

# VMware 2V0-16.25 Valid Test Test | Valid 2V0-16.25 Test Papers

Most people define 2V0-16.25 study tool as regular books and imagine that the more you buy, the higher your grade may be. It is true this kind of view make sense to some extent. However, our 2V0-16.25 real questions are high efficient priced with reasonable amount, acceptable to exam candidates around the world. Our 2V0-16.25 practice materials comprise of a number of academic questions for your practice, which are interlinked and helpful for your exam. Just hold the supposition that you may fail the exam even by the help of our 2V0-16.25 Study Tool, we can give full refund back or switch other versions for you to relieve you of any kind of losses. What is more, we offer supplementary content like updates for one year after your purchase.

## VMware 2V0-16.25 Exam Syllabus Topics:

| Topic   | Details  |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"><li>Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.</li></ul> |
|         |  |

|         |   |
|---------|---|
| Topic 2 | <ul style="list-style-type: none"> <li>VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.</li> </ul>   |
| Topic 3 | <ul style="list-style-type: none"> <li>Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.</li> </ul> |
| Topic 4 | <ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.</li> </ul>   |
| Topic 5 | <ul style="list-style-type: none"> <li>Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.</li> </ul>  |

## Avail Useful 2V0-16.25 Valid Test Test to Pass 2V0-16.25 on the First Attempt

With the efforts of our IT professional experts, Exams-boost 2V0-16.25 new practice questions pdf can guarantee you 99.9% first time pass rate. The 2V0-16.25 questions & answers are verified and checked by our experienced IT experts. With the 2V0-16.25 Latest Exam Simulator, you can attend your exam with relax and pleasure mood. Thus, the 2V0-16.25 valid and latest dumps together with positive attitude will contribute to your VMware 2V0-16.25 actual test.

## VMware vSphere Foundation 9.0 Administrator Sample Questions (Q61-Q66):

### NEW QUESTION # 61

The security team requests the ability to log into VMware vCenter and review datacenter, cluster and network configurations. The following details are provided:

- \* The security team is not authorized to make any changes to the environment.
- \* Each user must login with unique credentials.

What steps should the administrator perform to grant access to the security team?

- A. Create a group for the security team, add the users to the group, and assign the group the Network Administrator role.
- B. Create a security user, assign the user the Read-Only role, share the credentials with the security team.
- C. Share the password for 'administrator@vsphere.local' with the security team.
- **D. Create a group for the security team, add the users to the group, and assign the group the Read-Only role.**

**Answer: D**

Explanation:

The security team requires visibility into vCenter configurations but must not make changes.

\* Best practice is to create an Active Directory or vCenter group, add the security users, and assign them the Read-Only role at the datacenter/cluster/network level.

\* This ensures each user logs in with unique credentials, maintaining accountability.

Why others are incorrect:

\* A. Share administrator@vsphere.local password# Violates security best practices.

\* B. Create a single user and share credentials# Still insecure, lacks unique audit trails.

\* C. Assign Network Administrator role# Grants configuration permissions, not allowed.

VMware vSphere 9.0 Documentation - Roles and Permissions Best Practices

VMware Docs: vCenter Server Role-Based Access Control

## NEW QUESTION # 62

Which component must be added after an initial deployment of VMware vSphere Foundation (VVF) to provide a central location for logs collection?

- A. Fleet Manager
- B. VCF Operations for Networks
- C. VCF Operations
- **D. VCF Operations for Logs**

**Answer: D**

Explanation:

After deploying vSphere Foundation, to centralize log collection and analysis, you must add:

\* VCF Operations for Logs, which provides log ingestion, alerting, and centralized troubleshooting.

Other options:

\* B. VCF Operations# Focuses on performance/capacity, not log collection.

\* C. VCF Operations for Networks# Focuses on networking insights.

\* D. Fleet Manager# Used for multi-instance management, not logging.

VMware Cloud Foundation 9.0 - Extending VCF with Logs

VMware Docs: vRealize Log Insight Deployment

## NEW QUESTION # 63

A network failure of a host occurred in a VMware vSphere Foundation (VVF) vSphere cluster. None of the virtual machines (VMs) restarted on unaffected hosts and the VMs were unreachable until the problem was corrected.

vSphere HA and DRS are enabled, and all tests when powering off a host were successful.

What is the cause of this behavior?

- **A. Host Isolation Response is disabled in vSphere HA.**
- B. The VMs have "should run on" host affinity rule applied.
- C. vSphere DRS has not been enabled on the cluster.
- D. vSphere HA has not been enabled on the cluster.

**Answer: A**

Explanation:

In this scenario, a network failure occurred on a host, and VMs on that host did not restart on other hosts, even though HA and DRS were enabled.

\* This indicates that vSphere HA detected an isolation event (the host lost network connectivity) but took no action, because the Host Isolation Response was disabled.

\* Normally, with Host Isolation Response set to "Power Off and Restart VMs," HA restarts affected VMs on surviving hosts.

\* Since powering off a host manually triggers a restart correctly, the failure here was specific to isolation behavior.

Other options:

\* B. Affinity rule "should run on" # Would still allow HA restart elsewhere if isolation occurred.

\* C. DRS not enabled # DRS only balances load; HA is responsible for restarts.

\* D. HA not enabled # Contradicts the scenario (HA was enabled).

**NEW QUESTION # 64**

An administrator is tasked with adding a 96-core VMware ESX host to a VMware vSphere Foundation (VVF) 9.0 vCenter cluster. The vCenter has been previously licensed for 1024 cores and the existing hosts equal 960 cores. The administrator adds the host to the vCenter cluster and places the cluster back into production. What issue will occur if the administrator performs no additional actions to this vCenter?

- A. The new ESX host has been limited to 64 cores until more capacity is added to the license to license the host. Once 32 cores or greater is added to the license, the full 96 cores of the new host will be useable.
- **B. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, it is disconnected from the vCenter instance.**
- C. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, the host will be limited to 64 cores until 32 cores or greater is added to the license.
- D. No issue will occur. The new host was added to the vCenter cluster successfully and will operate for the valid period of the applied license.

**Answer: B**

Explanation:

The vSphere Foundation 9.0 licensing model uses per-core licensing.

\* Current license covers 1024 cores.

\* Existing hosts = 960 cores, leaving 64 cores licensed.

\* Adding a 96-core host # 32 cores exceed the license.

Result:

\* The new host runs in evaluation mode.

\* If not licensed after the evaluation period, the host is disconnected from vCenter.

Other options:

\* A. Limited to 64 cores # Not how VMware licensing enforcement works.

\* B. Limited to 64 cores until license upgrade # Incorrect; VMware does not partially disable cores.

\* D. No issue # Incorrect; licensing compliance will cause issues.

VMware Docs: vSphere License Enforcement

**NEW QUESTION # 65**

Which VMware Cloud Foundation (VCF) Operations for Logs capability facilitates root cause analysis and troubleshooting?

- A. Log Forwarding
- **B. Log Querying**
- C. Alerting
- D. Dashboarding

**Answer: B**

Explanation:

The VCF Operations for Logs capability most useful for root cause analysis and troubleshooting is Log Querying.

\* Allows searching, filtering, and correlating log events to diagnose issues.

\* Log Forwarding (A) # Sends logs elsewhere, not analysis.

\* Alerting (B) # Notifies about issues but does not provide investigation details.

\* Dashboarding (C) # Provides visualization, but root cause analysis requires queries.
