Your confidence will also be set up through the practicing of Cloud-Digital-Leader Questions and answers, a good mental state will help you to exert the ability you should have.

Google Cloud Digital Leader Sample Questions (Q105-Q110):

NEW QUESTION # 105

Your company has multiple internal applications used by your employees. You also have to give access to certain vendors and contractors. What is a good option for you to adopt?

- A. Use an IDaaS (Identity as a Service) product that can centrally manage authentication and authorization for the applications.
- B. Use an external identity provider that is famous and popular like Facebook or Twitter; that way, even your vendors and contractors will have an account there.
- C. Allow all users, especially contractors and vendors, to bring their own identities, like those at gmail.com.
- D. Keep the credentials separate for each application to reduce the blast radius in case of any issues.

Answer: A

Explanation:

Explanation

IDaaS - identity providers managed by the company give better control over security and privacy.

Security/access can be set granularly, while also being centralized. You don't have to manage multiple credentials.

NEW QUESTION # 106

Each of the three cloud service models - infrastructure as a service (IaaS), platform as a service (PaaS), and software as a service (SaaS) - offers benefits between flexibility and levels of management by the cloud provider and the customer.

Why would SaaS be the right choice of service model?

- A. You want a balance between flexibility for the customer and the level of management by the cloud provider
- **B. You want to minimize the level of management by the customer**
- C. You want to maximize flexibility for the customer.
- D. You want to be able to shift your emphasis between flexibility and management by the cloud provider as business needs change

Answer: B

Explanation:

Benefits of SaaS

The main benefit of SaaS is that it offloads all infrastructure and application management to the SaaS vendor.

NEW QUESTION # 107

The Border Security Agency has hired your software services firm to build an application for them that will collect information about visas stamped on passports. You are given stamped images. You have to find out which country issued the visa and the period of validity. Pull out this data and put it into a database. Which of these applications would be suitable for that?

- **A. Use Cloud Vision API - write code to identify the text blocks, copy the data, and store it**
- B. Use TensorFlow - write code that will identify the type of visa and the bounding text blocks. Copy the data and then store it.
- C. Use Data Labeling service - outsource the work of marking and extracting the information to others.
- D. Use AutoML - upload other images of visas and run the model creation process which will automatically identify the visas

Answer: A

Explanation:

Explanation

Cloud Vision API allows you to programmatically identify images, text, etc. in the document. This would be the best option.

NEW QUESTION # 108

Your organization needs to establish private network connectivity between its on-premises network and its workloads running in Google Cloud. You need to be able to set up the connection as soon as possible.

Which Google Cloud product or feature should you use?

- A. Cloud VPN
- **B. Cloud Interconnect**
- C. Direct Peering
- D. Cloud CDN

Answer: B

Explanation:

Private Google Access for on-premises hosts provides a way for on-premises systems to connect to Google APIs and services by routing traffic through a Cloud VPN tunnel.
