UiPath-ADPv1 Valid Exam Cram - New UiPath-ADPv1 Exam Question

With the help of our UiPath-ADPv1 study guide, you can adjust yourself to the exam speed and stay alert according to the time-keeper that we set on our UiPath-ADPv1 training materials. Therefore, you can trust on our UiPath-ADPv1 exam materials for this effective simulation function will eventually improve your efficiency and assist you to succeed in the UiPath-ADPv1 Exam. And we believe you will pass the UiPath-ADPv1 exam just like the other people!

UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.
Topic 2	• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.

Topic 3	• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.
Topic 4	• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.

New UiPath-ADPv1 Exam Question & UiPath-ADPv1 Valid Torrent

Customer first, service first is our principle of service. If you buy our UiPath-ADPv1 study guide, you will find our after sale service is so considerate for you. We are glad to meet your all demands and answer your all question about our UiPath-ADPv1 Training Materials. So do not hesitate and buy our UiPath-ADPv1 study guide, we believe you will find surprise from our products. you should have the right to enjoy the perfect after sale service and the high quality products!

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q70-Q75):

NEW QUESTION # 70
In UiPath Studio, how can a specific amount of time be subtracted from the current date using DateTime and TimeSpan variables in the VB.NET?

- A. Assign the subtraction result to a DateTime variable with the following syntax Today.Subtract(Span).
- B. Use the Add method on the DateTime variable and pass a negative TimeSpan value.
- C. Multiply the TimeSpan variable by -1 and then add it to the DateTime variable.
- D. Call Now.Subtract(Span) directly, without using a DateTime variable.

Answer: B

Explanation:
In UiPath Studio, you can use DateTime and TimeSpan variables to store and manipulate date and time values. A DateTime variable represents a specific point in time, such as the current date and time, or a date in the past or future. A TimeSpan variable represents a time interval, such as one hour, two days, or three weeks.
To subtract a specific amount of time from the current date using DateTime and TimeSpan variables in VB.
NET, you can use the Add method on the DateTime variable and pass a negative TimeSpan value. For example, if you have a DateTime variable called Today that stores the current date and time, and a TimeSpan variable called Span that stores the time interval you want to subtract, you can write:
Today.Add(-Span)
This expression returns a new DateTime value that is the result of subtracting the Span value from the Today value. For example, if Today is 2024-02-08 10:51:49 and Span is 1.02:10:04, then the expression returns
2024-02-07 08:41:45.
The other options are not correct ways of subtracting a TimeSpan value from a DateTime value in VB.NET.
Option A is invalid, because you cannot multiply a TimeSpan value by a number. Option B is incorrect, because the Subtract method on the DateTime variable returns a TimeSpan value, not a DateTime value.
Option D is incorrect, because the Now property is not a method, and it cannot take a TimeSpan value as an argument.

NEW QUESTION # 71
Considering a process developed using REFramework, if the status of a transaction was set to "Failed" with the ErrorType specified as "Business", the process will transition to which state?

- A. End Process
- B. Get Transaction Data
- C. Process Transaction

- D. Initialization

Answer: B

Explanation:
The REFramework is a project template based on State Machines, which follows the best practices regarding logging, exception handling, application initialization, and others1. The REFramework uses a queue in Orchestrator to store the transaction items, which are the units of data that need to be processed by the automation process1. The status of a transaction item can be set to Failed or Successful using the Set Transaction Status activity, which also allows specifying the ErrorType as Business or Application2. A Business ErrorType indicates that the transaction failed due to a business rule exception, such as invalid or incomplete data2. An Application ErrorType indicates that the transaction failed due to an application exception, such as a system error or a timeout2. The REFramework has four main states: Init, Get Transaction Data, Process Transaction, and End Process1.
The process transitions between these states based on the conditions and triggers defined in the state machine1. The process starts with the Init state, where the application is initialized and the Config file is read1. Then, the process moves to the Get Transaction Data state, where the next transaction item is retrieved from the queue1. If there is a transaction item available, the process moves to the Process Transaction state, where the main logic of the automation is executed1. If the transaction is processed successfully, the status is set to Successful and the process returns to the Get Transaction Data state1. If the transaction fails due to a Business ErrorType, the status is set to Failed and the process also returns to the Get Transaction Data state, without retrying the transaction1. If the transaction fails due to an Application ErrorType, the status is set to Failed and the process retries the transaction until the maximum number of retries is reached1. If there is no transaction item available, or if the maximum number of retries is reached, or if a System Error occurs, the process moves to the End Process state, where the application is closed and the final report is generated1.
Therefore, considering a process developed using REFramework, if the status of a transaction was set to "Failed" with the ErrorType specified as "Business", the process will transition to the Get Transaction Data state, where it will fetch the next transaction item from the queue.

NEW QUESTION # 72
A developer is building a process that needs to click an element which requires a mouse hover to become visible. However, the element does not appear with the default click setting. The input method for the Click activity is Send Window Message.
Which property should the developer configure to be able to click the element?

- A. The property AlterIfDisabled should be set to False.
- B. The property AlterIfDisabled should be set to True.
- C. The developer should change the input method to Hardware Events and the CursorMotionType to Smooth.
- D. The developer should change the input method to Simulate and the CursorMotionType to Instant.

Answer: C

NEW QUESTION # 73
A developer needs to design a process using the REFramework. but without Orchestrator Queues. Which Is the correct order of actions the developer needs to do in the Get Transaction Data state in this case?

- A. 1. Remove the Get Transaction Item activity from GetTransactionData workflow.2. Add a Read Row activity in GetTransactionData workflow to read the data from a local Excel file.3. Add the logic required to read the data source only one time.4. Add the logic required to check if all rows/transaction items from the read data have been processed
- B. 1. Remove the Get Transaction Item activity from GetTransactionData workflow2. Add a Read Range activity in GetTransactionData workflow to read the data from a local Excel file.3. Add the logic required to read the data source only one time.4. Add the logic required to retrieve only one row from read data each time.
- C. 1. Remove the Get Transaction Item activity from GetTransactionData workflow.2. Add a Read Range activity in GetTransactionData workflow to read the data from a local Excel file.3. Add the logic required to read the data source only one time.4 Add the logic required to retrieve only one row from read data each time5. Add the logic required to check if all rows/transaction items from the read data have been processed.
- D. 1. Remove the Get Transaction Item activity from GetTransactionData workflow.2. Add a Read Row activity in GetTransactionData workflow to read the data from a local Excel file.3. Add the logic required to read the data source only one time.4. Add the logic required to retrieve only one row from read data each time.5. Add the logic required to check if all rows/transaction items from the read data have been processed.

Answer: C

NEW QUESTION # 74

A developer plans to create a process to automate a web application using the Firefox browser. The goal Is to have the robot work with the web application without relying on visual elements on screen.

To achieve this goal, what option should the developer use for the Use Application/Browser activity?

- A. User Data Folder Mode = CustomFolder
- B. Input mode = Chromium API
- C. Input mode = Simulate
- D. WebDriver mode = Headless

Answer: C

Explanation:

To work with a web application in Firefox without relying on visual elements, the developer should use the
'Input mode = Chromium API'. This option enables the robot to interact with the web elements directly, without the need for visual screen elements.

NEW QUESTION # 75

......

The passing rate of our UiPath-ADPv1 test torrent is high but if you fail in the exam we will refund you in full immediately. Some people may worry that the refund procedure is complicate but we guarantee to the client that the refund procedure is very simple. If only you provide the screenshot or the scanning copy of UiPath-ADPv1 Exam failure marks list we will refund you immediately and the process is really simple. It is very worthy for you to buy our UiPath-ADPv1 guide questions and we can help you pass the exam successfully.
