:

One of the key advantages of Junos OS is its ability to roll back to previous configurations. This feature allows administrators to revert to an earlier configuration state, which is invaluable for quickly recovering from configuration errors or undesired changes. Junos OS maintains an archive of previous configurations, enabling easy rollback to any saved state. Another significant advantage of Junos OS is its modular design.

The operating system is structured so that different processes and services run in separate protected memory spaces, enhancing the stability and reliability of the system. If one process fails, it does not affect the others, thereby minimizing the risk of system-wide failures.

NEW QUESTION # 29

Exhibit

```
term limit-icmp { from {
source-address {
172.25.11.0/24;
}
}
protocol icmp;
}
then {
count count-icmp; discard;
}
}
```

Referring to the exhibit, which two actions will occur when a packet matches the firewall filter? (Choose two.)

- A. An ICMP destination unreachable message will be returned.
- B. A counter will be incremented.
- C. The packet will be forwarded.
- **D. The packet will be discarded.**

Answer: D

Explanation:

Referring to the firewall filter configuration in the exhibit, when a packet matches the specified term `limit-icmp`, two actions are defined in the `then` statement: `count count-icmp` and `discard`. The `count count-icmp` action means that each time a packet matches this term, a counter named `count-icmp` will be incremented, providing a tally of how many packets have matched the term.

The `discard` action means that the packet will be dropped and not forwarded through the device. This effectively prevents the packet from reaching its intended destination. There is no action specified that would cause an ICMP destination unreachable message to be returned, nor is there any action that would allow the packet to be forwarded.

NEW QUESTION # 30

Click the Exhibit button.

How is traffic, sourced from 10.0.0.0/8, treated by the firewall filter shown in the exhibit?

- A. logged and discarded
- **B. logged and accepted**
- C. logged with no further action
- D. logged and rejected

Answer: B

Explanation:

The firewall filter configuration in the exhibit specifies a filter with two terms. Term 1 matches traffic from the source address 10.0.0.0/8 and has two actions: 'log' and 'next term'. The 'log' action will record the match to a log file, and 'next term' indicates that

the firewall should evaluate the next term after logging. There is no explicit action such as 'accept' or 'reject' in term 1, so by default, the traffic will be accepted unless subsequently rejected by another term.

Term 2 has the action 'reject', which discards packets that reach this term. Since there is no 'from' condition in term 2, it acts as a default rule for all traffic not matched by term 1.

Because the traffic sourced from 10.0.0.0/8 matches term 1 and there is no reject action in that term, it will be logged and then accepted by the firewall filter. There is no subsequent term that rejects this specific traffic, so the action from term 2 does not apply to it.

NEW QUESTION # 31

Which protocol would you configure to synchronize the time and date on a Junos device?

- A. NMP
- **B. NTP**
- C. SNMP
- D. RIP

Answer: B

Explanation:

The Network Time Protocol (NTP) is designed to synchronize the clocks of computers over a network.

Configuring NTP on a Junos device ensures that its clock is set accurately, which is crucial for logging, troubleshooting, and maintaining the integrity of time-sensitive operations and security protocols. NTP allows devices to use a hierarchy of time sources, from primary servers synchronized to a reference clock (such as an atomic clock or GPS time) to secondary servers that distribute the time to other devices on the network.

NEW QUESTION # 32

When considering routing tables and forwarding tables, which two statements are correct? (Choose two.)

- A. The forwarding table stores all routes and prefixes from all protocols.
- **B. The routing table stores all routes and prefixes from all protocols.**
- **C. The routing table is used by the RE to select the best route.**
- D. The forwarding table is used by the RE to select the best route.

Answer: B,C

Explanation:

The routing table and forwarding table play distinct roles in a Junos OS device. The correct answers are A and

D: The routing table (A) is used by the Routing Engine (RE) to select the best route among all the learned routes, while the routing table (D) stores all routes and prefixes learned from all routing protocols. The forwarding table, in contrast, contains only the active routes chosen by the RE and is used by the Packet Forwarding Engine for actual packet forwarding.

NEW QUESTION # 33
