## Salesforce Data-Architect Exam Questions: Reduce Your Chances Of Failure

You can download a free demo of Salesforce - Data-Architect exam study material at ITdumpsfree. The free demo of Data-Architect exam product will eliminate doubts about our Salesforce Certified Data Architect PDF and practice exams. You should avail this opportunity of Data-Architect exam dumps free demo. It will help you pay money without any doubt in mind. We ensure that our Salesforce Certified Data Architect exam questions will meet your Salesforce Certified Data Architect test preparation needs. If you remain unsuccessful in the Data-Architect test after using our Data-Architect product, you can ask for a full refund. ITdumpsfree will refund you as per the terms and conditions.

### Salesforce Certified Data Architect Sample Questions (Q152-Q157):

#### NEW QUESTION # 152

Northern Trail Outfitters (NTO) has implemented Salesforce for its sales users. The opportunity management in Salesforce is implemented as follows:

1. Sales users enter their opportunities in Salesforce for forecasting and reporting purposes.
2. NTO has a product pricing system (PPS) that is used to update the Opportunity Amount field on opportunities on a daily basis.
3. PPS is the trusted source within NTO for Opportunity Amount.
4. NTO uses Opportunity Forecast for its sales planning and management.

Sales users have noticed that their updates to the Opportunity Amount field are overwritten when PPS updates their opportunities. How should a data architect address this overwriting issue?

- A. Create a custom field for Opportunity amount that PPS updates separating the field sales user updates.
- **B. Change Opportunity Amount field access to Read Only for sales users field-level security.**
- C. Create a custom field for Opportunity amount that sales users update separating the field that PPS updates.
- D. Change PPS integration to update only Opportunity Amount field when the value is null.

**Answer: B**

Explanation:

Changing Opportunity Amount field access to Read Only for sales users field-level security (option C) is the best way to address the overwriting issue, as it prevents sales users from updating the field that is controlled by PPS, and ensures data consistency and accuracy. Creating a custom field for Opportunity amount that PPS updates separating the field sales user updates (option A) or creating a custom field for Opportunity amount that sales users update separating the field that PPS updates (option D) are not good solutions, as they may create confusion and inconsistency with the Opportunity Forecast feature. Changing PPS integration to update only Opportunity Amount field when the value is null (option B) is also not a good solution, as it may cause data loss or conflicts with the sales users' inputs.

#### NEW QUESTION # 153

Cloud Kicks stores Invoice records in a custom object. Invoice records are being sent to the Accounting department with missing States and incorrectly formatted Postal Codes.

Which two actions should Cloud Kicks take to improve data quality? (Choose two.)

- A. Change each address field to required on the Page Layout.
- B. Write an Apex Trigger to require all fields to be populated.
- **C. Utilize a Validation Rule with a REGEX operator on Postal Code.**
- **D. Utilize a Validation Rule with a CONTAINS operator on address fields.**

**Answer: C,D**

#### NEW QUESTION # 154

Universal Containers (UC) is migrating from an on-premise homegrown customer relationship management (CRM) system. During analysis, UC users highlight a pain point that there are multiple versions of many customers.

What should the data architect do for a successful migration to mitigate the pain point?

- A. Hire an intern manually de-duplicate the records after migrating to Salesforce.
- B. Have the users manually clean the data in the old system prior to migration.
- **C. Store the data in a staging database, and de-duplicate identical records.**
- D. Migrate the data as is, and use Salesforce's de-duplicating feature.

**Answer: C****Explanation:**

Storing the data in a staging database and de-duplicating identical records (option D) is the best solution for a successful migration to mitigate the pain point, as it allows the data architect to identify and merge duplicate customers before they are imported into Salesforce. Hiring an intern manually de-duplicate the records after migrating to Salesforce (option A) is not a good solution, as it may be time-consuming and error-prone, and it does not prevent duplicate records from being created in Salesforce. Migrating the data as is and using Salesforce's de-duplicating feature (option B) is also not a good solution, as it may cause data quality issues and conflicts, and it does not address the root cause of the duplication. Having the users manually clean the data in the old system prior to migration (option C) is also not a good solution, as it may be unrealistic and impractical, and it does not leverage any automated tools or processes.

**NEW QUESTION # 155**

Universal Containers has provided a web order form for its customer and has noticed invalid data coming in on orders.

What should be used to mitigate this problem?

- A. Validation Rules
- B. Formatted Fields
- C. Work Flow Rules
- D. Apex Trigger

**Answer: A****NEW QUESTION # 156**

Northern trail Outfitters (NTO) runs its entire out of an enterprise data warehouse (EDW), NTD's sales team starting to use Salesforce after a recent implementation, but currently lacks data required to advanced and opportunity to the next stage.

NTO's management has research Salesforce Connect and would like to use It to virtualize and report on data from the EDW within Salesforce. NTO will be running thousands of reports per day across 10 to 15 external objects.

What should a data architect consider before implementing Salesforce Connect for reporting?

- A. Maximum external objects per org
- B. Maximum page size for server-driven paging
- C. Maximum number for records returned
- D. OData callout limits per day

**Answer: D****Explanation:**

According to the Salesforce Connect Reporting blog post, one of the considerations for using Salesforce Connect for reporting is the OData callout limits per day. The blog post states that "Salesforce Connect has a limit of 100,000 callouts per day. This limit is shared across all external data sources in your org. If you exceed this limit, you will receive an error message and no more callouts will be allowed until the next day." Therefore, a data architect should consider this limit before implementing Salesforce Connect for reporting.

**NEW QUESTION # 157**

.....

No matter you are a company employee or a student, you will find that our Data-Architect training quiz is priced reasonably to afford. Though the price is quite low but the quality is unparalleled high. We own numerous of loyal clients that constantly bought our Data-Architect Exam Braindumps and recommended them to their friends, classmates or colleagues. Besides, we give discounts to our customers from time to time. Lots of our customers prised our Data-Architect practice guide a value-added product.
