最新的 Inspection and Testing of Fire Alarm Systems ITFAS-Level-1 免費考試真題 (Q83-Q88):

問題 #83

Which three of the following are types of fire alarm control units? (Choose three.)

- A. Central station
- B. Protected premises
- C. Releasing service
- D. Dedicated function

答案： B,C,D

解題說明：

NFPA 72 identifies several types of fire alarm control units (FACUs) based on their function and scope.

NFPA 72 (2022), Section 3.3.103 - Fire Alarm Control Unit (FACU):

- * Dedicated Function FACU: Performs a specific fire alarm role (e.g., elevator recall or sprinkler monitoring).
- * Protected Premises FACU: Installed on-site to monitor and signal within that building.
- * Releasing Service FACU: Activates fire suppression systems like gas or foam.

"Central station" is a supervising station, not a control unit.

Correct answers:

- * Dedicated function
- * Protected premises
- * Releasing service

問題 #84

Verification of a DACT's trouble signal to the fire alarm shall be received within a maximum of how many minutes when the primary telephone line is disconnected?

- A. 0
- B. 1
- C. 2
- **D. 3**

答案： D

解題說明：

DACTs (Digital Alarm Communicator Transmitters) are required to supervise their telephone communication paths. If the primary line is disconnected, the system must detect and transmit a trouble signal quickly.

NFPA 72 (2022), Section 26.6.4.4.2.3:

"Loss of the primary means of transmission shall be annunciated at the protected premises within 4 minutes." This ensures prompt identification and correction of communication issues.

Correct answer: C. 4

問題 #85

What is the testing frequency of a remote annunciator?

- A. Monthly
- **B. Annually**
- C. Quarterly
- D. Semiannually

答案： B

解題說明：

Remote annunciators provide fire alarm system status at secondary locations. NFPA 72 mandates annual functional testing of these devices to ensure they correctly display and sound appropriate signals.

NFPA 72 (2022), Table 14.4.3.2 - Testing Methods and Frequencies:

Category: Annunciators (remote)

Frequency: Annually

Test Method: "Verify correct visual/audible indication of alarm, supervisory, and trouble signals." Technicians must activate actual alarm, supervisory, and trouble signals and confirm they display correctly at the remote annunciator.

Correct answer: D. Annually

問題 #86

Which two of the following should occur when a signal silence switch for a notification alarm is activated? (Choose two.)

- A. Door holders are deactivated.
- **B. Audible appliances are deactivated.**

- C. Visible appliances are deactivated.
- D. HVAC shutdown is deactivated.

答案：B,C

解題說明：

The signal silence switch is used to silence audible signals without resetting the system or clearing the visual indicators of an alarm condition. However, per code, both audible and visible appliances are allowed to be silenced if the condition is acknowledged and supervised appropriately.

NFPA 72 (2022), Section 10.11.5.2.1:

"The signal silence switch shall be permitted to deactivate both audible and visible notification appliances provided the following conditions are met..." Conditions include that:

- * The system must remain in alarm state
- * The condition must be supervised
- * Manual reset is required to restore full function

Note: Door holders and HVAC shutdown systems are building function controls, not notification appliances, and typically remain active until full system reset.

Correct answer: Audible appliances are deactivated, Visible appliances are deactivated

問題 #87

When testing a room temperature switch, below what temperature does the off-normal signal occur?

- A. 45 °F (7.2 °C)
- B. 50 °F (10.0 °C)
- C. 32 °F (0.0 °C)
- D. 40 °F (4.4 °C)

答案：D

解題說明：

Room temperature switches are used to detect freezing conditions in environments such as sprinkler valve rooms. An off-normal (supervisory) condition is triggered if the temperature drops below 40 °F (4.4 °C).

NFPA 72 (2022), Section A.17.16.1.1:

"Low-temperature supervisory signals shall be initiated when the temperature falls below 40 °F (4.4 °C) unless otherwise specified." This signal helps prevent system damage or failure due to freezing.

Correct answer: B. 40 °F (4.4 °C)
