2026 Salesforce Arch-303: Salesforce Certified B2C Commerce Architect – Efficient Latest Braindumps Questions

If you prefer to practice Arch-303 study guide on paper, Arch-303 PDF version will be your best choice. And you can also take some notes on them. Arch-303 PDF version is printable, and you can print them into hard one and take them with you, and you can study them anywhere and anyplace. In addition, Arch-303 Exam Materials offer you free demo to have a try, so that you can have a deeper understanding of what you are going to learn. You can receive the download link and password within ten minutes for Arch-303 exam braindumps, therefore you can start your learning immediately.

Salesforce Certified B2C Commerce Architect Sample Questions (Q57-Q62):

NEW QUESTION # 57

A client receives multiple feeds from third parties on the same SFTP location:

* Product prices (sftp: prod/prices)

- * Stores information (sftp: prod/stores;
- * Product information (sftp: prod/catalog)
- * Categories information (sftp: prod/marketing)
- * Content (sftp: prod/marketing)

Some of the feeds are placed on sftp multiple times a day, as the information is updated in the source system.

The Architect decides to have only two jobs:

- * One that checks and downloads available feeds every hour
- * One that imports the files from Webdav once a day before the data replication, using the standards steps available in the Job Framework Which design is correct for the import Job, taking the steps scope in consideration?

- A. - four sibling flows execute steps in parallel: import products, stores, prices, content- last flow executes steps in sequence import categories, reindex
- B. - three sibling flows Import steps In parallel: import products, stores, prices- fourth flow executes: import categories- last flow executes steps in sequence: reindex, Import content
- C. - four sibling flows execute steps in parallel: import products, stores, prices, content- fifth flow executes: import categories- last flow executes steps In sequence: reindex
- D. -Four sibling flows execute steps in parallel: import products, stores, price, content-last flow executes steps in sequence: import:categories, reindex

Answer: A

Explanation:

This design maximizes efficiency and concurrency. By having the jobs that import products, stores, prices, and content run in parallel, the system can handle multiple data streams simultaneously, reducing total processing time. The sequential execution of importing categories followed by reindexing ensures that all new and updated information is properly indexed and available for site use, following the completion of the import of more frequently updated data. This order respects dependencies between steps and aligns with best practices for handling complex data workflows in B2C Commerce environments.

NEW QUESTION # 58

The Client wishes to implement a third party integration that allows for free shipping If the customer Is a member of the third party service. When the customer's order is exported to the Order Management System (OMS) it also creates a custom object in order to track additional data before sending that order data to the third-party service as well.

What technical concern should the Architect raise to protect performance and stability of the site?

- A. The OMS having order data sent to a third party and related security needs.
- B. The customer order quota and related retention or deletion needs.
- C. The customer's order data sent to a third-party and related security needs.
- D. The custom object quota and related retention or deletion needs.

Answer: D

Explanation:

When integrating a third-party service that relies on custom objects in B2C Commerce, the primary technical concern is the impact on performance and site stability related to the usage of these objects. Important considerations include:

- * Custom object quota: Ensuring that the use of custom objects does not exceed platform limits, which could impact performance or even prevent new data from being stored.
- * Retention or deletion needs: Proper management of custom object lifecycle is crucial to prevent data bloat and maintain database performance, including strategies for timely deletion or archiving of old data.

Addressing these concerns is critical to maintaining the performance and stability of the site while integrating third-party services that require extensive data handling.

NEW QUESTION # 59

The client provided these business requirements:

- * The B2C Commerce platform will integrate with the client's Order Management System (OMS).
- * The OMS supports Integration using legacy RPC style SOAP services.
- * The OMS is hosted on client's infrastructure.

What is the right cartridge folder to place the WSDL provided for the OMS service?

- A. /cartridge/webreferences2

- B. /cartridge
- C. /cartridge/services
- D. /cartridge/webreferences

Answer: D

Explanation:

In Salesforce Commerce Cloud, the standard practice for organizing WSDL files for SOAP services is to place them in the /cartridge/webreferences directory. This folder is specifically designed for storing web service definitions (WSDLs), ensuring they are managed in a structured manner within the cartridge. This organization aids in maintaining clean architecture and simplifies access to these service definitions for development and maintenance purposes.

NEW QUESTION # 60

During implementation, the team found that there is a notification controller exposed for an external service that marks the order as paid when notification is received. The notification URL is sent to the service together with the payment request and contains only the URL with orderId as the parameter.

What should the Architect recommend to the team in order to prevent the unauthorized usage of the controller to mark the orders as paid?

- A. Add a session attribute and validate it on the callback.
- B. Add an order token in the callback URL and match the token against the one stored on the order.
- C. Add HTTPS restriction to the controller start node.
- D. Add a customer number in the callback URL and match the customer number against the one stored on the order.

Answer: B

Explanation:

To enhance the security of the notification controller exposed for marking orders as paid, the recommended approach is to add an order-specific token to the callback URL (Answer C). This token should be verified against a stored value on the order to ensure the authenticity and integrity of the payment notification. This method prevents unauthorized use of the controller, as only callbacks containing the correct, order-specific token would be allowed to mark orders as paid. This strategy is essential in maintaining secure and reliable transaction processes within Salesforce B2C Commerce.

NEW QUESTION # 61

The Client is Crowing and decided to migrate its ecommerce website to B2C Commerce. The Client provided the Architect with the metrics for its existing website over the past 12 months and forecasted into the next year:

□ Noting these historical metrics and the forecasted growth of 300%, which load test targets meet best practices for testing the new B2C Commerce site?

- A. 15000 visits per hour, 300000 page views per hour, and 3750 orders per hour
- B. 150000 visits per hour, 3000000 page views per hour, and 37500 orders per hour
- C. 3000 visits per hour, 60000 page views per hour, and 750 orders per hour
- D. 1500 visits per hour, 30000 page views per hour, and 375 orders per hour

Answer: A

Explanation:

Considering the existing metrics and forecasted 300% growth, the appropriate load testing targets for the new B2C Commerce site would be:

* 15000 visits per hour: This figure is calculated by applying the expected growth to the peak visits per hour (1000 visits), resulting in 4000 visits. The choice of 15000 provides a higher buffer to accommodate unforeseen spikes in traffic.

* 300000 page views per hour: Similarly, this is scaled up from the peak page views per hour (20000) considering the growth, ensuring the site can handle high demand and interactions.

* 3750 orders per hour: This target is based on the peak orders per hour (250) with the growth applied, allowing testing of the system's ability to handle transactions under significant load.

These targets ensure that the system is robust enough to handle increased traffic and transactions without performance degradation, crucial for maintaining customer satisfaction and operational stability.

NEW QUESTION # 62

.....

To meet the different and specific versions of consumers, and find the greatest solution to help you review, we made three versions for you. Three versions of Salesforce Certified B2C Commerce Architect prepare torrents available on our test platform, including PDF version, PC version and APP online version. The trait of the software version is very practical. It can simulate real test environment, you can feel the atmosphere of the Salesforce Certified B2C Commerce Architect exam in advance by the software version, and install the software version several times. PDF version of Arch-303 Exam torrents is convenient to read and remember, it also can be printed into papers so that you are able to write some notes or highlight the emphasis. PC version of our Arch-303 test braindumps only supports windows users and it is also one of our popular types to choose.
