Fortinet FCP_FGT_AD-7.6 Exam Syllabus Topics:

| Topic | Details |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1 | <ul style="list-style-type: none"> Deployment and system configuration: This section of the exam measures the skills of network security engineers and covers essential tasks for setting up a FortiGate device in a production environment. Candidates are expected to perform the initial configuration, establish basic connectivity, and integrate the device within the Fortinet Security Fabric. They must also be able to configure a FortiGate Cluster Protocol (FGCP) high availability setup and troubleshoot resource and connectivity issues to ensure system readiness and network uptime. |
| Topic 2 | <ul style="list-style-type: none"> VPN: This section of the exam measures the skills of network security engineers and covers the configuration and deployment of Virtual Private Network (VPN) solutions. Candidates are required to implement SSL VPNs to grant secure remote access to internal resources and configure IPsec VPNs in either meshed or partially redundant topologies to ensure encrypted communication between distributed network locations. |
| Topic 3 | <ul style="list-style-type: none"> Firewall policies and authentication: This section of the exam measures the skills of firewall administrators and covers the implementation and management of security policies. It involves configuring basic and advanced firewall rules, applying Source NAT (SNAT) and Destination NAT (DNAT) options, and enforcing various firewall authentication methods. The section also includes deploying and configuring Fortinet Single Sign-On (FSSO) to streamline user access across the network. |
| Topic 4 | <ul style="list-style-type: none"> Routing: This section of the exam measures the skills of firewall administrators and covers the configuration of routing features on FortiGate devices. It includes defining and applying static routes for directing traffic within and outside the network, as well as setting up Software-Defined WAN (SD-WAN) to distribute and balance traffic loads across multiple WAN connections efficiently. |

Fortinet FCP - FortiGate 7.6 Administrator Sample Questions (Q10-Q15):

NEW QUESTION # 10

Which two statements are correct when FortiGate enters conserve mode? (Choose two.)

- A. FortiGate halts complete system operation and requires a reboot to regain available resources.
- B. FortiGate refuses to accept configuration changes.
- C. FortiGate continues to run critical security actions, such as quarantine.
- D. FortiGate continues to transmit packets without IPS inspection when the fail-open global setting in IPS is enabled.

Answer: B,D

Explanation:

In conserve mode, FortiGate restricts configuration changes to preserve system stability.

When IPS fail-open is enabled, FortiGate continues forwarding traffic without IPS inspection during resource constraints (conserve mode).

NEW QUESTION # 11

Refer to the exhibit.

The screenshot shows the 'Add Signatures' configuration window in FortiGate. The 'Filter' is set to 'Signature'. The 'Action' is 'Block'. 'Packet logging' is 'Enable'. 'Status' is 'Enable'. 'Rate-based settings' are 'Default'. 'Exempt IPs' are '0'. A table below shows the signature details:

| Name | Severity | Target | OS | Action |
|------------------|----------|--------|-----|--------|
| IPS Signature | | | | |
| FTP.Login.Failed | 1 | Server | All | Pass |

Review the intrusion prevention system (IPS) profile signature settings shown in the exhibit.

What do you conclude when adding the FTP.Login.Failed signature to the IPS sensor profile?

- A. Traffic matching the signature will be silently dropped and logged.
- B. The signature setting uses a custom rating threshold.
- C. The signature setting includes a group of other signatures.
- **D. Traffic matching the signature will be allowed and logged.**

Answer: D

Explanation:

In the exhibit, the FTP.Login.Failed IPS signature has the Action set to Pass and Packet Logging enabled. The traffic matching this signature will not be blocked; instead, it will be allowed (passed) through the FortiGate. Because packet logging is enabled, the matching events will be logged for monitoring or analysis.

NEW QUESTION # 12

What is the primary FortiGate election process when the HA override setting is enabled?

- A. Connected monitored ports > HA uptime > Priority > FortiGate serial number
- B. Connected monitored ports > Priority > System uptime > FortiGate serial number
- C. Connected monitored ports > System uptime > Priority > FortiGate serial number
- **D. Connected monitored ports > Priority > HA uptime > FortiGate serial number**

Answer: D

Explanation:

If Override DISABLED then: ports > HA Uptime > Priority > SN.
If Overrid ENABLED then: ports > Priority > HA Uptime > SN.

NEW QUESTION # 13

Refer to the exhibit.

FortiGate web filter profile configuration

The exhibit shows the FortiGuard Category Based Filter section of a corporate web filter profile.

An administrator must block access to download.com, which belongs to the Freeware and Software Downloads category. The administrator must also allow other websites in the same category.

What are two solutions for satisfying the requirement? (Choose two.)

- A. Configure a static URL filter entry for download.com with Type and Action set to Wildcard and Block, respectively.
- B. Configure a web override rating for download.com and select Malicious Websites as the subcategory.
- C. Set the Freeware and Software Downloads category Action to Warning.
- D. Configure a separate firewall policy with action Deny and an FQDN address object for *.download.com as destination address.

Answer: A,D

Explanation:

Creating a static URL filter to block download.com specifically allows blocking that site without affecting the entire category. Using a separate firewall policy with a Deny action for an FQDN address object matching download.com can also block the site while allowing others in the same category.

NEW QUESTION # 14

Which method allows management access to the FortiGate CLI without network connectivity?

- A. CLI console widget
- B. SSH console
- C. Serial console
- D. Telnet console

Answer: C

Explanation:

The serial console provides direct physical access to the FortiGate CLI without requiring any network connectivity. It connects via the FortiGate's console port using a serial cable, allowing administrators to perform initial configuration, recovery, or troubleshooting even if the network interfaces are down or misconfigured.
